>them incomplete in some way...

Yes, there are!! I have found three so far and all of them are
incomplete. I have been able to get the one from TOAD at least runnable,
but it is obvious now that the missing insignia folder is needed for
complete operability.
There is one on the "toxic" bbs in sweden that is even more
incomplete, and peculiarly its softpc.prg is 1.2 MB large! (compared to
245k for the one in toad)

Not sure what the legalities of the situation are, since softPC
for most systems is a commercial product. The Atari version is only an alpha.
And it was never officially released. I am going to ATTEMPT to contact
insignia, and see if they can clarify their position on it.

As for the Lynx and the Portfolio they were both developed from other
companies. Everything the Tramiels did, was to buy the rights and to
sell them under the ATARI brand name. There were no improvements done by
ATARI.
So if the Tramiels hadnï¿½t bought the systems other companies would have
done this.

I would say, it is more or less unnecessary to translate it, because its
useless (but thatï¿½s my opinion).

> get more translations done in the near future - I certainly hope so. David

Well, I hope that too, because the ATARI is too good to be thrown away
just because the users canï¿½t use the good software that is available for
our system.

> f> I am not able because my English is too bad
> Not so bad.

Perfect. Anyway, there is a new program called Arthur, that can be used
as a German<->English dictionary. I donï¿½t know if it is really usefull,
but give it a try.

5413. NEW HASBRO NEWS!

Newsgroup: comp.sys.atari.st
Date: 1998-03-16 00:00:00 UTC
From: james.burr@acpu.com
Message-ID: <890066849@acpu.com>
Source record: 105428

It's 9:30 a.m. Pacific Standard Time here in Idaho and I just watched a report about the Hasbro purchase of Atari on the Bloomberg News Network (they report financial news mainly). They confirmed the purchase of Atari. They reported that Hasbro has plans to re-release newer versions of the older games that made Atari famous to the PC market as well as others starting with Centipede and others this fall. It was a 40 second report of Atari's history in the gaming market and Hasbro's intentions. Now that this deal has hit the mainstream financial news we can expect more data later!

I wish them luck and this gives not only Hasbro but us a chance to revive the name Atari. I have quite a few very good ideas for brand new revolutionary games that could make Hasbro's Atari an industry leader again!

Later,
James

r> CAB 2.5 and Nova VDI 2.61 (with or without Geneva). I've viewed some
r> pretty big animated GIFs, too.

I haven't ran across that specific problem on my MagiC Falcon, but I do lose
memory over time with CAB. And I'm not talking about memory being used by
the graphic cache. I've never ran out of memory while using it, but my used
graphic cache gets smaller and smaller over time, along with my system
available memory, when in actuality, the used graphic cache should get larger
as system memory gets smaller. The only way to get it back is to quit CAB
and then reload it, and even that usually doesn't work if I'm using I-Connect
(I have to quit it, too).

Hasbro bought Tiger because of their excellent position in children's electronics. Tiger makes tons of handheld games, including all of the game show units (Wheel, Family Feud, Jeopardy!, etc.), Giga Pets, and the children's educational "computers" (they are the only real competition to V-Tech). Hasbro is trying to keep up with Mattel in the toy industry; both are running around buying up all of the smaller toy companies that complement the businesses that they already own. Tiger was attractive to them because they really don't have anything in the way of handheld electronics or kid's computers. They also got ahold of the game show licenses, which their other divisions can use, like Parker Brothers, Milton Bradley, and CAP Toys (candy - you've probably seen the Connect Four and Monopoly candy...expect more!)

Tiger was also bought by Hasbro, Inc., while Atari was purchased by Hasbro Interactive. This may mean nothing, but it may signal that Tiger is considered more of a toy company to Hasbro, while Atari is considered

more of a software company. I personally would expect HI to use the software licenses first, making new versions of the titles that they now own, then maybe look at the videogame market to see if it is a viable market for them. They don't own facilities to make something as large as a CD console system and would not be able to make one as cheaply as someone like Philips, but they might license the Atari name. The portable market is about to change a bit with the new Nintendo color portable, so if they're smart, they will wait and see what happens there. Just my $0.02 (still $0.02 with tax!!)

> you have no memory left! :-((

I tried it just now, and you're right, it eats up all available
memory. It just took a minute, but fortunelately all memory was
released when CAB was quitted. This could be either a bug in Nova VDI,
a bug in CAB or a combination of both.

I don't have any other programs that use offscreen bitmaps, so it's a
bit difficult to test it.

BTW. this was with Nova VDI 2.64, NVDI 4.12, N.AES 1.1.7 and MiNT
1.14.6. I will try again later with earlier versions of NVDI, without
NVDI etc.

> I don't like the tramiels.
> (From the first day he put his thick fingers into atari)

That is an all-too-common theme of many of these messages, but lets be realistic here. Granted, the Tramiels marketing blunders obviously doomed TOS to eventual failure in the marketplace, but without the Tramiels, Atari would have been dead and burried in 1983 after Warner Communications ran the company into the ground. Without the Tramiels, there would have been _NO_ Atari 130XE, 520ST, 1040ST, Portfolio, STe, MegaST, SLM804, MegaSTe, SLM605, TT030, Falcon, Lynx, Jaguar, etc.

As frustrating as all the Tramiel's marketing blunders obviously are to us diehard Atarians, keep in mind that without them, we wouldn't even have had any of these incredible systems. Because of these systems, we Atarians were able to enjoy user-friendly operating systems and software a full decade ahead of the rest of the personal computer industry, and a reliable, frustration-free operating system that is still unequalled even by today's most current systems.

>

Think about it, Tim. What you you do if you were in charge of Hasbro's decision making team. There is no longer ANY Atari dealer network, NO major software developers still supporting the platform, no name recognition of Atari or TOS in the personal computer marketplace, and no serious demand for any non-Windows system from the average consumer or merchandiser. Reviving the Atari TOS computer system would involve starting from scratch as a totally new computer platform as far as the marketplace is concerned. And in 1998, the personal computer marketplace has CHOSEN an industry standard (irregardless of how bad that standard may actually be, Windows _IS_ the industry standard). What do you realistically think the chances are for a new operating system to come out of nowhere to topple Microsoft's grasp on the industry at this time?

By the way -- I'm still using my trusty old TT030 systems and MegaSTe for most all serious applications also; only use this miserable Win95 system I have at home primarily for Internet access only.

As with any computer, storage of your ideas, as well as having media for quick and handy access to your your most-used programs and files, is a must for efficiency and time. And now, thanks to lower prices and improved technology, even the oldest classic Atari computers can take advantage!

At the March 18th TAF meeting our focus will be how to build your own SCSI-based hard drive in a PC case - we'll show you the parts and software you need, where to find them, and how to configure and put it all together. We'll also discuss the variety of options to hook up to your new SCSI system, including CD-ROM (did you know that at last count there are over 50 Atari-specific CDs to choose from?), removable media like ZIP and Syquest drives, tape streamer drives, and even flatbed scanners!

If you're still booting from floppies, your original Atari-specific hard drive is wearing out, or have ever been curious about how a hard drive system can give your classic Atari improved usability, this meeting is not to be missed! See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

I'm not sure about the Lynx. It was a horrible mess when Atari got it
from Epyx. No where near production and suitors were limited.

5428. ZIP Plus

Newsgroup: comp.sys.atari.st
Date: 1998-03-17 00:00:00 UTC
From: shammond@loop.com
Message-ID: <6ekos0$70s$1@usenet53.supernews.com>
Source record: 105191

The ZIP Plus works just fine with my TT. My current configuration on the SCSI port is:

1) SyQuest connected to the TT
2) NEC CDROM connected to the SyQuest
3) SCSI ZIP connected to the CDROM
4) Leg bone connected to the.....

Because of the different types of SCSI connections I was not able to replace my current ZIP with the Plus. So this is the configuration I used:

1) ZIP Plus connected to the TT
2) SyQuest to the ZIP Plus
3) CDROM to the SyQuest - The problem in all of this is the CDROM as it has those @#$% micro 50 pin SCSI connectors. The SCSI "in" on my ZIP is a 25 pin female while the SCSI "in" on the ZIP Plus is a 25 pin male.

When you purchase a ZIP Plus it comes with its own "Autodetect" cable. The computer end of the cable that came with one I brought home from work has a standard Mac/Atari SCSI connector.

Everthing fired up with out a problem. Keep in mind that this is with a TT that has never had a problem with anything related to SCSI :). Using a Link/Link2 or other ASCI/SCSI convertors might not produce the same results. If you have a ST/Mega ST/Mega STe, my suggestion would be to connect the ZIP Plus directly to the convertor. As with the regular ZIP the Plus only has SCSI positions 5 and 6 available. Unlike the normal SCSI Zip there is no "termination" switch on the back. Not having installed the ZIP Plus at work and not having read the manual <VBG>, I really don't know if the unit has auto termination or if there was an external termination resistor supplied. If someone really wants to know I could be persuaded to find out.

So, for right now it looks as if the little devil is useable on at least on type of Atari computer.

Regards,

Steve Hammond

5429. Hasbro speaks!

Newsgroup: comp.sys.atari.st
Date: 1998-03-17 00:00:00 UTC
From: robertm@jagunet.com
Message-ID: <350e0a3d.779599@news.jagunet.com>
Source record: 105192
Cross-posted to: rec.games.video.atari,comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st

This just in from Next Generation Online:

"From the first time today, Hasbro Interactive officially announced
its acquisition of key Atari videogame licenses. The assets purchased
by the company include games such as Centipede, Missile Command, Pong,
Breakout, Battlezone, and Tempest. For only $5 million the company
scooped up the rights to more than 75 Atari properties and hardware
platforms.
Hasbro currently has plans to develop several of these games on both
the PlayStation and PC. The first of these titles scheduled for
release will be Centipede, which will hit both platforms this fall.

"These ground-breaking games helped pioneer the videogame industry,"
Tom Dusenberry, president of Hasbro Interactive said. "We intend to
bring these classics back to life by updating them with the latest
technology and interactive game design, while preserving their heart
and spirit."

The company is also considering development of these titles on the
Nintendo 64, and will likely develop handheld versions of these games
via the Tiger Electronics division it recently purchased. At $335
million, the acquisition of Tiger's electronic division was costly,
and Hasbro will likely use its newfound licenses to shore up some of
the purchase costs."

====

So it appear Hasbro bought Atari for the games. I kinda hoped they
would have annouced that they would use the Atari brand name for the
games. Who knows, maybe they will. I'm happy to see updated classics
but I can't help be just a tiny but dissapointed. Time will tell.

I have an Atari Mega4 ST and want to connect to the Internet.

I have no idea where to start. Can some kind soul point me in the
direction of any HOW-TO's or FAQ's that might be on the net somewhere?

PS I can access the net via another system in the meantime!

Ends up it's a Nova problem: when I run in monochrome mode Infitra
intializes correctly. I managed to send to e-mail with it, too (very nice
mailer, besides what's either missing or crippled). I've just received
e-mail from the program's author stating I should update my Nova VDI.
Somehow I think it's the other way around, though, as the icons in My
Mail and CAB look fine regardless of the video mode.

Infitra doesn't like my VDI. In monochrome mode I was able to send e-mail just fine, but receiving them didn't work at all. Everything showed up in the e-mail tests (header, body, and signature). Forwarding worked, too.

Initially I was using 256 and 65k modes but had better luck with
monochrome. In 24-bit mode Infitra initializes correctly but the screen
has lots of garbage.

Well, perhaps there's a problem and I don't notice it. But I've
experimented with my own animated GIFs, including very large ones, and I
see no sign of memory problems whatsoever: I can let them play and play.
To keep track of memory I use NeoDesk, which seems to update memory usage
correctly.

What I'd really like to do is try the latest Nova VDI, but the one
available from your pages doesn't seem to work for me. Although
sta_vdi.prg boots fine, my TT crashes well past the auto folder stage, so
I think it has something to do with my version of nova_col.acc (1.70).
Unless it's just not meant to run on my Nova Plus.

Has anyone successfully updated their Nova VDI? There was talk of this
some weeks ago, but I didn't read one post that said they actually got
the newer VDI to run.

As I said, I don't experience this strange problem. My setup is Nova VDI 2.61, NVDI 3.02 (screen drivers disabled), the latest Geneva/NeoDesk, and CAB 2.5d... all this on a TT with TOS 3.06. Atari users, as you know, are well-known for varying setups, so this may make tracking down a bug like this all the more difficult.

That is EXACTLY what they will do. Anyone notice the popularity of the rerelease of Frogger for Playstation and PC? Hasbro is going to revamp and rerelease some of the old Atari games like Missile Command in similar fashion. I wouldn't expect to see a new atari-branded console from them, though. Read more in today's Wall Street Journal, by the way. Good story about the deal that even mentions retrogaming's current popularity (it talks a little bit about the MAME arcade emulator in there).

Atari manuals were never that good and mainly contained info on how to use the desktop, where to plug what, and all sorts of bad port pinout shecmatics.

Nothing you can't figure out by yourself or find on the net.

Maybe you can contact Best Electronics in the US, as they seem to have a stock of these sorts of things, parts, etc...

Cheers,
Nick

The version of Infitra I downloaded last week works OK for me, although
it's very unstable. I did manage to download and read my E-Mail though.
I noticed yesterday that there is a newer demo version, perhaps you
could try this.

Regards,

Ben Hills.

STinG will provide your MSTE with TCP/IP and is available from:
http://www.stud.uni-hannover.de/~perot/index-e.html

There is currently no NFS driver for STinG (well not that I know of) but
you could use FTP to transfer files around your Network.

Regards,

Ben Hills.

Nor a floppy disk drive :-)
Let me clarify my statement about "cheap" design. The ST family of home computers was not revolutionary: basically it was just a 68k computer running a modified version of Digital Research OS. The software was not new. The concept was not new either (Apple Lisa and Macintosh were the first commercial implementation). The hardware was not new (Motorola 16/32 bits microprocessors were first introduced in 1978 if I recall correctly). What really made these computers interesting was the price. Thus, it was the cheap design that made their commercial success.

At the time, Sinclair had been producing a multitasking (even if it was just task switching, really) computer running a windowed environnement on a Motorola 68008 (8/16bits microprocessor). The machine had its share of problems (mostly production) but it was more or less an ST-like, only introduced years earlier. It was low-priced, too.

The Amiga had just been introduced. It was basically the same design as the ST, only with the technical edge given by the specialized ASICs and the true multitasking environnement. (Jack Tramiel's) Atari had forked $1 million (or was it 10?) to help it's development. Commodore offered more money than Atari (by an order of magnitude) to buy the design. This other Atari failure forced them to create the ST.

> I suspect that what happened with the ST is that since Amiga was slipped
> out from under Atari by Commodore, they wanted to have a product to
> compete, and wanted to get to the market at or before the Amiga made it
> so that they would have a fighting chance.

Yes exactly. But Atari didn't ever catch up with the Amiga technology. It had it's share of success (mostly due to the popular MIDI interface and cheaper price tag at the begining of the ST life), but the Amiga became slowly more popular after the Amiga 500 was introduced.

The point I'm trying to make is that, for the first two years, Atari sold a lot more STs than Commodore sold Amiga. They had the money to evolve the ST and to create radical new designs. They had the market advantage. They didn't use it to get the technological edge. They just created cheaper designs when they were in the position to revolutionize the computer industry.

No hard disk driver detects CD ROM drives automatically. This is because
no hard disk driver can drive CD ROM drives on its own. You always need
a CD ROM driver.

> Kinda strange that under HDDriver you can't *install* Metados from CD-tools,

Of course you can. There are lots of users running MetaDOS/CDTOOL and
HDDRIVER.

I still belive that it's MILES better to atleast _have_ a translated _program_
even if the manuals (textfiles?) area still in german, french whatever. A short
readme file in english will often be enough.

Certainly the last time I had lost cluster problems it was on drive F (where I keep Newsie). I notice also that Newsie cannot keep an accurate record of the number of postings in a newsgroup. Before it shows the overview it records about 13000 but after it records about 1700. Also sometimes on closing a window nothing will then respond to the mouse or keyboard short cuts.

I don't want to lose my contact with the Internet but Newsie seems unstable.

Hmmm... when you are at it, I must say that I did not have any problem before either with MagiC. Anyway, with Nova and NovaVDI you will get into troubles in modes above 256 colours. The colours in your colur icons will be a mess.

There _definitly_ is a problem with CAB. I'm not sure if it has to do with
NovaVDI or CAB, but if you view a animated GIF you soon will get into
troubles. It doesn't matter if you use TOS or MagiC the problem is still there
and it's a MAJOR problem. Under TOS the complete system locks up after a
while.

Try to load a page with a animated GIF into CAB. Then open XControl and open
a CPX which shows how much memory you have free. Now close and open
the CPX and wait a while between you do it. You will now see an interresting
thing..... your memory slowely disapears! Under TOS it will mean a disastrous
system crash after a short while, MagiC handles it much better.

One interresting thing to notice under MagiC is that it's CAB it self which
grows bigger.... and bigger.... and bigger so maybe it's a bug in CAB?

This is with NovaVDI 2.66

Yup, try to load a CPX or something which shows how much memory you have
left and take a look at it now and then.

Well I find this strange. One thing is that I use the demo of CAB 2.0
so maybe it's CAB which causes the problem. The OS can't have anything
to do with it as it's the VDI which is used in this case.

Does Alexander know anything about this??

I have also experienced lost clusters and bad sectors. I run a 14 Mb
"nemesised" falcon. My biggest partition is just 145Mb, (on a 720Mb
Micropolis SCSI II disk) but my problems always is with the boot
partition on the internal ide-drive c and d partition.

I have seen some people have suggested Newsie! Is that possible?
I do not have any good reason for my hd-problems at all. I tried to
install bigdos to get another 1gb disk up and running for
hd-recording, but it trashed my c-partition all togheter ... or did it
happen when I tried to clean up old news-messages in Newsie...
i have not deared to try bigdos again

5460. JTS HAS SOLD ATARI!

Newsgroup: comp.sys.atari.st
Date: 1998-03-17 00:00:00 UTC
From: dave.lee@ftn.org
Message-ID: <794_9803170311@tor250.org>
Source record: 105223

Rumours.... if you haven;t heard a good one by 10 O'Clock, Start one.
That is precisly what is happening with the JTS Sale of the Atari name.
Realize that JTS had no use for the Atari patents and licencing and could
use the cash to impact their bottom line and core business, which happens
to be hard drives, not computers, and it becomaes apparent that JTS sold
the Atari name, patents and licensing for the money and Hasbro bought them
for bargain basement prices which will more than likely gain them 30-40
million over the next few years in licensong agreements alone.

Never mind the wishfull thinking of 'die-hard atarians', Hasbro didn't
get any hardware (that was sold off long ago), they got the Atari name
(still a viable name in the business), patents on all the obsolete
computer systems, licensing of whatever Atari stuff that JTS had left,
and that is all they bought. It's the licensing of TOS, the code, the
olde games, etc., that will gain Hasbro their money back.

If they do anything else with it fine, but to say that the "Phoenix"
will re-arise out of the fire, yet again, is a little premature.

If you want to read about the "wishfull thinking" that some "Dweebs"
seem to think will happen, read the COMP.SYS.ATARI.* Newsgroups that
this board carries (Bases 30 on up). In the total scope of Big Business,
the JTS sale of the Atari name, etc, to Hasbro, is a non-event.

Similar problems to mine. On my side it did receive messages ok, but
the sent ones did only contain a couples of lines - and not the hole
message!

The strangest thing happened when I tried to send the author a mail
by using the "relations". I made a short notice, qued it AND IT MADE A
FILE THAT FILLED UP THE PARTITION 102MB BIG!!! and nope! I did not try
to send it :-/

I dont dare to try it for a while - until it is upgraded. Looks nioce
though.

I suspect that it may be a memory fragmentation problem. If the
applications that you run in some multi-tasking systems don't clear the
allocated memory correctly they'll try to find the next block of memory
big enough for the new application. This tends to 'bubbles' in your
memory that can't be filled by applications larger than the fragmented
memory. The result of this problem appears as less system memory
because of those voids.

I don't know what kind of OS you are using but the Geneva manual I read
explained this thoroughly.

5464. [FREEWARE] Eureka 2.12 2D Graph describer 3D modeller

Newsgroup: comp.sys.atari.st
Date: 1998-03-17 00:00:00 UTC
From: LE COAT Francois <lecoat@ief.u-psud.fr>
Message-ID: <350E5495.21590F0B@ief.u-psud.fr>
Source record: 105227

Hello everybody,

I have released the March revision of my program Eureka 2.12.
It's designed to draw graphs and surfaces in 3D. It exports
various 3D formats including VRML 1 and 2. This program is
tested on various ATARI platforms and emulators and is
developed on my HADES 060. It is available on my home page
at :
http://www.ief.u-psud.fr/~lecoat
and on karl SAMYN's FTP at RMA (Belgium) :
ftp://193.190.205.13/archive/atari/
on mathematics directory.
Karl is maintaining the English documentation, and a new
revision is available till now, every month on both sites.
If you have any remark, I would be interested.
This program is also ditributed under Cyberstrider scheme.
Have fun with it.
Regards,

-- Francois LE COAT

Source record: 105229
Cross-posted to: comp.sys.atari.st,rec.music.makers.marketplace

Hello, this is a very cool system for sequencing:

------hardware---------
Atari 1040STf
2.5 megs of memory
SM124 monitor (b/w)
mouse

------software---------
NVDI 2.5 (speeds up the ST)
Cubase 2.0 (very reliable)

------remarks----------
The ST is painted in a chrome silver finish.
The mouse works, but could be replaced.

When it comes to sequencing, Cubase on the ST would be my 1st choice for anyone on a small budget. This system works fast, and I've used it here as a secondary system for 2 years. I also developed extension for Formula (Forth Musical Language) on this machine, which I can include. Other software is available for free also, if needed.

------price------------
any offer under $100 will be entertained.

: That simply isn't true. The Atari ST was a cheap design. It was designed too
: quickly with no real innovation (try to think about the Sinclair QL, which
: was almost the same design and was produced 2 years before, or about the
: Amiga which was first introduced as a prototype a whole year before the ST).

Absolutely. The ST and TOS were designed, built/programmed within one year.
The guys from Atari just used a user-interface written by Digital Research
for the PC and wrote a kind of MS-DOS-emulator they called GEMDOS.
The Amiga for instance was far superiour both in hardware and in software
design. The Amiga OS was fully pre-emptive multitasking, had dynamically
loadable libs (or something like it), etc, etc. The hardware for graphics
and sound was also a lot better (DMA stereo sound, hardware sprites, fast
blitter, more colours...)
The main things that made the ST series still sort of a success were the
built-in MIDI ports, the ability to use a nice monochrome-monitor and maybe
the MS-DOS compatibility (diskwise)...

Your news server won't have _every_ message posted to comp.sys.atari.st
availble for reading. You can only go back so far before the article
numbers aren't accessible. I've done tests with both my news servers to
see how far back their postings go -- they bottom out pretty quick.
NEWSie's default is the most recent 1000 articles, but I would be lucky
to get that. 1700 is the number of articles your server had for that
newsgroup (the rest were most likely deleted for workspace reasons).

>I don't want to lose my contact with the Internet but Newsie seems
>unstable.

Create a small partition for offline use. I have one for CAB's cache and
NEWSie's offline path. If you haven't done so, it also wouldn't hurt to
add NNTP_HOST= to STinG's default.cfg file. Server problems can
exacerbate things in NEWSie (or any other client)... this cfg addition
might help (perhaps you've already defined it).

Perhaps the best way would be, if System Solutions or any other vendor
that is responsible for translating supplied the latest English version
of the software and the latest German version (without manuals only the
disk) for all of those who want to get the latest features and are
familiar with the program (or can use the older English version to
become familiar with it)?

Charles, you have hit the nail on the head here! Well done for
pointing this out...

What Atari developers and resellers have to realise is that they have
to provide services for the buying public rather than thinking that
they are doing the Atari public a favour by being
resellers/developers. It is a buyers market out there and people will
go with the option they feel comfortable with and speed of receipt of
goods - hence the reason why places such as PC World/Tempo etc are
still doing roaring trades.

There are comments in this thread that the Atari forms are small - but
so what? are these Atari forms not also trying to compete in the PC
and Mac Markets too? Such as Woller, ASH, System Solutions, Titan etc.
So should they not compete on similar levels? The competition are
doing on-line business.

An Atari firm not selling on-line anymore is not an acceptable
situation anymore. This also does not mean that they totally stop
their current mail-order business - Making a profit and having less
overheads - I am sure is what most companies want and moving to
on-line transactions is the best way so far...

Regards
Danny

No, it's a problem with NovaVDI.

> One interresting thing to notice under MagiC is that it's CAB it self which
> grows bigger.... and bigger.... and bigger so maybe it's a bug in CAB?

No, CAB does not allocate any additional memory while playing animated
GIFs. It's the NovaVDI that allocates memory, but never releases it.
Of course the memory belongs to CAB because CAB calls the VDI, but
it's a bug of NovaVDI not to release the memory which is allocated
and used internally.

I ordered a 2.1 GB IDE drive for my Falcon. I normally use MagiC 5.11 but occasionally will do something in TOS.

I'm thinking of having one of my partitions as large as 1 GB, for storing multimedia and demos. Is there any reason why this might not be a good idea? Will Optimizer handle partitions that big?

Also, I plan to increase my CAB disk cache to at least 100 mb. Is anyone using a cache that large or perhaps even larger? I'm wondering if it will start slowing down too much, due to the number of files in each cache folder. I'm presently using a 20-30 mb cache (depending on free space) and it just doesn't do the job I want it to.

Unfortunatly I think using the Atari name would doom any product
released. Most of the gamers out there still have bad memories of
ATARI. Need I mention E.T.? or the Jag? I like my Jag I still play it
but because Atari screwed it up it is now dead. So any use of the
Atari name could prove fatal for any system, no matter how good it is.

Try this URL:

http://www.excelprinters.com/test_mem.htm

On the page is a somewhat large (384x304) animated GIF I quickly did up
with WhirlGIF. With Nova VDI and CAB 2.5, I can have this simple seven-
frame animation run forever without a sign of losing memory.

If you viewed several animated GIFs without losing memory then this could
be related to what 'kind' of animated GIF is being viewed... perhaps some
applications create them differently. All this is just a wild guess,
though <g>.

On 17 Mar 1998, Alexander Clauss wrote:

>No, it's a problem with NovaVDI.

But not Nova VDI 2.61. Subsequent versions of the Nova VDI had changes
"... of the offscreen interface EDDI..." according to the exact words
of Gerhard Huber. I've just learned this after inquiring about the
differences between 2.61 and 2.66. This would explain why I don't have a
memory problem with CAB.

Terry,

> I ordered a 2.1 GB IDE drive for my Falcon.

The Falcon's internal hard drive is one of the tiny 2.5" mechanisms. Are you certain that is the size you ordered, not a 3.5" drive? You can connect any size external SCSI hard drive to the Falcon's external SCSI port.

r> viewed... perhaps some applications create them differently. All
r> this is just a wild guess, though <g>.

Actually, I don't think my losing memory problem is related to animated GIFs
at all, especially after reading about the fix for Nova users. I think we're
talking about two different issues.

I guess the next step is to load MemWatch and see if the problem is memory
fragmentation.

sw> 3.5" drive?

Yeah, I ordered a 2.5" notebook drive. They go rather large in terms of storage capacity these days. Not as much as 3.5" drives, but much larger than 2.1 GB.

sw> You can connect any size external SCSI hard drive to the Falcon's
sw> external SCSI port.

True, but then you have to deal with the Falcon's buggy SCSI port, not to mention the fact that it ties up your SCSI port (unless you have a passthru on your hard drive or CD-ROM or whatever -- I don't).

That sort of logic implies that Sega may as well just slose shop today, since their last two major products also died off quickly. The Atari name is still seen favorably - I can't count the number of times I have had to explain to people that the Atari in the arcades is NOT the Atari that made the Jaguar. And the retro gaming thing has heightened the perception of Atari as well.

This sale is getting mainstream news exposure. If the Atari logo appears on a new piece of hardware, the gaming public will know that it is "under new management".

Besides, I really don't think the majority of people out there is stupid enough to simply say "Atari? everything they make sucks" without first finding out what is going on. If Hasbro spends the money on good marketing to generate some positive hype, and on making some good games for any new hardware they make, then the Atari name will once again be embraced by the public. (Hey, Ford bounced back from the Edsel and the Pinto, didn't they?!?)

k> Thanks to all who have posted follow-ups or replied by e-mail. Thus
k> far, I have to report that ESS-Code still refuses to decode the files
k> in question.

In that case it may be that you have an incomplete header for the file. there
are several lines that usually prefix the data - if you don't have them
that'll be the reason.

To be absoluely sure, I tend to save the file out giving it a filename ending
in .MIM which includes the header and run that through ESSCode. It either
works or I have to re-examine the header to find what's holding it up.

>> As for .exe - either you need a PC and Windows95/NT to run it, or
>> you simply rename the file to a .lzh (some Europeans change the

k>
k> Regarding .exe extensions, changing them to lzh doesn't seem to be
k> the answer - I get:"This isn't an lzh file or is a damaged lzh file!"

In that case, quite simply, it isn't an LH file B^{)

What makes you think it's a packed file? If it's an executable (ie the PC's
version of a PRG file) then it'll only run on a PC. There's no way around
that...

What form does this display bug take? I have a problem when using 1st Guide
in 256 colours (the screen palette remains changed after exiting from display
of a JPG) but I didn't relate this to MagxDesk. Imagecopy changes the
desktop colours as well while displaying but resets them on exit.

More info please...

If it is an STe it has simm slots.. You have to pull the clips that lock
the simms in and just pull them out.. You should be able to tell if they
are soldered in or not. I'm pretty sure that all the STe' came with
simm slots.

Fer sure it does.

>Can anybody remeber anything about ODIN?

Yes, I've seen one on the Atari Fair Duesseldorf in '91 or '92. It was simply plugged between ST and VGA monitor and did contain some logic to decypher signals coming from the ST and show them as VGA screens.

From what I heard, it was quite slow and did not sell.

Frank.. what are you saying?

I have been around on the Internet since 1989 - and used my Atari in
conjunction with the net since 1991!

How can you explain the popularity of places such as HENSA/micros,
terminator (atari.archive.umich.edu) and other ftp sites around the
world, way back in 1989/90?

TCP/IP packages such as KA9Q have been around for years and Steve
Adams STiK has been around since 1995

The internet is the way to go, dude. :)

>I understand what you mean, but I don't believe that is enough profit in

Nope.

```
You can however try using a monochrome emulator, such as Sebra, but it's
a pain for the eyes, and slows down the system probably too much
for timing-intensive apps like Cubase.

Get a used mono monitor for cheap, you'll never want to go back to med-
res after that.

>without corroboration?

Lets see... The story is from, I believe, Video Games and Computer Entertainment. When Atari came in, the Lynx was still nothing but a bunch a hand wired boards connected to an Amiga. Nothing was done in the way of prototypes, figuring out battery usage, nor where to get color LCD screens. Atari originally was just helping Epyx out with the idea it was going to be join project but once it appeared that the project wasn't going fast enough, Atari bought the Lynx from Epyx out right and finished the project.

I'm looking for "Cyber" stuff that was put out for the Atari ST by
Antic a long time ago. The titles I remember are:

Cyber Paint (I already have version 1)
Cyber 3D
CyberStudio

other?

If you have any of these programs for sale at a very nominal price,
or are interested in trading for some other software for your Atari,
please reply.

Thanks in advance for your response.

Amiga was a 16 bit equlivent to the 8 bit 800. Both designs involved
thework of Jay Minor, he pushed for a 16 bit design. Amiga development
stalled
because projections showed that the cost of completing the development
was too high and simply no one was willing to risk taking the plunge.
The Amiga wasn't "slipped out" from under Atari, it sat idle for a
significant
time. Jack Tramiel brought the design for the ST. with him from
Commodore
and that is what Atari developed. The Amiga company was later acquired
by Commodore and development was completed. Initially Commodore withheld

information about the operating system to insure their ability to
maintain
control over the computer, but this had the undesirable effect of

slowing
sales due to the small software base.

> they were in the position to revolutionize the computer industry.
>

The Tramiel philosophy was "Power without the price" Tramiel wanted to
bea business success not lead the technological front. Again he said
"Business is war!" I don't necessarily agree with this philosophy but
that is how
Atari was handled.

5510. FS(UK): Atari Mega One, SM124, 40MB Harddrive

Newsgroup: comp.sys.atari.st
Date: 1998-03-17 00:00:00 UTC
From: Michael Clemmetsen <m.clemmetsen@sunderland.ac.uk>
Message-ID: <350E9071.8A248478@sunderland.ac.uk>
Source record: 105350

Hello All,

Now that I have everything running OK on my (new to me) Falcon.
I have decided to part with my trusty Mega 1. I would like to sell
all the hardware detailed below as one package. I can arrange
delivery anywhere in the UK, but would prefer to sell in person
so that the buyer can see the goods working and take them away
him/herself. I live in Newcastle upon Tyne. If you don't get a
reply by email within one day, could you phone me on
0191 285 0662 as this means that my modem connection has not
been working reliably.

I am looking for offers in the region of 200ukp for the whole package.

Michael
email:m.clemmetsen@sunderland.ac.uk

**Details Follow:

* Atari Mega ST Featuring (as if you didn't know):
separate CPU and keyboard, blitter chip, TOS 1.04,
VME expansion bus (e.g. for a graphics card).
Including original Atari mouse (though you'll have to be a real
purist to use it!)

Originally with 1MB surface mounted RAM:
upgraded with Frontier Extra RAM to 4MB.

Autoswitch Overscan hardware modification fitted. This provides up to a
704x496 resolution (if I remember correctly) when used with the SM124.
This can be switched on or off with the accompanying software. You can
create a list of programs that do not like the extended resolution and
the software automatically switches the Overscan off when you run an
incompatible program. The screen has occasionally been less stable when
running Overscan so you should consider it as an optional extra. There
are no problems at all without Overscan running. That is you should not
worry about the installation having damaged the Mega 1, it is the
Overscan itself that is faulty. I bought the Overscan from Compo shortly
before they went bust so I was unable to get it changed.

* SM124
Atari branded monochrome monitor displaying ST High (640x400):
72MHz refresh rate, very solid and stable image.

* Quantum 40MB Harddisk
Housed in Gasteiner metal case with integrated power supply and
ACSI to SCSI adapter. Plugs straight in to the DMA port on the Mega.

Currently partitioned with a 10MB boot partition (drive C:) and a
30MB data/apps partition (drive D:) for maximum cluster allocation.
Can be partitioned according to your needs - or you can do it yourself.

* Miscellaneous
SCART cable to connect to a SCART TV just in case you want to play games
or run ST Low software. The Mega (being a serious computer) does not
have a TV modulator.

Printer cable.

Extra long keyboard cable - I can't remember why I made this, but it
may come in useful if you want to see if you can read the screen from
the other side of a room.

20 blank DS/DD disks

* Software
Original System Disks

A number of Floppyshop disks of PD software.

Epic: 3D space combat game

The Killing Cloud: 3D flight sim type game (I liked this one a lot -
the closest you'll get to playing the unreleased SkyHammer for the
Jaguar)

As I am using my commercial software with the Falcon I am not selling
it, but I assume that as readers of this newsgroup most people will
already have some kind of Atari and software to run on it.

** End of Details

> >our little market to provide another means of buying software.
> Really? with 40% reseller commission or more being the norm - I do
> believe there is enough profit - especially as goind on-line reduces
> overheads...

Hmm, I donï¿½t believe that System Solutions has 40% left *after*
translating the software. So, there are two things at the same time.
If ASH decides to provide a WWW-access to their software they probably
lose their partners for translating software and have to do it on their
own.

I hope you understand what I mean?

Tschuess,
Frank

Monday March 16, 8:17 am Eastern Time

Company Press Release

Hasbro Interactive Acquires Legendary Atari Game Property Assets

BEVERLY, Mass.--(BUSINESS WIRE)--March 16, 1998--Leading interactive games publisher Hasbro Interactive, Inc., a subsidiary of Hasbro, Inc. (AMEX:HAS - news), announced today that a subsidiary has acquired copyrights, trademarks, patents and other intellectual property assets of the Atari Division of JTS Corporation, giving Hasbro Interactive rights to some of the greatest video games and play patterns ever created for multimedia entertainment. The Atari properties and assets include over 75 game properties including the legendary titles Centipede, Missile Command, Pong, Breakout and Tempest . Hasbro Interactive plans to release its first Atari title this fall with Centipede for both the PC and Sony Playstation game console.

``We are thrilled that the classic Atari game properties will now be a part of the Hasbro family,'' said Tom Dusenberry, President of Hasbro Interactive. ``These ground-breaking games helped pioneer the video game industry,'' added Dusenberry. ``We intend to bring these classics back to life by updating them with the latest technology and interactive game design, while preserving their heart and spirit.''

Hasbro Interactive has proven its ability to bring beloved arcade classics successfully back to life with its blockbuster launch of Frogger in 1997 for both the PC and Playstation game console. Frogger, based on the 1980s' mega video game originally developed by KONAMI Co., Ltd., was a huge hit over the holidays and continues to hop its way up the best-selling interactive game charts.

``We plan to implement the same aggressive strategy we used with Frogger, in bringing back the Atari classics,'' added Dusenberry. ``We will develop games that appeal to the players who loved the titles as kids, while attracting a whole new generation by bringing the games up to today's highest standards. Of course, like all Hasbro Interactive titles, they will be backed by major marketing and merchandising programs.''

With the acquisition of Atari's deep library of game properties, Hasbro Interactive seeks to strengthen its position in the

action game category. Hasbro Interactive intends to develop various titles for all viable and available gaming platforms - PC CD-ROM, the Sony Playstation and Nintendo 64 game consoles, among others.

Background on Some Atari Favorites:

The largest insect invasion in history was recorded when Centipede hit the arcades in the 1980s. ``Getting the bugs out'' was the mission in this perennial favorite. The player launched rapid-fire attacks against persistent centipedes, sticky spiders, mushroom-dropping fleas and poisonous scorpions in order to re-claim the sacred mushroom patch.

No guts, no glory was the motto in the Atari classic, Missile Command. Players needed quick thinking and rapid fire to combat the battalions of bombers, satellites, missiles and smart bombs in this fast-action shooter. Blow them away first -- otherwise you're vapor!

The two games that gave birth to the video game industry were pioneers Pong and Breakout. No fancy graphics were needed in these addictive thrillers - just a good dose of quick reaction and hand-eye coordination would do the job. Pong, the game of ``virtual'' handball, mesmerized gamers for hours as they battled their friends and foes match after match. Breaking through walls of bricks by ricocheting balls off of a video paddle was the simple, but very addictive premise behind Breakout. The desire to get a better score, kept the early gamers coming back for more.

Hasbro Interactive, Inc. is a leading all-family interactive games publisher, formed in 1995 to bring to life on the computer the deep library of toy and board games of parent company, Hasbro, Inc. (AMEX:HAS - news). Hasbro Interactive has expanded its charter to include original and licensed games for the PC, the Sony PlayStation(tm) and for multi-player gaming over the Internet. Headquartered in Beverly, Massachusetts, Hasbro Interactive has offices in the U.K., France, Germany, Japan and Canada. For more information on Hasbro Interactive titles, please visit www.hasbro-interactive.com.

That is the ST's way of saying it's crashed. The number of bombs indicates what type of error it has encountered (although not very useful for the average user).

It's just like the 'blue screens' in Windows or the 'Guru Meditation' on the Amiga. Not a virus anyway.

>]- oi!....thats a better ATARI set-up than I ever owned, and better than
>]-my current one.... wadday mean "had in 85/86" ? <smile>
>
> Aw, now Tony....! <sheepish grin> Its only got TOS 1.0...and 1 meg! ;-)

I wouldnt mind dropping down to 1.0 just for a decent monitor, let alone a HD :)

Seriously though, the Guy who made (but didnt finish) Kill Thing the fully rendered 3d doom clone for the STFM was using tos 1.0 on a one meg fm with no HD or anything else added, he also made a game I cant recall the name of? (he will kill me for that!).. but it came 2nd in a competetion in the last couple of months that ST Format was alive, thus beating a LOT of opposition.

I know a few people who happily bob along with lesser systems than you mention, either just normal use or actual development, None are on the Internet, thus they get forgotten by the on line community who think everyone has a Falcon and stuff.....

Just pop into comp.sys.atari.programmer.. they don't even think ATARI Low resolution exists anymore......ho how we forget the little people so fast :)

So the next time you are describing an old decrepid system from long ago.. remember some people still use them....hehehe :)

Cheers -- Tony Greenwood (Official Filos Examples Programmer)

Adding information: The ZIP plus definitely HAS got Auto-termination. (At
least the manual says so...)

Don't put an explicit terminator on the SCSI Out port.

The "stuck key" is very annoying, but it can (almost) be avoided...

5524. Workaround! (Re: Losing memory in CAB)

Newsgroup: comp.sys.atari.st
Date: 1998-03-17 00:00:00 UTC
From: Jo Even Skarstein <joska@nuts.edu>
Message-ID: <890155009.445311@tornado.itea.ntnu.no>
Source record: 105364

I've experimented a bit with CAB/Nova VDI/NVDI etc, and the problem with animated GIFs only occures when the EdDI-cookie (offscreen bitmaps) and Nova VDI is present. Very annoying, but it can be worked around very easily:

1. Load CAB.APP into a binary editor (like qed 4).
2. Replace all occurences of the string 'EdDI' with 'EdDx'.

CAB will now search for the cookie 'EdDx' (which is non-existent), and believes that offscreen bitmaps isn't available. No more memory-problems and no more "stuck key" (haven't happened to me since I did this atleast) on the Afterburner.

The downside is that the animations flickers a lot, but until CAB or Nova VDI gets fixed this is the best we can do.

Most, if not all providers in those days allowed SLIP access.

>Well, how do I access this newsgroup now? ;-)
OK, so you are using WinNT and Netscape - in those days people use
technologies of that time, from University or work mainly...

So, what is the difference? whether they buy the software via access
on a PC at work or a Unix terminal at university - they can still buy
the software on-line - pop it on a floppy disk after downloading it
and take it home...

Most people used to download software from ftp sites this way and take
them home to play on their Atari..

Nothing to it. ;)

>Hmm, I don't believe that System Solutions has 40% left *after*

Hi!

There's no problem to use these re-direct URL:s with the original
ASH CAB 2.6 package. But...

My download page is exact located at: http://user.tninet.se/~gcc561r/apps/
The re-direct URL http://surf.to/atari points out (only)
http://user.tninet.se/~gcc561r

e.g. You can't enter this URL: http://surf.to/atari/apps/ to load
my download page.

Hmm... We are not aloud to speak about forthcoming CAB versions (beta),
but as Peter mentioned (as we all already know) CAB 2.7 beta, I will
advise him to take a look at his CAB_OVL, it by default FAKE something.
I think he will find this entry. That's why he cant load http://surf.to/atari

Whether or not they bring the Atari name to hardware remains to be seen. If they are indeed a Project X liscensee they certainly would not say so, that is hush hush information. Secondly, if the Game.com fails they may attempt to revive their handheld market under the Atari name.

Just for thought, has anyone ever considered calling a 2D game 3D because it is playing from a Picture Tube which in itself is 3D? That would be funny, by that definition, all side scrollers would now be considered 3D games.

This suggest that there is a general problem with Nova VDI's offscreen
driver, and not with CAB. It's probably easier to modify STA_VDI
itself (replace 'EdDI' with 'EdDx' or similar), it will then install a
faulty cookie and no applications will use offscreen bitmaps.

How sharp is the division between "Hasbro, Inc" and "Hasbro Interactive"?

If these denials are coming from "Hasbro Inc", whereas "Hasbro Interactive" did the Atari acquisition, then how much do these denials mean?

In light of the SEC report and the independent confirmation from TV, there HAS to be an explanation of this "official" denial from "Hasbro"!

jb> voids.

That is true. However, CAB loses memory even when you're doing NOTHING ELSE while online. Your scenario only comes into play if you run other applications while online. Yeah, it could be a fragmented memory problem, but if it is, it's CAB doing the fragmenting, and I'll bet it happens even under TOS.

t> This is on both SingleTos and NeoDesk/Geneva.

The only time I've had that problem is on certain sites (such as the /IMAGES/ site I posted awhile back), but it has nothing to do with available memory. It happens on those sites even when first loading CAB.

Also, in spite of losing memory over time with CAB, AFAIK, I've never actually ran out of memory. I have the cache configured to keep one meg free of RAM, and I pretty much always have at least that one meg. However, after awhile it's unable to keep any pages with graphics in its cache, and it's unable to load the larger pictures.

t> PS The view on my 17" is amazing! ;-)

Mind if I try it out for awhile, to see if I want one? ;^)

MK> it. You will now see an interresting thing..... your memory
MK> slowely disapears! Under TOS it will mean a disastrous system
MK> crash after a short while, MagiC handles it much better.

I use MenuInfo to display my free RAM. It updates every two seconds and seems to be very accurate.

I was online last night (using a MagiC 5.11 Falcon), and had _several_ animated GIFs on screen at once, and my available RAM did not shrink at all, even after a couple minutes.

Still, _something_ is stealing my RAM while online with CAB. I start out with about 8 megs free. After a couple hours, I'm down to 1-2 megs free, but CAB is only using 1-2 megs for the graphics cache.

And when I first start out, Cab keeps several pages with graphics in its cache, but after awhile, it has difficulty even keeping one page in its cache, because the memory is no longer available. But where is it going

And what's weird is when using I-Connect, even quitting CAB often does not restore the memory. I have to quit I-Connect too. However, when using STinG, quitting CAB will get back all of the lost memory.

MK> One interresting thing to notice under MagiC is that it's CAB it

Re: "Hasbros", dlormand@aztec.asu.edu scribbled the following on 17 Mar 98 @ 18:07:45:

d> If these denials are coming from "Hasbro Inc", whereas "Hasbro
d> Interactive" did the Atari acquisition, then how much do these
d> denials mean?
d>
d> In light of the SEC report and the independent confirmation from
d> TV, there HAS to be an explanation of this "official" denial from
d> "Hasbro"!

I think it's basically just a case of the left hand not knowing what the right hand is doing. They probably just hadn't informed their support personnel, and they hadn't heard it anywhere else.

: minutes, which basically is most of the Atari licenses.

I don't mean to be annoying, but doesn't the description:

"1-dimensional games that only last 3 minutes"

apply to just about any console game? In general, I have always preferred
computer games to console fighting, platform, and other low depth genre's.
With games like AvP, the Jaguar had the potential to bring more
computerish titles to the console market, but they instead dropped that
sort of development in favor of SNES style titles.

The problems occurs also with CAB 2.50 and with the TWILIGHT
screensaver. On my TT with Crazy Dots II graphic card and with NVDI
4.11 r7 as driver I don't have this problem at all. Only on my Hades
with Nova VDI.

He, I followed your advise and yes the problem is gone.
As I've similar problem with the screensaver *Twilight* I suppose that
this can be solved the same way. The *Twilight.acc* contains also the
EdDI string.

Thanks

|to time lost clusters but these are all coming from *Newsie*.
|Somehow the _log file_ get corrupted. Since the day I threw away Newsie
|the lost cluster problem is gone.

I think Martin is quite right about the log file. I had noticed a
number of files on my Newsie partition called LOST0001.DAT (and so
on). It was clear that they mostly contained log information, and,
because there never seemed to be anything other than current
information in the log itself, assumed that Newsie had written them.
I now see that they are the lost clusters saved by Diamond Edge when
fixing the partition. I don't think I can turn the log off but I
have tried altering the settings to record as little as possible.

I keep little other than Newsie on this partition and so far have
not been aware of any running problems.

Nova VDI 2.66, TK 5.07, CAB 2.6. Btw. I had serious problems with
scrolling windows (including CAB) until I set the Nova-memory to
"serialized" in TK 5.07. The docs says that "nonserialized" should
work as well, but that's not correct.

>> The "stuck key" is very annoying, but it can (almost) be avoided...

> Yes, you can disable the caches of the MC68040 but then the computer
> becomes painfully slow.

The "stuck key" is generally triggered by a specific piece of code in
the Pure C library, and it can be patched with Doug Little's
abfix.ttp. The problem with CAB is that it's written in Pure Pascal
which has similar problems with a library, but no patch is written.

I've discovered that if you prevent CAB from using offscreen-bitmaps,
it almost never triggers the "stuck key". And this is without turning
off any caches :-)

Re: "Partitioning 2.1 GB IDE drive", Carsten Krumnow scribbled the following
on 18 Mar 98 @ 11:48:20:

CK> Even with TOS you should use BigDOS (to get in most
CK> mailboxes/FTP servers, I think). With this little program you
CK> can access partitions up to at least 1GB, with HDDRIVER even DOS
CK> compatible hard disks with partitions up to 2GB (unfortunately
CK> no FAT32 up to now).

So you're saying that even with HDDRIVER 7.04 (what I'm using), I still need
BigDOS if I want to access a 1GB partition with TOS?

I'm assuming I wouldn't need BigDOS with MagiC 5.11, correct?

CK> You should leave your boot partition below 512MB, so you can
CK> access it even when all software on it is damaged.

Yeah, it will probably be no more than about 100MB, just large enough for
system files and fonts.

CK> Leave the 1GB partition slightly below this size (eg 998MB),
CK> this will reduce the necessary cluster size by half compared to
CK> a size of 1002MB.

Excellent idea! I probably wouldn't have noticed that if you hadn't said
something.

CK> The best Optimizer I know (HD_OPT2.6) can handle large
CK> partitions, but no DOS compatible drives.

That's the Optimizer I'm using, but I won't be using any DOS compatible
drives, so that's no problem.

Great stuff -- thanks for all the useful information!!

Maybe I can shed some light on it then. As an Atari enthusiast I thought I witnessed the death of Atari when the Tramiels drove a leader of its industry into the ground. Then JTS purchased Atari probably for its property assets as Atari's warehouse was auctioned off. I read financial reports from Atari about them losing tens of millions each fiscal quarter.

This may sound stupid but when I'm comfortable with a system such as my Falcon and the Asteroids Deluxe arcade game standing behind me next to my refrigerator I'll defend my platform and the name Atari as my best option (especially for my budget) like I did in CompUSA a couple of months ago. I am also a Star Trek and Star Wars fan and the feeling would be just the same if Paramount axed Star Trek and Lucas axed Star Wars. Star Wars fell to number two all time money making movies and Titanic took its place. Imagine what the fans of those movies would feel if the industry left those projects in the dust.

Since Hasbro bought Atari its name has a chance to be resurrected and become a household name as it once was and who better to do it than the second largest toy maker in the world.

Now back to your question. I'm excited because everyone I've been defending the name Atari with is telling me that Atari is dead I can say "Oh yeah? Then..." Hasbro's acquisition of Atari means it has survived the best of times and the worst of times (and I mean really bad times) and it still exists. Maybe not for our computers' platform (that's been left to us) but the name Atari means something to enthusiasts like me. It's more sentimental I guess.

Later,
James

jb> I did in CompUSA a couple of months ago.

There's nothing wrong with defending your investment, but why such fanaticism over a brand name? I drink Pepsi, but I don't go nuts when someone says that Pepsi sucks and Coke is better. And I couldn't care less what happens with PepsiCo, though I'd prefer for Pepsi to remain available.

jb> I am also a Star Trek and Star Wars fan and the feeling would be
jb> just the same if Paramount axed Star Trek and Lucas axed Star
jb> Wars. Star Wars fell to number two all time money making movies
jb> and Titanic took its place. Imagine what the fans of those

jb> dust.

Well, I'm a fan of those two series, and while I'd be somewhat disappointed if there was no further development, I wouldn't lose any sleep over it. I would just enjoy what's already out there.

jb> Since Hasbro bought Atari its name has a chance to be resurrected
jb> and become a household name as it once was and who better to do
jb> it than the second largest toy maker in the world.

Again, why all the fuss over a name? Atari under Hasbro has virtually nothing to do with Atari under Warner or Atari under the Tramiels. It's just a name. Were you a Hasbro fan before? If not, why are you one now? That's what Atari is now. It's Hasbro. It's the same company, but now they have rights to a simple name (and who knows if they'll even use the name).

I assume you're not a huge Commodore or Nintendo fan. What if one of those two companies bought the Atari name and slapped it on their existing product, would you still be excited, just to have the name on the shelves? That makes no sense. Atari is not a sports franchise; it's a simple brand name.

I guess I used to be the same way. But over time I realized it made no sense to be so loyal to the name of a company. Only the product matters. The name on the outside is irrelevant.

Actually, all computer games are 2D because the CRT has a disply that
is is only two dimensions. In order to be true 3D, one would have to
use one of the available stereoscopic methods like LCD shutter glasses
and such with it.

Hehehe.

Hi,
I have an Atari 1040 STF with an Atari SC1224 monitor and a 20 MB external Supra Hard Drive for sale.
$110 for everything.
Everything is in excellent condition and works fine.
There is also some assorted software, including Mark Williams C compiler w/manual, and some games.
Plus, 2-3 years worth of Start Magazine disks.
At no extra charge, that is. =)
E-mail me if you are interested.

- rbodek01@fiu.edu

I went from 10Mb to 20Mb and did not notice any slow-down during
operation of CAB.

The bit which REALLY gets short of breath is CABCACHE which now takes
ages to build the directory when you want to refer to/find an entry.

A long time ago, someone said to me it was possible to print up to 600 dpi with the SLM804 ... with a special driver ...
I have never heard anybody speaking about that here or elsewhere ...
Is there somebody using this capability and is it possible to run the driver on the SLM605 ?
Perhaps is it also a little hardware modification but I don't remember now ...

No, that cannot be theoretically possible because the Phosphers on the
CRT must be a few molecules thick, hence they are 3D, therefore the 2D
game is really 3D. My theory on this would only make sense if you are a
cheap skate video game company trying to make money by calling 2D games
3D. I wonder if it could be argued in court ;) Think of it this way
most CRTs are not flat, they are rounded meaning they are actually 3D.
The phosphers must be 3D anyway you put it because they have some
height width and depth. Therefore the phosphors are 3D. If you display
something on 3D it must be 3D. The CRT itself is also not flat, the
electron gun sticks out the back, but relating the fact that a 3D setup
is projecting images than the image must be deduction be 3D. Pretty
interesting theory isnt it? Now I need someone to argue the 1D games
for me...

r> I went from 10Mb to 20Mb and did not notice any slow-down
r> during operation of CAB.

That's still pretty small, though. I'm talking about going from ~25mb to at least 100mb.

r> The bit which REALLY gets short of breath is CABCACHE which now
r> takes ages to build the directory when you want to refer to/find
r> an entry.

Yep, I get that already. And Cache Cleanup is also fairly slow, if I haven't ran it in awhile. Worse, CAB seems to flush out old files fairly often, to make room, and that is pretty slow too, and it happens while you're online, waiting to do or see something. I just wonder if it's going to be unacceptably slow with a ~100 mb cache.

Obviously, the new drive itself is going to speed things up fairly dramatically, since the standard Conner 85 mb drive is so slow. Still we're talking about a significant increase in size.

Anyone using a ~100 mb cache with CAB?

It's sad, but true... I do personally believe that some company could
make a reasonable return on their investment by purchasing the rights
to Atari ST/Falcon hardware and producing a "dedicated" music machine.
Let the buyer figure out later that it can also do some reasonable
home computing tasks. All they'd hafta do is DENY any claim or
reference
to Atari hardware.

I see where refurbished external Jazz drives are selling for $200. Anyone have any experience with refurbished Iomega products? I believe they carry the same warranty as new drives (which is probably only 90 days).

$200 for an external 1 GB removable SCSI drive doesn't suck, especially when it's such an established product. But that's assuming that they are reliable when refurbished.

SLM605 is equivalent to the Epson EPL 6000 and is easier to get drums
and toner for than the SLM804 which cross references to the OASYS
Laserpro. 605 drums are $129, 804 $179. Toner is about $25 for either.

Just what I think. Never mind who make the hardware, as long as it will
run TOS/MagiC, all my easy to use software and have a Motorola Inside.
And no Micro$oft inside or outside.

cheers Joergen

>BigDOS if I want to access a 1GB partition with TOS?

BigDOS only if you need to swap data with any PC (Same device)

>I'm assuming I wouldn't need BigDOS with MagiC 5.11, correct?

Right. But you NEED MagiC or any TOS >1.4
I wrot some articles about HDDriver for the german Revolution CD.
Take a smal part of the text, but sorry, it's in german.
---cut---

um diese im HDDriver angeben zu kï¿½nnen. Bedenken Sie bitte das DOS-Kompatible
Medien am Atari nur unter MagiC oder BigDOS komplett bearbeitet werden kï¿½nnen.
Das betrifft natï¿½rlich auch Wechselmedien!

Daraus ergeben sich allgemein folgende Partitonsgrï¿½ssen:

(Partition Size)!

TOS 1.00 - 1.02 256 MByte
TOS 1.04 - 3.xx 512 Mbyte
TOS 4.0x 1024 MByte

MagiC / BigDOS 1024 MByte
2048 MByte (DOS-Kompatibel)

Verwechseln Sie hierbei bitte nicht die gesammte Kapazitï¿½t der Platte und
die 'Partionsgrï¿½sse'! Viele Anwender verwechseln das offenbar leicht und
sind der Meinung, daï¿½ die Grenzen fï¿½r die Kapazitï¿½t einer Partition
etwas mit der maximal erlaubten Kapazitï¿½t einer Platte zu tun hat.
Da gibt es aber ï¿½berhaupt keinen Zusammenhang.

Mit HDDRIVER sind beliebig grosse SCSI- und IDE/EIDE-Platten mï¿½glich.

---cut---
Regards, Robert

So you missed all the fun of installing the TAF/Chimera package? I was
one of those who downloaded and installed an entire
MiNT/MiNTnet/MinixFS/unix-style setup complete with X11 to get a web
browser which crashed if there was more than 10k of graphics on a page
due to lack of memory (on a 4Mb STE) :-) (and very grateful I was for
it, too, until CAB came along and saved the day).

This would be early-mid 95 I think. It worked with PPP too, by the
way.

>
>O.K. Theoretically you were able to connect but not many ATARIans really
>succeeded in their tries.

That may well be true. We were lucky in the UK as ST Format seemed to
have come to an arrangement with Demon (which was still pretty new at
that point) who provided a starter pack for the ST (NOS and offline
utilities stitched together with a CLI). Frank Charlton was providing
technical support for a while as well. Which is why there are still
plenty of Atarians on Demon, though it's now regarded as less friendly
to us than it was and the likes of Zetnet are attracting more Atari
users.

Cheers,
John

US>
US> Of course you can. There are lots of users running MetaDOS/CDTOOL
US> and HDDRIVER.

Hi Uwe,

I certainly don't mean to be rude to you or HDDriver, but:

What I meant was, of course, after you have your drivers installed (in the case of Extendos or Metados, the .DOS and .BOS files and the program itself of course), Hushi/SCSI-tools displays immediately the text on boot-up "CD-ROM xxx on SCSI-ID Nr. 4" (that's in my case). HDDriver does not, you first have to "switch-on" ID Nr. 4 in the set-up menu.

Then, with HDD driving my HD I tried to "officially" install Metados from within CD-Tools, but the "install option" remained greyed out! After I booted again with Hushi this option was simply available.

And finally, when I deleted the HDDriver driver from my C: partition (using the Utils option "remove driver") and tried to install the old Hushi driver again (from the SCSI-TOOLS option "install driver") the installation went OK but the system refused to boot from the C:partition completely. It still does, and I solved the problem by installing Hushi on my F-partition and tell it in the config to boot from C....

I don't rule out anything done wrong by myself, OTOH, if I hadn't encountered these problems during the evaluation, you probably had sold another copy to me by now...

5592. Newsie/Neodesk/Geneva Prob.

Newsgroup: comp.sys.atari.st
Date: 1998-03-18 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <6en8n2$k5u$1@news.campus.mci.net>
Source record: 105262

Okay, I've got a problem with Newsie v.86 and the latest NeoDesk/Geneva release (006). Before updating from versions 4/5, and still with single TOS, everything in Newsie works fine.

Now, whenever I try to extract a binary file, it starts, then right before it says "decoding completed" in the dialog, the dialog and all Newsie windows disappear, and the only way I can get them back is to use the Task Manager to put Newsie to sleep, then re-awaken it. Anyone having similiar problems and/or a solution? Thanks...

Well, I've been told by Dan Wilga that there is a problem with the way some programs use the clipboard, and of course, Murphy's law being the way it is, my fav. editor QED 4.0 does this. It brings up an error message everytime I cut/copy/paste etc, to the clipboard. Has anyone found a solution? I've got Edith of course, but to me, Edith's keyboard response is slow under NeoDesk/Geneva, even with Nemesis.

I'd settle for a way to make Edith faster under NeoDesk/Geneva, too! (I'm using NVDI 4.12) Thanks in advance! ;-)

Source record: 105264

Ever since I've upgraded to the latest STing modules, I've noticed a little different behavior from my STing setup. Now, if I wait for the ISP to disconnect me due to a "timeout", STing doesn't just quit, it 7-8 bombs out, and locks everything up, requiring a full power-off reset. Anybody else have this problem and a solution? Thanks! ;-)

PS Oh, I've never been able to use the Serial module from about 2 updates ago or so...I've always had to use an older version, other-wise, it 2 bombs with my ISP right after the "success" message in the STing dialer dialog window.

PSS Before somebody says this, I know the obvious solution is to quit falling asleep at the keyboard at 3am, (and log-off like a normal person) but... <grin>

From: rosco@game-master.com
Message-ID: <9oHP.26$OQ.458516@wagner.videotron.net>
Source record: 105269

I'm having difficulties downloading via FTP with STING, and I'm pretty sure the problem lies with the TCP module. Could someone advise me on the settings for the STING.CFG file? This is what I have:

```
TCP_PORT = 1024
MSS = 1024
REV_WIND = 4096
DEF_RTT = 60
DEF_TTL = 128
TCP_ICMP = 1
```

Does this look good? I have MTU set at 1500.

Thanks...

I really don't think that reputation is big a problem. Because of
marketing, I don't believe enough "gamers" got their hands on one to
really make that much of a difference. In my experience, I've noticed
that many of the big gamers primarily remember the 2600 & the Atari
arcades.(very few know the difference between Atari Corp and Atari
Games)
I believe that even a product re-release, such as the Lynx, if
pushed and marketed correctly could definitly take off. Marketing
and support is everything, Nintendo has proven that many times over.

>simm slots.

Actually a very small quantity of the first STE's came with sipp slots, but
I think this should really only be a pre-series or prototype thing. There
are sipp/simm adapters available from electronics shops.

To remove the simms you have to gently pry apart the plastic tabs at the end
of the modules to release them and pivot the simm to a 45degree angle to
take it out.

```
1 /\ 2
<= ||3 =>
!-----------------!
```

Once you've done this, just replace the modules by snapping new ones back
in, in the same way (45 degrees first, then snap them up right).

I'm not sure of the exact mechanics involved with sipp sockets though, but
they really should be simms.

Oh, and the exact type of memory you need is: 30pin, 1Mb, 120ns minimum
(faster is ok), parity or no-parity is ok too. Just about any 30pin 1Mb
simms will do.

Cheers,
Nick

Imagecopy should restore your desktop colors when you close all picture windows (without actually exiting). Of course, with the proper settings it will not change your desktop at all, but you'll usually lose a lot in quality, and you probably don't want that.

Hi,

Does anyone out there know of a good source of Printer Drivers? My old DeskJet Plus is on the way out, but before upgrading I need to know if I can get drivers and if so, for which printers.

Thanks for taking the trouble to reply :-)

5608. Atari Laser Printer

Newsgroup: comp.sys.atari.st
Date: 1998-03-18 00:00:00 UTC
From: Tim Curtis <sexsymbol@execpc.com>
Message-ID: <6eo4eg$7jf@newsops.execpc.com>
Source record: 105278

Just saw one of these for sale, although I didn't notice the model number. There was also a small box (about the size of a modem) that said "Laser" on it.

I thought about picking it up, but I haven't decided for sure whether or not I will, as I'm limited on space here. Can anyone give me advice on whether or not this would be a good addition to my Mega ST4? Are toner cartridges available and are they really expensive? Is the other box necessary to use it? Anything else that I should know?

Pardon my lack of knowledge,

Tim

The ATARI laser printer offers at least 300x300 dpi and is very suitable
for your MEGA ST4. Most applications have their own drivers for it, but
Typewriter emulation should be included.
Look at the model number: SLM605 is the newer and smaller model (instead
of SLM804). The 605 model is cheaper in running, because the drum unit and
toner units (could be hard to get) are cheaper.
Printing quality is nearly equivalent with both models.

The little box beside it is the very necessary interface which provides
the port to the ATARI's ACSI (DMA) port.

> Pardon my lack of knowledge,
It's okay, therefore we are here...

Not completely true, I think.
With all my SCSI hard drives "Eject medium" spins down the drives. A
simple access to one of the affected partitions spins them up again.
I call it "manual power and noise save", very nice feature I think...
Besides, not only ZIP disks, but also CD-ROMs are ejected.

> multimedia and demos. Is there any reason why this might not be a good idea?
> Will Optimizer handle partitions that big?

Even with TOS you should use BigDOS (to get in most mailboxes/FTP servers,
I think). With this little program you can access partitions up to at
least 1GB, with HDDRIVER even DOS compatible hard disks with partitions up
to 2GB (unfortunately no FAT32 up to now).

You should leave your boot partition below 512MB, so you can access it
even when all software on it is damaged.
Leave the 1GB partition slightly below this size (eg 998MB), this will
reduce the necessary cluster size by half compared to a size of 1002MB.

The best Optimizer I know (HD_OPT2.6) can handle large partitions, but no
DOS compatible drives.

> >...two years ago it was impossible for most of us to join the net with
> >an ATARI.
> And this is the point that Charles and I are arguing - it was not
> impossible..

It was impossible for most of us, because it was too difficult and a lot
of programs didnï¿½t work on graphics cards etc.
It took a long time until I got programs that work on my AB/Falcon (and
there are still problems, e.g. with CAB 2.5)

> OK - it may have been bloody difficult, given thet KA9Q
> etc were a dog to set up - but it was certainly not impossible.

I agree, but today there are more ATARI Users online. ;-)

> >> I have been around on the Internet since 1989 - and used my Atari in

Well, mine (at that time) did not. O.K. There were others but they were
too expensive.

> OK, so you are using WinNT and Netscape - in those days people use
> technologies of that time, from University or work mainly...

I would like to use MPC instead if there were an opportunity to use it
on a TCP/IP-Ethernet.

> So, what is the difference? whether they buy the software via access
> on a PC at work or a Unix terminal at university - they can still buy
> the software on-line - pop it on a floppy disk after downloading it
> and take it home...

And that is exactly what I wanted to say. Perhaps the high demand to
hensa was from people using a PC or something similar just to download
ATARI software and to carry it home on disks.

> >If ASH decides to provide a WWW-access to their software they probably
> >lose their partners for translating software and have to do it on their
> Not necessarily - they can have an agreement as to English versions
> only being available to download and buy from the SS site...

Hmm, I donï¿½t think thatï¿½s a good idea. I can already hear people
complaining that ASH does not provide offers for international
Powerusers.

On the other hand ASH doesnï¿½t provide ISDN at the moment although their lines are already connected to this service but as I said before, they do not want additional expenditure.

I just tried the Nova VDI 2.66 driver for the first time. As is the case with 2.61, memory problems with CAB 2.5 _don't_ occur for me.

Magnus... the 2.66 Nova driver on your Web page is different than the one from Computerinsel's BBS. Gerhard told me that the new driver, which I'm running now, is meant for _all_ Mach 64 Nova cards. I'm not sure what's so different about the driver on your page (which won't work with my 'Nova Plus' card). The binaries' filesizes and timestamps are different, too. Maybe it's a special version for the AB Falcon? In any case, the Nova 2.66 driver I have now is memory-friendly when it comes to CAB (as is 2.61).

Depends what machine you are using.. that pretty much dictates your
boundaries....

> (well, the BASIC language on my BBS) but I can see where a lot of the
> programmers feel like they to choose high end over low end... Its a very
> tough call to me... ;(

Its quite simple to me.. you go for the best you can.. if your
developing on a standard STe then your minimum starting point is the
STe capabilities (if not lower).. then you go for as high as your
knowledge or your preffered programming language will let you
........quite simple innit :)

Generic SIPP to SIMM converters are available at most computer supply stores. By mail order, I know Jameco Electronics has them. 30 to 30, and a variety of 72/30 to 30/72 SIMM/SIMM converters. I would assume the generic 30/30 SIPP to SIMM would work in an STe.

Except with TOS 4.0x you always need Big-DOS or MagiC. Partition sizes
are limited by TOS, not by the hard disk driver. So the hard disk driver
can't do anything about this.

> I'm assuming I wouldn't need BigDOS with MagiC 5.11, correct?

This is correct. Big-DOS doesn't run under MagiC anyway.

~Actually, I don't think my losing memory problem is related to animated GIFs
~at all, especially after reading about the fix for Nova users. I think we're
~talking about two different issues.

I've actually asked this question before now, a few months back
actually. As soon as I got my copy of MagiC V4 I began to notice CAB
doing the dirty on my RAM. Actually it happened on my STFM as well.
It seems to be most noticable when I browse with Graphics switched on,
but that could be because they do use more RAM in the first place,
i.e. it would take considerably longer to loose a corresponding amount
of RAM on text alone? No one was able to reach a solution to the
problem then, and it looks like we are no closer now! Eventually I
too am unable to continue using CAB and have to quit. This is the
Shareware release V1.5 (I intend to buy the commercial release soon)

I have similar problems in using Photoline (demo copy) after each
picture is loaded in and altered in some way, then dumped (cannot save
in the demo!) the RAM does not return in full. After two or three
pictures I have to quit and reload the Prg. It is certainly odd, and
I hope after my 14Mb upgrade there will be enough for a few minutes
longer Surfing, or that a solution has been found by then.

My current system is a Falcon running MagiC 4, NVDI 4, CAB v1.5, STiK,
etc etc.

Yours with ever decreasing RAM

James........

The above is an example of a couple of "DIPZOIDS or DWEEBS" carrying on a meaningless conversation and posting it to every Atari Newsgroup that they can. BE WARNED... New SPAM Filters are going to be implemented by Service Providers and Internet Businesses that will KILL just such meaningless drivel. There is no reason for somebody to post their "Dreams" in every COMP.SYS.ATARI.* Newsgroup and for somebody else to reply to that drivel sp that it goes to every Atari newsgroup. I have expressed my displeasure with this in the individual newsgroups without posting it to every newsgroup.

If the Internet nesgroups were run like a BBS, the above users would be DELETED for poor etiquete. There is absolutely no reason to post to every Atari newsgroup. People interested in Atari will read every newsgroup anyway and it's a pain in the rectumn, to see the same message everywhere because the "DWEEBS and DIPZOIDS" haven't go a clue as to posting properly.

The new SPAM Filters will recognize a message that is posted to more than one or two newsgroups as SPAM and Delete it. This will more than likely lower the volumn by about 30-40% and means that messages lile the above that are popsted to everywhere are DELETED and to that I say good ridance.

If people can't carry on a civilized conversation in One (and only One) nesgroup about a subject relevant to that newsgroup, then they have nothing at all to say. I personally look forward to the new SPAM filters as it will mean that I don't have to see the same message in the 6-12 Atari newsgroups that I carry.

I trust the offending parties get the picture. And by the way... the Sale of the Atari name and licencing by JTS to Hasbro, is... in the scope of Big Business,.. a non-event. In a years time or so, those old titles will surface on CD-ROMS for old Atarians to play on their PeeCee's.

I trust the "kiddies" who post in all the COMP.SYS.ATARI.* newsgroups where true Atarians just want to keep informed and not read the same drivel over and over again, get the picture.

5629. Choice of bootup

Newsgroup: comp.sys.atari.st
Date: 1998-03-19 00:00:00 UTC
From: Yves Gablin <yves.gablin@imag.fr>
Message-ID: <35110F64.41C6@imag.fr>
Source record: 104949

Hello,

I've got a problem at boot time.
My computer (520STE-4Mo-500Mo-Minix on F:) is a kind of big experiment in itself. It is crowded with small utilities.

I would like to share the use of the computer with other persons (with very little experience of computers) so that my experiments don't bother them.

SO:
- I use MintOS to allow each person to have their home directory.
- I use a boot selector so that a setup may be chosen with only a function key.

BUT:
- After MintOS has started (init.prg), no other AUTO prg runs.
- to make things perfect, the setups should depend on the user, so MintOS should be first to run (now the last because of the first point).
- to make things worse, some applications (I won't name) can't run while Mint does.

As I see things, the solution would be to :
- start Mint first (and MintOS as a consequence).
- ask for the USER name. (Start of tcsh)
- do copies or aliases according to the USER (.cnf, .inf, .prg, .cpx, .acc, .sys ...) with tcsh script.
- show the USER's setups and wait for the choice.
- execute the setup.

The problem is that the setup should also :
- tell the window manager to be run (tos in ROM, MultiTos, fvwm).
- guarantee that auto programs keep running if mint is shut down.

SO MY QUESTIONS ARE :
1- How can a process be started independantly of its parent process so that it keeps running if the parent is killed (because of those programs that demand Mint not to be present) ?
2- If the choice is made to keep Mint (and MintOS) running, what is the shell command to start the TOS in ROM ?
3- One last thing : How is it that I have rights problems when using AES4.1 as a user of the WHEEL group but different of root ?

Sorry to write so long messages and to ask so much...
Any help will be welcome.

Thank you,

Yves.

Maybe there were some old prototypes in that sale. Or maybe they don't really want the 8 bit stuff and we could pick up the rights or a couple a bucks.

Back to reality. I thing most people still think of the good old 2600 and the fun they had with it if they hear the name Atari. That might be good. Atari has been synonimous with "we make great products, but let's not tell everybody" ever since.

Hasbro on the other hand is very famous (well, the products more then the company name), they are the guys from "transformers" and such aren't they?

Hmm, computers transforming into Robots???? "I'm no XE, I'm Optimus Prime." Damb, where gonna have endless discussions with our computers about the ethics of changing their Operation Systems, CPU, etc.

(Hey, maybe if you're lucky enough to have this cool (but not Brainless) Transformer, you'll be greated with "Yo dude, Check out those >beep< pictures I downloaded for ye!" :-)

Someone just mailed me this silly joke (although it must be an old one) that seems somewhat relevant to this thread (it should go over very well with all the Deutscher and English in this group):

----------8<--------8<--------

Today the European Commission announced an agreement between the English and German Governments. The Agreement states that English will become the official language of the EU rather than German.

As part of the negotiations, Her Majesty's government conceded that English spelling had some room for improvement and has accepted a 5 year phase-in plan that would be known as "EuroEnglish": -- In the first year, "s" will replace the soft "c". Sertainly, this will make the sivil sevants jump with joy. The hard "c" will be dropped in favor of the "k". This should klear up konfusion and keyboards kan have 1 less letter. There will be growing publik enthusiasm in the sekond year, when the troublesome "ph" will be replaced with the "f". This will make words like "fotograf" 20% shorter.

In the 3rd year, publik akseptanse of the new spelling kan be expekted to reach the stage where more komplikated changes are possible. Governments will enkorage the removal of double letters, which have always ben a deterent to akurate speling. Also, al wil agre that the horible mes of the silent "e"'s in the language is disgraseful, and they should be disposed of. By the 4th yar, peopl wil be reseptiv to steps such as replasing "th" with "z" and "w" with "v". During ze fifz year, ze unesesary "o" kan be dropd from vords kontaiining "ou" and similar changes vud of kors be aplid to ozer kombinations of leters. After zis fifz yer, ve vil hav a reli sensibl riten styl. Zer vil be no mor trubls or difikultis and evrivun vil find it ezi tu understand ech ozer.

ZE DREM VIL FINALI KUM TRU!!

I use MagiC 5.0 and I DO need BigDOS not to access large partitions but to
have a FASTER access on DOS compatible drives.
Apparently it DOES run with MagiC...

>Perhaps is it also a little hardware modification but I don't remember
>now ...

Yes, it's possible to modify the SLM804 to print 600x300 but...
it's hardware, no software emulation. According to an article found in
the Dutch magazine *ST* date september/oktober 1991, nr 33 p.51-52
it's a kit made by the *Marvin AG* (Zï¿½rich, Switzerland). In Germany
it was available for around DM300,-.
At the time the article was written there weren't many printdrivers
available that took advance of the 600x300 setup. It was only really
usable with Calamus 1.09N.
Nowadays the situation isn't much better I guess. There is a special
Calamus driver but for the other prog's...I don't know.

Well, err, the package was sent COD, but noone bothered to collect the fees:). I just rec'd a response from Woller this morning on an acceptable method of payment for him. It seems like it takes about two weeks for him to reply to email. Anyway, the billing had his bank ABA number and account, so I just did a direct deposite into his account. The total cost was driven up quite a bit by doing this, but at least I have the software. (although I wouldn't mind a trip to Germany:0).

Hopefully, any delays to customers are due to the business changing and I think someone said they relocated. They do offer some nice products.

I would offer to distrubite N_AES, but everyone would have to understand that no support is given, it's German only, and updates may or may not ever be offered. The cost for shipping from Germany isn't cheap, and the more packages included the better in one order.

Mike

d> That said Secure Shell technologies such as SSL are very safe.
d>
d> On-line transactions is the way to go for anyone really - E-
d> Commerce is ready for a massive boost.
Hmmm, having said that you would be suprised by the number of sites i've seen
which go all out on the security of online transactions and then store the
actual transaction details as a flat file on a server
connected directly to the internet. So although the transaction at point of
commencement cannot be intercepted afterwards it is stored on a server which
is itself open to attack.

Agreed. I also just heard on the radio that new ISP software is in testing that will automatically reject any email that doesn't have a legitimate return address. Things are looking up!

MasterBrowse is very good and is shareware. Or QED, which is an excellent
freeware text editor, but can also be used as a text viewer.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy,alt.atari-jaguar.discussion

I have read quite a bit about Hasbro buying Atari in the last week. I have seen a lot of misinformation on the newsgroups, so I thought I would put in some facts:

Hasbro bought Atari assets for $5 million.
These "assets" include the rights to 75 video game titles (they do not include any rights to redistribute computer or videogame hardware - this means that Hasbro cannot "reintroduce" any 8-bit Atari computers, ST computers, or Jaguar consoles, redesigned or not.
One article I read mentioned that these games would be marketed under the title "Atari Platinum Series" - that is probably the extent to which we will see the name "Atari" on any of the new products.

Contact Homa Systems House about their Umax scanner driver:

http://www.magmacom.com/~nima

>It is TWAIN compliant.

TWAIN doesn't apply to TOS. There's a counterpart called GDPS, which
allows applications to hook into this driver interface. The Homa drivers
are standalone applications and also support GDPS. A good example of GDPS
is Alexander Clauss' OCR 1.4.

Actually, it's not new at all. They're talking about sendmail 8.9 (which is currently in beta), but it's been pretty easy to implement the exact same filters in sendmail 8.8.x, just not "out of the box".

Similarly, it's pretty easy to apply good filters to news servers. I've been filtering my feed for about six months now and my customers couldn't be happier. My news server rejects around 250,000 pieces of spam every day.

So as to make this article a tiny tiny bit on topic, I'm looking for a Falcon, since the FBI never gave my old one back (don't even ask). So, if ya got one for sale for a reasonable price and you live in the US, gimme. :)

Hi,
ScanX, UMAX scanner driver from Homa Systems works great on the ASTRA
1200S or 1210S, however, on Astra 600S or 610S, it can only scan in
monochrome or grayscale. Color scanning is not well supported due to the
scanner firmware issue.

For more info, contact Homa Systems at
http://www.magma.ca/~nima

If you indeed use a Mega STE, that points very very much towards that
hardware bug that Mike Borsley mentioned too. Try the Modem 1 port on
the Mega STE. I know it's slow, but if everything works ok with it, then
you've found the culprit, and it's time to purchase a GAL and read the
HSMODEM docs (I suggest the other way round though ;-)).

u> Except with TOS 4.0x you always need Big-DOS or MagiC. Partition
u> sizes are limited by TOS, not by the hard disk driver. So the hard disk
u> driver can't do anything about this.

Well, got the new drive up and running. It wasn't quite as easy as I thought it would be. First, the side holes didn't match the bracket inside the Falcon <ack!>, even though a previous Toshiba drive matched perfectly. I was unable to use even one screw, but I managed to fit in in there to where it's pretty stable.

Second, something's terribly wrong with my TOS 4.04. It's bomb city trying to do anything. (I should have had a ready-made MagiC floppy.) So it took quite awhile to even partition it, much less get my boot files in place, to where I could run MagiC. (No problems at all using MagiC.)

But now, all is well. I went with 67, 250, 250, 250, 250 and 998 mb partitions. Everything's worked well so far, including Optimizer (I only ran the log check). Well, everything except Ease's CHANGES.PRG doesn't seem to work on my 998 mb partition. It doesn't show the free space. No biggy.

If you're still with me <g>, what do you recommend for the Data and FAT caches? I currently have both set to 32, which results in a little over a meg of memory. Is there another combo that would likely make more efficient use of that one meg?

My Iomega SCSI Zip was a refurb, and has given me no problems.

I've also purchased refurbed items from other companies (my Canon BJC-4200, Okidata OL600e, GE caller ID speaker phone), and have not had any problems with the printers, and only minor problems with a couple of little used buttons on the phone (but that might be a design flaw).

In general, I think most refurb'd products are MORE trustworthy, as they have already had their problem, been fixed (if necessary...I suspect many refurbs are just customer returns that were missing items, etc.), and tested...or certainly that is the way it should be done.

5683. Re: Need UMAX Scanner driver

Newsgroup: comp.sys.atari.st
Date: 1998-03-20 00:00:00 UTC
From: Nima Montaser <nima@nortel.ca.DEATHTOSPAM>
Message-ID: <3512B547.487B@nortel.ca.DEATHTOSPAM>
Source record: 105039

Hi,
Since ScanX (from Homa Systems) supports both UMAX and Microtek
Scanners, the driver is identical. In terms of scanning capabilities,
the scanners are a bit different:
i.e., Microtek Scanners support Halftone scanning while UMAX doesn't.
Both Scanners support mono, grayscale and color scanning.

Homa Systems is now developing a driver for the newly released Microtek
Scanners. It is nearly ready, it just needs to be tested thoroughly.
Currently,
for Microtek, it supports:
E3, E6 & 35t+.
However, with the new driver, it should support:
E3 plus, E6 plus, V300, V600, ...

In terms of UMAX scanners, it supports ASTRA 1200S/VISTA S12, Vista S6,
PowerLook II, .. The ASTRA 600/610S is only supported for mono and
grayscale scanning.

In terms of scanning quality, all to my opinion are nearly the same.
UMAX is alittle bit faster. For 600dpi, or better scanning, I like the
UMAX ASTRA 1200S, compared to the E6 from Microtek. The reason is that
the color scans look a bit more softer.

For more info, contact Homa Sytems Web page at
http://www.magma.ca/~nima

I believe that the interface for both programs are identical. Since the
scanners themselves are similar, I suspect the differences between the two
scanners from the Atari point of view are pretty small. I admit, however,
that I don't know this for SURE.

I find the ScanMaker E3 to work fine with ScanX, although I'd love to have
more features. It does the job, though.

5695. ICD service

Newsgroup: comp.sys.atari.st
Date: 1998-03-20 00:00:00 UTC
From: Paul <l@hate.spam>
Message-ID: <01bd545b$de23fee0$170672d1@rambler.ic.new-ulm.mn.us>
Source record: 105051

I live in the USA and have always liked ICD products. They have cut their service hours, years ago, to the point of not really offering any telephone service at all - what, 6 hours a week? And often then, no one answers anyhow. That's ok, I understand, no money for that kind of thing.

But, they have a pretty nice looking web page. They were running some specials, and it seemed to be web-only ordering. I went ahead & ordered some stuff. After the fact, I realized they do not have a secure web ordering site, and that my credit card info was 'out there'.

Well, that was back in January sometime. No e-mails are answered, I can't get ahold of them on the phone (when are those 6 hours a week again???), no product, no nothing.

I am very sorry I ever sent in an order over the internet. I am very sorry I ordered directly from ICD. I have no clue if they have my order, if they will fill it, if they have canceled it, or if they give a damn about anything.

In short, I am very frustrated with the non-treatment I've gotten from ICD. What are other people's views?

5697. NextGen review of Once Upon ATARI video

Newsgroup: comp.sys.atari.st
Date: 1998-03-20 00:00:00 UTC
From: hsw@netcom.com
Message-ID: <6evdd1$440$1@nnrp2.dejanews.com>
Source record: 105053

This is the unedited review of the video documentary "Once Upon Atari"
in Next Generation magazine (April '98 issue, page 20).
You can also check out the website for this video at:
http://www.netcom.com/~hsw/ouatari.html or http://www.netcom.com/~hsw
Here it is:

Once Upon Atari: The Agony and the Ecstasy

video review

The culture at Atari's console division in the glory days of 1979-1982 has always had a mystique about it. It was the seminal videogame development "scene," and many myths and legends grew out of that time. During last June's Electronicon, a Philadelphia fan convention, Howard Scott Warshaw, creator of E.T. and Yars Revenge, premiered a new documentary, Once Upon Atari: The Agony and the Ecstasy. It is actually the final installment of a planned four-part series that explores those days by interviewing the programmers who created some of console gaming's best-loved (and most hated) titles.

While the video quality sometimes leaves a lot to be desired (the introduction is almost unbearably cheesy), the interviews are amazing. Warshaw has tracked down almost everyone who did anything of significance in Atari's home division, including the people involved in some of the most criticized events in Atari's history, like Pac-Man for Atari 2600 (see "What the Hell Happened?" page 38). The interviews are seamlessly edited together with very little narration, which is good if you are familiar with Atari's history - for those who don't already know most of these names, though, the video may be a bit confusing.

This episode tries to capture the spirit of what it was like to actually work at Atari, an environment that was both a product of the times - the free-wheeling '70s - and the need to hire anyone who could program the 2600, a feat that ranged from difficult to impossible. This quote from Todd (Pac-Man) Frye is typical: "They were having a problem getting a programmer to do the Atari 2600 Xevious. Xevious was a very graphically active game in the arcades, and the Atari 2600 was not really a very graphically active machine. So I went home - I smoked this joint, with a little psilocybin and a little cocaine in it - and all of a sudden it sprang full forth in my mind exactly how to do it. And that was the moment of inspiration."

Other installments will include Nolan Bushnell, Larry Kaplan (Activision, Kaboom!), Rob Fulop (Missile Command), and others, disclosing their personal feelings and stories about everything from the creation of Activision to some of the pretty outrageous sexual (mis)conduct that went on between employees. The remainder of the series will be released later this year. The first episode will cover what it was like to actually work at Atari,

the second will deal with the legendary three M's of Atari (marketing, management, and money), and finally the third - and possibly the most exciting - will detail the game design process at Atari.

The highly in-depth nature of the documentary offers a refreshing contrast to other efforts, like Leonard Herman's Phoenix (see review NG 37), which, in their attempts to cover a broader subject matter, are necessarily more impersonal. Is this video essential viewing? If you're simply interested in the broad history of the industry, probably not. But if the word "Atari" still can make the hair on the back of your neck stand up, send in your money ASAP - you won't be disappointed.

Available in NTSC or PAL. Running time: 28 minutes.
To order, send $29.95 (postpaid) to:

SCOTT WEST PRODUCTIONS
PO Box 610787
San Jose, CA 95161

Or call with credit card: 1-800-711-3627

A SCSI ZIP drive sure if you run it with HD Driver. Forget about the
parallel port version though, the Atari printer port is too different to
make a ZIP drive work with it.

SH>whenever I tried to use it I got a "Not implemented" type of warning.
Just use the IMG printer driver, it exports a file as IMG format.
I think I may have used the Degas export module once, but I don't remember
if it worked. It's not likely to be very useful for most work seeing as
degas format is limited to the 3 basic ST resolutions. IMG doesn't suffer
that limitation.

I think your download figures might have more to do with Demon's news
server than STinG. POPwatch retrieves mail for me at anything up to
2000cps with the latest modules (STE w/14k modem). Demon's news server
has been getting progressively slower over the last few weeks.

YMMV, of course.

re: 3d vs 2d...

Your argument regarding "since the projecting apparatusis 3d, then the image must be 3d" breaks down when you consider a slide projector. When it projects an image to a theoretically perfect screen, the image itself has no depth unless you look at light as a particle. But so far we have not been able to resolve the particle/wave dispute. My own idea is that it is something _else_, that we as humans in our particular frame of reference cannot see it as it is. Perhaps it is 4-D or more in nature, and humand find it difficult at best to perceive more than 3 simultaneous dimensions.

You might wish to set up a program like Midi-maze if you can get two ST's and some Midi cables.. We have done that for many years out here in San Diego at the Annual Computer Fair to show off the ST and provide some entertainment for attendites also.. They seem to get a kick seeing them play Midimaze and then seeing them in the Computer Musieum which displays many old computers many of which I'd never even seen and I've been dealing with computers for about 18 years now since my brother purchased a Atari 800..

> that'll be the reason.

The base64-encoding knows no headers (read RFC2047 if you don't
believe it).

BTW, is there still no base64-decoding software available for
Atari? For another purpose I've written a tool which
can perform various encodings/encodings used in the internet
including base64, quoted-printable (in arbitrary degrees
of "mailsafeness"), charset conversions between atarist,
iso-8859-?, ibm-pc, hp-roman8, ...

The major difference to other similar tools (mimencode, GNU recode, ...)
is the possibility to perform an arbitrary number of encodings/
decodings in one go without ever using pipes or temporary files.
For example:

encode lf2crlf:latin2st:unqp mail.txt

would first "un-"quote-printable mail.txt, then it would convert
the text from iso-latin-1 (aka iso-8859-1) to the Atari charset
and then terminate all lines with Carriage Return/Linefeed.

I think the tool would be a little overkill for simply decoding
e-mails but if there are some people intererested out there ...
(and if they don't ask me to build a GEM interface for it).

Ciao

Write to Holger_Weets@ol.maus.de. He will probably tell you that
C-desk isn't supported any longer. I would send you my copy but
it's no use if you have Sozobon >2.0. The options to the compiler
have changed with 2.0 and C-desk has "hard-coded" options.

Better learn how to work with make.

What version of STinG are you using? If it's later than v1.08 it could be
that you're one of the unlucky few that have a slowdown with the newer TCP
modules. I use the TCP module from v1.08 and I get upto 2800 cps with it.
With the newer TCP modules this drops to ~200-300 cps, although the latest
one with the FTP upload bugfix is capable of an upload at 2600 cps. These
upload figures came from aFTP, the download figures come from NEWSwatch.

If you can get hold of the older TCP module, it should speed the transfers,
at least for downloads. If you need to be able to upload as well, it will
mean renaming modules and rebooting to get the best transfers each way.

I'm just a little bitter from what I consider being betrayed by the Trammels. After hearing so many times that 'this year' would be 'the year of Atari' only to see them only market in the New York City area or maybe a couple of other local areas, it burns me up. I tried to do my part by buying hundreds of dollars worth of hardware and software only to see it become worthless as fewer and fewer places supported the platform. I hate being at the mercy of Microsoft. But what's the alternative? Even the Mac may not last much longer. I suppose if my needs were simpler, I could get by with my old 520 ST running Word Up etc., but for my needs, it won't do. There- I got that off my chest.

You said:
-> re: 1 dimensional games...

-> I think PONG is the closest we will get to a '1-Dimensional'
-> game.

As the defination of dimension is: The smallest number of independent points that give the location of a unique point in a mathematical space.

Therefore we can assess that a characteristic of a one-dimensional plain consists of points leading from and to a unique point in a coherent manner. I mean a single straight line of infinate length but the width and depth is of that unique point itself.

A two-dimensional plain thus adds an infinate width plus the length and defines an area of two-dimensional space. Pong thus fits into this catagory among all other vidio games. The third dimension incompasses an infinate depth from that unique point. No games displayed on a monitor can achieve a three-dimensional characteristic for the depth is a perception of an illusion because what's displayed has no actual depth or volume of mass despite of that ludicrice argument about the pixels or the CRT making the image three-dimensional.

One can say that the fourth dimension is time, a constant that never changes and the fifth dimension that extends into the meta-physical.

But what the hell this has to do with Atari being sold is beyond my comprehension.

Later,
James

>>replace a original drive inside the box with a bigger SCSI drive.
>>Is that possible ? Are ther any ACSI/SCSI compatibility problems ? What
>>should I do to make the replacement ?
>>

No, it is not possible.
The Megafile 30 has a RLL formatted disk (mine had a Seagate ST238R) and
is not SCSI. Although there is a SCSI host adapter integrated in the
board somewhere.
But, you can replace it with a larger disk. Use a MFM or a RLL disk.
I replaced the ST238R, since I had 10,000 bad sectors, with a NEC
D5126 20 Mb MFM drive which I formatted with HDX as a normal Megafile 30
disk. Now I replaced it with a Maxtor XT-1140 120 Mb MFM disk, which I
formatted and partitioned using CBHD V5.02 (HDX failed), so I now
have a 180 Mb disk.

You can format almost any MFM disk as RLL, giving you 50% more.

Hint:
If you want to use HDX to format a MFM disk as RLL then just add the
drive info (number of heads, etc.) in the wincap file.
MFM disk ussually have 17 sectors/track. RLL uses 26 secters/track.
So use 26 sectors/track in the wincap file.

5720. *I* bought Atari

Newsgroup: comp.sys.atari.st
Date: 1998-03-20 00:00:00 UTC
From: bales@hol.REMOVE.THIS.fr
Message-ID: <MPG.f7c57ad221202e498968d@gazette.stortek.com>
Source record: 105113

Haha, I knew a subject like that would get some attention.

Actually, I've just (at last) bought a Falcon. It's a new machine for me, and I've never used one before. I must say that for the moment, it's a great improvement to my Super-4Mbyted-TOS-2.06-running-internal-IDE-driven-HDfloppied-STE-from-hell.

However, no docs or disks came with it. What actually was shipped with the Falcons ? was there some version of Speedo, MultiTOS, some special CPXs or TOS patches? Heck, the guy I bought it from didn't even have XControl on it.

If tha manual is anything like the STE's one, then I'm not losing much, but after opening up the beast, I would like to know what the various components and sockets are. There are connectors and jumpers all over the place. It's a TOS 4.04, is this the latest ?

Is there anything else really necessary I should download. I realize I should get NVDI or MagiC, but the main financial priority is going to get the buffer/clock fixes done for digital audio and probably and external SCSI drive.

Does anybody know if Cubase 2.0 runs on the Falcon. I think 3.0 does, but this version doesn't seem to see the dongle.

Also, is there some audio D2D software that can run on the falcon in sync with the old Cubase 2.0 I have on the STE, so I have the STE for midi and the Falcon for audio?

Either this or I sell the super-STE-from-hell and get CAF, but it's still pretty expensive.

Cheers,
Nick

Robert Schaffner wrote:

> Right. But you NEED MagiC or any TOS >1.4

With the current versions of HDDRIVER you don't need Big-DOS or MagiC if
you want to use media with *a single* DOS compatible partition. In this
case you can create a partition that is both TOS and DOS compatible and
doesn't require additional software on the Atari side.

Quick Sale (I need the room!)

Stunning 21 inch flat screen EIZO multisync monitor, bnc
analog and ECL (TT high) inputs, max resolution 1600x1400
at 70Hz, as new (very low use). Paper white (mono) display
ideal for dtp, midi, cad etc..
This display cost well over 1200 pounds and is as new,
offers around 400 pounds.

Email Dr Simon Williams at WilliamsSG@cf.ac.uk or
svp@csi.com.

It would be preferable to sell this within the UK unless
buyer is prepared to cover shipping costs!

5724. Help, VCS on ST.

Does anyone know if it is possible to run the old 2600 VCS cartridges on a ST by downloading the software on them to my ST via the cartridge port? and if so how as I assume you would just plug them together.

5725. CAB and NOVA VDI

Newsgroup: comp.sys.atari.st
Date: 1998-03-20 00:00:00 UTC
From: roughley@HORMEL.unix.dsoe.com
Message-ID: <6etuiv$oop@thoth.portal.ca>
Source record: 105118

It seems the memory problem with CAB and NOVA VDI _is_ related to the type of animated GIF being viewed. The problem is caused by some GIFs which use a local color map and have a special Netscape palette extension. From my limited experience, these aren't normal GIFs <g>. There could be other variables, like transparency, but I'm not exactly sure what combination thereof causes CAB to continually use up RAM for each frame repetition. Thanks to Magnus for not thinking I was crazy, as he sent me one of those nasty animated GIFs to look at.

>said "Laser" on it.

try and find out if it's an SLM804, bad news if it is as you won't easily get toners and drums.

The 605 is a much better bet, the Mannesman Tally MT906 shares the drum, toner and the 10,000 print counter that stops you from using the drum for longer.

>I thought about picking it up, but I haven't decided for sure whether or
>not I will, as I'm limited on space here. Can anyone give me advice on
>whether or not this would be a good addition to my Mega ST4? Are toner
Apart from the points I've mentioned, both printers are ideal partners for your Mega, offering the quickest printed page of all the available printers.

I vaguely remember something about this, but it never saw the light of day.

I think that it was meant to allow you to print at 600*300dpi - some sort of
hardware fix that I at first thought the Phantom of the Laser thread was
about.

>Is there somebody using this capability and is it possible to run the
>driver on the SLM605 ?
I think that it was for the 804.

>Perhaps is it also a little hardware modification but I don't remember
>now ...
That's it.

Sounds a bit silly. Why on earth would a Motorola 68K-based machine be
designed to play antiquated 6502 processor VCS games when it has one of
the richest game software libraries itself ? The only thing a VCS has in
common with an ST is the Fuji logo (and the joystick sockets).

Try plugging your cartridges into a PC's AGP slot to see what happens.

I have a selection of Atari ST titles for sale.

This List Updated 20/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

5736. FS, Swap PX: STE SIMM memory upgrade

Newsgroup: comp.sys.atari.st
Date: 1998-03-20 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <890409314.5833.3.nnrp-03.c1ed1184@news.demon.co.uk>
Source record: 105129
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,alt.atari

I have some 1 meg SIMM's ideal for upgrading your STE.

Upgrading from 512k or 1024k/1 meg to 2 meg .... 12.50 UKp (Sterling)
Upgrading from 2 meg to 4 meg ..... 12.50 UKp (Sterling)
Upgrading from 512k or 1024K/1 meg to 4 meg .... 22.50 UKp (Sterling)

Along with the memory, you will get fitting instructions and a disk of
utilities.

Sorry, UK and Europe ONLY.

Cheers! for now
Steve

Re: "CAB Cache", csilver@Puke.On.Spammers.com scribbled the following on 20 Mar 98 @ 07:33:06:

c> When I first started surf'in with CAB v1.0, I saved the wwwcache for
c> future use. However, that was with my 1040ST with a 14.4 modem. Now
c> with a Falcon and a 56k modem I don't fill this is at all neccessary. I
c> dump wwwcache in a 5meg RamDisk (faster downloads than a HD) and it's
c> deleted after every session. If I find a site that's worthwhile, I just
c> Hotlist it (35k file).

A ramdisk is going to make very little difference in the speed of a download compared to downloading to any modern hard drive, especially if you use a write cache (I use WBDAEMON). And certainly any speed gained is more than offset by the downloading of graphics everytime you go to a site, even if you go there every day. That makes no sense to me to flush your cache at the end of each session, unless you're really strapped for space. I visit probably 30 or so Web sites fairly regularly, and I couldn't imagine having to download their graphics each and every time.

c> IMHO, large wwwcache files are just ripe to get corrupted and waste a
c> lot of time. Why? Most good Web sites change their design, so you'll
c> just have to reload'em anyway. I can't think of any good reason of
c> keeping such a large cache.

In reality, most Web sites stay with basically the same graphics for a very long time. They change certain parts of their pages, yes, but most of their graphics remain the same indefinitely. And those that do change, Cache Cleanup can take care of the unused graphics.

I'm not sure what you mean by corrupted cache files. I've never had that (unless they were incomplete downloads to begin with).

c> Keep in mind ALL browsers crash from time to time, which can do nasty
c> things to the cache.

I've had CAB crash many times and it's never done anything nasty to the cache. What could it possibly do? At worst you'd have to delete the cache and start over. What's the big deal about that?

c> There's more than one way to "skin a cat". IMHO, don't push CAB/cache
c> to it's limits :)

Well, I have my new 2.1 GB drive up and running, and decided not to push CAB too far, not because of your concerns, but because I was afraid a 100 mb cache would just slow things down way too much. Instead I'm now using a 50 mb cache (about twice what I was using before). I started over, so it will take awhile to fill up, and then I'll see how it goes. I can easily go

either direction on the size if I'm not satisfied.

Thanks for your comments.

Umm well I was just boming along through the Hades Web pages and I
came to this bit

The complete system, inclusive medium-designtower, 68040 processor
with FPU, 4MB RAM,
harddisk, floppy, graphic card, PC-keyboard and mouse is available
for 2600.-sFr.

Last updated 23.12.1996

Am I missing something?
2600 French Francs = 254 Pounds Sterling = 425 US Dollars
You can buy second hand ST's for that in the UK

Or is this the actuall price I'm reading

does anyone have an idea of the current price?

Please help

This didn't work with the NOVA.

I've updated the animated GIF test page with a transparent one to show
the affect it has with the NOVA VDI:

Just a thought here, But as Hasbro now own ATARI and that includes the name... Everyone is dreaming of all things nice....

But what if Hasbro decide they want full control.. how many of us use the name ATARI in email or web page or whatever.. Hasbro could tell us to stop couldn't they?..they may not want people calling themselves atari or using the ATARI name or logo... well it is there's...

Sorry but everyone is looking on the bright side.. I just thought I would throw the "Cat amongst the Pigeons" as they say :)))

From: james.burr@acpu.com
Message-ID: <890490422@acpu.com>
Source record: 104999

I finally got hooked into the internet yesterday. I was browsing through the news section of Atari Gaming Headquarters (http://www.atarihq.com) when I came across an article about the seriousness of trouble that JTS is in. It stated that when JTS took over Atari that they promised the investors holding Atari stock that they would continue developement for Atari software and products. Well everyone know they didn't keep that promise and no-one is more pissed of than the investors so they filed a class action lawsuit against JTS for a breach of contract on conditions of the purchase of Atari.
Now, I not very savy when it comes to business but doesn't it seem odd that the Tramiels leave Commodore which they founded (which did well after they left) and went to Atari and drove that company into the ground then make a move with JTS and drive that company into the ground?

I mean JTS was doing well before the Tramiels got involved with them and now they're in serious trouble. I see a pattern here developing and it's giving me the willies pondering it.

Later,
James

Re: "CAB Cache", csilver@Puke.On.Spammers.com scribbled the following on 21 Mar 98 @ 05:24:37:

c> Hi Terry. Well, A RamDisk is about twice as fast as my SCSI EZ 135.

But how much actual time do you think that saves you while surfing the web in a given hour? Compare that to the time saved by having graphics already on disk when you visit a familiar site.

c> If you visit a lot of graphics/text intensive Web sites, you might try
c> booting in ST mono and turning the graphics off in CAB. With my
c> Falcon/Nemesis/NVDI/ etc., this is the *fastest* way I know to
c> download/view Web sites, at least with my setup.

I wouldn't actually call that "viewing" Web sites. I did go that route for awhile, and loved the speed at first. But after awhile I got very bored and went back to using graphics (in high color). To me, surfing the Web in text mode is like listening to TV with no picture.

c> Ahhh, I have gotten some orphan files as well as folder problems
c> which can't be deleted by normal means.

Never had that happen even once. <knock on wood>

I'm not sure why you think this is odd... It's par for the course
where the Tramiels are concerned. No conspiracy behind it, just
proof that the Tramiels are truly fuktup businessmen. What's scary
is that JTS was interested in letting them onboard in the first place.

From: ad329@james.hwcn.org
Message-ID: <6f1363$8uf@james.hwcn.org>
Source record: 105005

In article <6ett3g$3nt$1@lyra.csx.cam.ac.uk>, sgm23@eng.cam.ac.uk (Stephen Moss) wrote:

>Does anyone know if it is possible to run the old 2600 VCS cartridges on a
>ST by downloading the software on them to my ST via the cartridge port? and
>if so how as I assume you would just plug them together.
~^~^~^

a parallel port. You can then use special software on your PC to
send the ROM dump into the RAM card. Some RAM cards even function with
all the various bankswitching schemes used by 2600 developers.

Apart from that, you can modify an old 2600 cart to work with an EPROM.
Then use any computer with an EPROM burner to make your own 2600 EPROMS.
(Incidently, does anyone know where I can get an EPROM burner for the
ST and how much it would cost?)

Recently someone on one of the 2600 programming E-mail lists uncovered
a 2600/7800 development kit for the ST. This includes some really powerful
development software that let's you wrote code for the 7800 and 2600
(it's primarily a 7800 development tool).

It uses a special card that plugs into the 7800's cartridge port
and connects to the ST through it's parallel port. We're looking into
reverse engineering this card now (and possibly making a special 2600
only version of it) so that ST users won't be left out in the cold
when it comes to 2600 video game development. Although a
2600 BIN to Supercharger program for the ST would really be the best
solution and I'm hoping that an ST programmer with knowledge of C
will take up the task of porting the Amiga's development software
to the ST. It just doesn't seem right that the Atari computers should
be excluded from 2600 development.

In anycase, for more information on 2600 programming, and the atari
2600 in general you might want to check out.

rec.games.video.classic
alt.atari2600.programming

and these two E-mail lists

stella@biglist.com
(I think the subscription address is stella-subscribe@biglist.com
and the word subscribe has to appear in the body and/or subject)
gametech@rbkc.gov.uk

Then there are a large number of 2600 webpages out there.

http://www.novia.net/~rcolbert

This site contains all the development tools needed to write 2600 games
and play the BIN files. It also has lots of programming information as
well as samples of Bob's new 2600 games.

http://www.biglist.com/lists/stella/archives

This is an archive of all the traffic on the Stella email list. You can
also find the .BIN files for new 2600 games here too. Definet good
place to start if you want to learn to program the 2600.

Hope this information helps you out.

CRACKERS

In what way did the T's drive Atari into the ground when they acquired it from Warner? If I remember correctly, Atari was losing at least $1 million PER DAY before they took over. If they drove it into the ground, it was only after they resurrected it in the first place.

FS: Atari items. ALL OBO Saturday march 21

HARDWARE (no manuals or software)

1.1040STf 1MB ram. TOS 1.4 This machine has an audio output jack (RCA female) so you
can plug in to your external amplifier. Listen to the robot voice or your games loud!! No need for a
pre-amp. Will go with its famous BEETLE mouse!. $62

2. SC 1224 color monitor. It needs detachable video cable $16 (I can give you one that needs
a connector at the other end (free).

3. SC 1224 color monitor. with non detachable video cable and power cable. works great. $24

SOFTWARE:

1. TRUE PAINT V 1.02 $14 Excellent drawing program; all resolutions and colors. Works in ALL
ataris. From B/W. to true color. Manual available.

2. ICD hard disk utilities Version: 6.2.3 2 disks no manual $10. I will send a list of the files upon request.

3. PHOTO SHOW 1.0 by It's all relative: Create multimedia presentations audio video; Also watch
kodak photo Cd's in PCD format. This prg. will go with PCD sampler vol CD-ROM $15 (Falcon).
Needs Multitos.

All OBO. Questions welcomed. If interested send ZIP code to ask UPS for charges.. For software I can
send it for $3.00 US. (If you are in the US; I am willing to send abroad also). Phil.

PS: This messages overrides all the others posted before.

5775. Electronic Cow releases new software

Newsgroup: comp.sys.atari.st
Date: 1998-03-21 00:00:00 UTC
From: electronic_cow@dial.pipex.com
Message-ID: <6f1sd5kmu1@nnrp1.dejanews.com>
Source record: 105018

Electronic Cow are pleased to announce the release of two new music software packages for the Atari!

****
Scribble Synth (Price 16.00 UK pounds
plus postage)
****

The first program, Scribble Synth is another
software-based sound
synthesizer, in the same vein as Electronic Cow's
previous release Snippit
Synth. However, the synthesis model used in Scribble
Synth is completely
different: it's a true additive synthesizer, but with a
difference! You
actually draw in frequency envelopes with the mouse!

How it
works:
These mouse 'scribbles' (of which there can be up to five per sound)
are
transformed into 2D frequency spectrum plots by the software
automatically.
Both low and high frequency bandwidths can be defined, and up
to twenty
bands can be comprised in one 'scribble'. These plots are then
placed in
the time domain, and Scribble Synth interpolates individual
envelope shapes
for each frequency band!
The results are quite amazing!
Strange sci-fi warbles, time-based pitch and
filtering effects, plus
frequency modulated sounds are all possible with
Scribble Synth, as well as
some REALLY deep bass sounds!!!
Sounds can then be exported to tracker
programs, direct-to-disk
sequencers/recorders, and sample editors in either
AIFF, AVR or SPL
formats. Both eight and 16-bit formats are supported, and
ANY frequency
between 8 and 50KHz!
Scribble Synth will also allow you to dump

the sounds via MIDI to an
MSDS-comaptible sampler, or the Akai S900/950...
Scribble Synth's main features include:
* AVR/AIFF/SPL 8/16 bit sample
export at any frequency (up to 50KHz)
* Digital audio playback of sounds
on the Falcon and STE/TT
* MIDI sample dump for Akai S900/S950 and all
sample dump standard samplers
* On-line help utilising ST-Guide, plus an
eight-page CD-booklet manual

Scribble Synth requires at least one megabyte
of memory and a 640 x 400
display to run. Because of hardware limitations, no
audio playback is
available on the STFM, but you can still generate samples!

****
EC-909 (Price 25.00 UK pounds plus postage and packing)
****
Tired of the ridiculous prices for second-hand analogue drum machines? Wish
you had Re-Brith on the Atari?

EC-909 is an analogue drum machine emulator
for the Atari STE/TT or Falcon.
It features sixteen original TR-909 sounds
(including bass, snare, toms,
rim, clap, and cymbals), with various controls
(pitch tuning, volume
attenuation, and attack shape), and an interface
everyone will have seen
somewhere before!!!

EC-909 can create single bar
patterns (in real-time on the Falcon), and
then export them into your
direct-to-disk recorder or sample editor as AIFF
or AVR format samples. Both
8 and 16-bit formats are supported, as well as
mono or stereo options. The
program will also allow you to export the
pattern as a standard MIDI file for
loading into your MIDI sequencer! Other
features include: MIDI triggering,
tempo and bar length controls, and Undo!

EC-909' s main features include:
*
AVR/AIFF 8/16 bit sample export, either mono or stereo
* 16
unique TR909 style drum sounds

* Tempo and bar length controls
* MIDI
triggering for drums and pattern playing
* Exports patterns as type 1 MIDI
files
* On-line help utilising ST-Guide, plus an eight-page CD-booklet manual

There are two versions of EC-909; one for the STE and TT, and one for the Falcon. EC-909 requires at least one megabyte of memory (4Mbytes on the Falcon) and a 640 x 400 display. EC-909 won't run on the STFM because of the
lack of digital audio hardware.

For more information, visit our WWW page

Huh? If a game has x and y movement, it is two dimensional.

A vector used to describe the velocity of the "Pong" ball or "Combat"
bullet would need both x and y components.

You're turning simple math into something difficult.

If I learn what causes this I'd fix it immediately. However ATM I haven't
got the faintest idea where to look for it. It can be all TCP resequencing,
handshaking and retransmission. The problem is that bad because I never
see this striking, if I did, it were rather straightforward to find out.

Soon, a thorough check of the handshaking is on the agenda, I hope to somehow
find and fix the problem then ;-)

Cheers Peter

Hi,

There are hundreds of programs for making music and listening
to music which you can download at
http://www.hitsquad.com/smm/atari/

There is mainly ST software but there's also some for the
Falcon.

The site has software for midi, MOD, audio, recording,
multi-track, MPEG, soft synths, drum machines, guitar tuners,
samplers, patch editors/librarians, mp3 players, sequencers,
algorhythmic composition, and heaps more.

cheers,
jason.

: TCP/IP connection via the null modem, and use Telnet.

: Cheers Peter

I've used mgetty and Uniterm to turn a 1040ST into a vt100. I had trouble
getting things to work at 19200bps, but everything was fine at 9600. I wasn't
using hsmodem or anything on the atari, so that might be why 19200 didn't
work. Also I had hardware flow control on. I didn't spend much time with it.
Has anyone tried high speed stuff (like 115kbps with MSTE)?

After buying quite a few computers i've accumulated duplicates of

these items so their up for sale. I need the space!!! They goes
as follows:

Hardware: All with Manuals

* Atari 1040STf (1 Meg)/Broken Keys but still works ..... $ 25
* Atari SM804 w/Outburst..... $225
(Needs new drum and toner)

Hardware: No Manuals

* External disk Drive (Needs Power Adapter, Radio Shack) . $ 10

Software: All With Manuals

* Easy Draw ..... $ 10
* Degas Elite ..... $ 10
* Typesetter St ..... $ 10
* Stalker/Telecommunication Software ..... $ 20
* G+Plus ..... $ 10
* Migraph OCR/Optical Character Recognition Software ..... $ 10
* Mr Boston Official Bartender's Guide ..... $ 2
* The Juggler ..... $ 5
* Geneva/(Multi Tasking Program) & NeoDesk(Desk Top Prg .. $ 50
* Hyrid Arts Semte Track w/sync box ..... $ 75

Software/No Manuals:

* Hybrid Arts Ludwig Music software ..... $ 3

Games: All with Manuals

* F-15 Strike Eagle Flight Simulator ..... $ 10
* Elite/A Fantastic Voyage ..... $ 10
* Defender Of The Crown/Knight Fight ..... $ 10
* Knightmare/Knight Fight ..... $ 10
* ShadowLands/Barbarian Fighting ..... $ 10
* Barbarian/Fighting ..... $ 10
* Lemmings/Maze and Building ..... $ 10
* Ultra V Warrior of Destiny/Knights ..... $ 10
* Baby Jo/Baby Super Hero ..... $ 10
* Drakkhen/Dragons ..... $ 10
* The Pawn/Good and Evil Fight ..... $ 10
* Dragon Of Flame ..... $ 10
* Breach ..... $ 10
* Time Bandit ..... $ 10

* Quest Glory ..... $ 10
* Romancing The Throne ..... $ 10

Games Disk only:

* Dragon Master ..... $ 5
* Rambo 3 ..... $ 5

Programing Software & Book Combination:

* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari ..... $ 25

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST ..... $ 20

Programing Books:

* Prospero C, Language, AES Bining, Library, VDI Binding . $ 25
* Atari ST Internals/The Authoritative Insider guide ..... $ 10
* Atari ST Graphics & Sound/Mastering Capabilities ..... $ 10
* Peeks & Pokes/Hidden Secrets with in the Atari ..... $ 10
* Atari ST Application Programming ..... $ 10
* Atari ST Gem Programmer Reference ..... $ 10

Software Books with no Disks:

* Mark Williams resource Editor For The Atari ..... $ 3

I'm using the HP ScanJet driver from Homa, so I assume the Microtek
driver works the same way: Run the scanner driver as an accessory so that
OCR 1.4 can hook into GDPS and utilize it. That's about it.

ScooterPCB. There're demos available at the usual ftp sites and PD libraries
(esp. FaST Club in the UK).

The full English version is 50UKP IIRC from Peter West, email xlator@cix.co.uk

I can vouch for it working on a Falcon, PCB layers are shown in colour - and
it also works under MagiC.

Don't you just enter the path in one of the slots in 'Options'? This
can then be accessed by the drop-down at 'active Setup' in the main
dialogue.

>By the way, I've noticed that if one adjusts the settings in SMU-setup and

As a rule of thumb (depending on the available memory) set the number of
sectors for the FAT buffer to the number of sectors you get when you add
the sizes of all FATs. But basically this is all just a matter of how
many memory you want to spend for it.

He,
A ZIP on the ROM port is possible.
In Germany one can buy a ROM-port adapter for the parallel port
version of the ZIP. Price 119,-DM (incl. software)
You can find more information at http://www.inx.de/w+l/atari.htm.
I guess you've a SCSI-ZIP. If so you can use a *Link 97 ZIP*
hostadapter to connect the SCSI-ZIP on the 520 STE.
Price range from 149,- to 178,-DM
More info at http://members.aol.com.wbsystem

Neil Roughley (roughley@HORMEL.unix.dsoe.com) wrote:
: More tests: the CAB/NOVA VDI memory problem is caused by _transparent_
: animated GIFs.

: << Neil >>

I have a fix created by the author of CAB that might help Nova owner
with this issue.

It was designed for the Cyrel, Sunrise M16-1280 graphics card. This card
has on board chips for scrolling and panning and do not support the Atari
VDI unless the programmer of the application makes an effort to do so.
The card does not support GIF transparency.

The Cyrel, has some display problems using CAB it has to do with
transparency in GIF images. After, several Emailings to Alexander Clauss,
author of CAB, and Ralf Doewich of Cybercube, the lack if transparency was
addressed.

Here is how it works, change the filename of CAB.APP to CAB.GTP, when
activating the program this way you get an open application window to
type in parameters.

In the open window type in -transparencyGIF=off and click the OK
button, this enables CAB to display GIFs without transparency. I have
even tested this on the commercial demo of CAB 2.0 and it still works.

Good Luck!

5803. Re: Clearing Up Details of Hasbro/Atari Deal

Newsgroup: comp.sys.atari.st
Date: 1998-03-21 00:00:00 UTC
From: Jerry Cornelius <cptvimes@hotmail.com>
Message-ID: <6f0l6u$8qf$1@news.eclipse.net>
Source record: 105080
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy,alt.atari-jaguar.discussion

Thomas Main wrote in message ...
>Hasbro bought Atari assets for $5 million.
>These "assets" include the rights to 75 video game titles (they do not
>include any rights to redistribute computer or videogame hardware - this
>means that Hasbro cannot "reintroduce" any 8-bit Atari computers, ST
>computers, or Jaguar consoles, redesigned or not.
>One article I read mentioned that these games would be marketed under
>the title "Atari Platinum Series" - that is probably the extent to which
>we will see the name "Atari" on any of the new products.

Not that I'm disputing this, but doesn't the official papers say that they also have the rights to all the hardware they developed, including the computers and consoles?

On another note I'd be surprised if they released anything under the Atari name; I would have thought they bought the assets for the patents that Atari has been making from all the law suits.

Hi All (especially Hallvard) :-))

English language version of complete SMU Setup package is now available at:

http://www.cix.co.uk/~derryck/software.htm

I've also got MagicSLM which allows you to print from other computer platforms/Atari Falcon to an Atari laser printer via null modem or printed to disk file (needs ST with Diablo emulator and min 2Mb memory as server), and the full English docs for HSModem 7 - the same archive is also on some ftp sites.

In the future I hope to add full English packages of the Spin! CDROM XFS driver and the hard disk driver CBHD502 once I've checked on distribution permission.

Rgds, Derryck

>#FTP_PROXY_PORT = 8080 | as they are commented
>#GOPHER_PROXY = www-cache.demon.co.uk | out I doubt if this is
>#GOPHER_PROXY_PORT = 8080 | anything to do with it

>TIME_SERVER = ntp.demon.co.uk | I also have:
| TIME_ZONE = 0
| TIME_SUMMER = 03.30.10.26
| which wouldn't really
| affect the problem

From I'd have thought that the likely culprits are ICMP_GMT and
DEF_TTL, about which I know zip. Either that or it's to do with
masquerading about which I know less than zip!

HTH,
John

5815. [PUB] MIDI COMEDIE CDROM MULTIMEDIA demo available

Newsgroup: comp.sys.atari.st
Date: 1998-03-22 00:00:00 UTC
From: dipching@ping.be
Message-ID: <35150b783e20530@ping.be>
Source record: 104892

Right now, it's possible to download a demo of the Midi Comï¿½die multimedia CDrom at:

http://ping4.ping.be/dipching-drulkhor/MC-CD1.HTM

The page doesn't exist in english because the whole CD is french only ... It was really impossible to translate the whole thing including about 30 issues of the MC magazine and some of them are about 82 pages !!!!

The demo should work on ANY graphic card with this resolution:
640*480 in 8bits 256 colors.
Falcon owners should have 14 Mb installed.
Multimedia needs power.

Hadï¿½s and Afterburner owners, let test it and say what happen. Thank you.

Jo for Midi Comï¿½die

The final CD ROM will be available on 1st may 1998.

Yes

>2600 French Francs = 254 Pounds Sterling = 425 US Dollars
>You can buy second hand ST's for that in the UK

sFR= Swiss Francs. 1 Swiss Franc is more or less 3.50 or 4 French Francs.

Actually, you're pretty lucky if you can sell an ST for that price. A
520STF, even at 300FF here wouldn't go. Maybe you could get 700FF for a
1040STE.

>
>Or is this the actuall price I'm reading
>
>does anyone have an idea of the current price?

The base price of the Hades is 10000FF here, so that's more like UKP1000 and
US$2000

Just you wait until everything is in Euros (6.50FF= 65pence, hehe!).

8kb on pre tos 2.06, 16kb and higer on newer tos versions.

>If I add another hard drive, could I use more partitions? I think I
>heard that I am limited to 4 partitions.

4 partitions on one harddisk. I f you have several harddisks attached you can
have more partitions. From C to P on older tos versions.

In the course of running my business, I have people call and ask me if there are
any active Atari user groups in their area.

I would like to compile a list of active user groups that I could pass along when
customers ask me and perhaps also post a list of them on my website.

If you know of an active user group, please send me an Email at:

ComDungeon@aol.com

Please include as much info as possible: group name, presidents name, how
often they meet, meeting location, BBS and newsletter (if applicable), and a
telephone number and/or Email address where someone could be contacted
if more info is needed.

Thanks in advance for any help.

Unfortunately, I'll have to agree with you, Win95 (and it's crappy variants)
is the standard. At least as far as the game market is concerned. But for
serious applications, and far superiority of use is Linux and other Unices.

Anything you can think of that is proffesionally used is available for linux. Not to mention that all emulators come out for linux first then are ported to that other OS. And Linux can be run on anything with at least an '030....very nice....and Enlightenment rocks. But I do believe there is still hope for TOS. But it needs to make the jump to being on PowerPC, that is the wave of the future.....Just imagine having a TOS machine running at up 500mhz, (or whatever speed they have those things running up to, 500 is the latest I heard about 2 months ago). With Cheap PCI cards available and DIMM's being just a little more than SIMM's. You could make a killer system....and for those people who just HAVE to have Winsloth, than you could run SoftPC, or similar program on it, which would probably run as fast as a Pentium 200...or maybe even faster, maybe we should see if we can get benchmarks on that.....TOS PowerPC would be very cool though. MultiProcessor would be even cooler. From what I know (which admittedly is very little) in the Amiga world Phase 5 is making an ATX board with quad PowerPC's each running at least 100mhz on a 100mhz bus....(which is faster than the 66mhz bus speed Intel Pentiums have to run at unless you overclock them).
Sounds almost like what Wizztronics is doing, but more power.
Back to the original question though, I don't Hasbro intends on doing anything with the computers. But it really doesn't matter, since people are making clones. Atari should've done that long ago, as well as Amiga Technologies. I figure that's the main reason Machintoshes are dieing. Think about it. WinTel machines are only popular now because of all the games on them, where as most people with Atari's and Amiga's use them for proffesional Applications....it's the exact opposite than it used to be. Once again goes to show how far ahead of their time the latter computers were. Personally if I had more software availability for my ST's (I have a TT030, MegaSTe, 1040STfm) I toss my Winsloth computer in a second....or just use it for Linux/X.
Several things that would make TOS computers far more acceptible as a modern computer; built in OpenGL, Networking, inexpensive hardware (that's a big one, you can build a pentium 200MMX, with a high end 4mb graphics card, 64 megs of RAM, 6.4gig harddrive, 14 inch monitor 32x cd rom, AWE64. All for about $800). Although a TOS computer would not require anywhere near that much hardware, at least as far as harddrive space and RAM. Last but not least, Software availability. and if the developers had an easy way to develop high-end 3d effects(openGL) and fast graphics, all with the ease of programming on TOS, how could they really refuse?
I'm not really a programmer, but from what I've heard programming on a Winsloth computer is a hell of a lot harder than it is to program on any other platform, including linux.
Well, I've babbled long enough, this is just my thoughts on it, well at least some of them....laters, eh?

Jason

Well strictly speaking they are correct as they "did not acquire
anything from Atari", rather they acquired Atari from JTS. Splitting hairs I
know but that is the way some companies operate.

Yes, if I decode a UUE'd file and try to access it I get an 'Access Denied'
message from MagiC. If I delete it I get an 'Error 42' if I try to view it.
If I 'disconnect host' and view it I get no problems.

I *do* hit 'Esc' to re-read the directory before trying to access the files,
but I don't get the OFLS light being lit in MenuInfo. However, Shutdown for
Magic v1.6 reports open files on the partition and stops the shutdown process
until I've used Edge to clear up the HD errors.

This isn't related to my old HD problems - I got that completely fixed in
January.

r> On two occasions the corruption was so bad that my TT crashed while

I've never had it that bad. Edge tidies things up quite well and I usually
only have one or two bad files...

j> accurate record of the number of postings in a newsgroup. Before it
j> shows the overview it records about 13000 but after it records about
j> 1700.

This seems to be because the first figure is a count of how many messages have been received since the last message number shown in DEFAULT.GRP. The second figure seems to be the number of messages found on the server when you ask for the headers info - your provider may've aged quite a few messages off or deleted some of them.

j> I don't want to lose my contact with the Internet but Newsie seems
j> unstable.

Newsie's not perfect but I wouldn't want to demoralise John too much. getting around the problems seems easy enough (none if I ensure I disconnect host before exiting) and it's come on loads since v0.70.

A new feature I'd like to see is to grab the headers/overview, then log off, edit the headers I want to exclude and log back on to just download the messages in the edited XOVER.TXT. That'd speed things up tremendously.

I would like to get the XOVER.TXT files put into each newsgroup's folder instead of into the WORK directory as well.

d>
d> Yes, but the manual is actually for version 4. I didn't really know
d> what it was missing.

Well, by and large. it's only what's in the text file isn't it? It has been said, though, that the v4 English manual was very poor in comparison to the v2 manual which apparently had more technical details. Many people in fact asked for their v2 manuals back after seeing what was in v4 to help them.

I never used v2, so I can't verify this personally.

>> The boot resolution is handled in the #_DEV line in MAGX.INF - not
>> entirely sure whether this does the trick when used with Thing too...
d>
d> Too bad the manual didn't explain it as well as you have!

can I repeat this because you're not the first person to suggest it. I don't write this stuff myself - I save out other people's work. The #_DEV info came from a combo of Joe Conner, Oli Broadway and Martin Dryden, the bulk of the INF file was written by Henrik Lynggaard with some changes (probably all the mistakes <g>) from me.

d> But I thought MagiC could only boot in ST High res?

As it goes through the boot process, yes I think so. I've tried changing the NVRAM settings here on my TT and it didn't seem to make any difference.

As I said before, most of the credit goes to Henrik and the guys on CiX.

But I forgot to add something about this #_DEV information. Originally it was me who asked on CiX what the numbers meant and the information I posted was accurate for the Falcon, but not so for me with a graphics card. Seeing as there are several people here with graphics cards now, the following info that I discovered may prove useful.

==========
ssolutions/general #3732, from sidcelery, 2610 chars, Feb 25 01:57 97

In response to hamishtpb's message of 27/1/97:
>> #_DEV 8 16385
> My #-DEV line always has 1638*4* as the second number, unless this is
> something to do with the difference between the MSTE and the TT this
> may be the problem?

Actually it wasn't the problem. Neither does this second number relate to the way that the Falcon seems to use it, as reported by Martyn.

With my Crazy Dots II graphics card the first number relates to the Assign.sys screen driver, as stated by Joe, but the second number seems to be always 16383 plus the number of the line of the resolution selected in Magic's 'Change Resolution' menu option. If it's the first res listed, add one. If it's the second listed, add two etc...

You actually gave me the solution when I rang you, but I was reluctant to try it due to lack of disk space. Magic 5 has decided (when Magic 4 definitely didn't) that it can only find screen drivers in its own GEMSYS directory, rather than the GDOS GEMSYS directory specified in ASSIGN.SYS. I've always used D:\PUBLISH\GEMSYS\ to match my Timeworks setup and all installations of

six different versions of NVDI have picked this perfectly. Now, all of a sudden, it's a problem with Magic 5... B^{<

I'm sure there's probably a setting in MAGX.INF that'll sort this out, but which one is it? Could it just be #_ENV PATH=???? ?

This wasn't the end of the matter though. I could use the original NVDIVGA.INF, supplied by Andrew Lee with the card, and yours too, but my own caused fatal crashes (needing to boot into TOS, bypassing all my AUTO folder and Accs) on the mono monitor.

Again, it turned out that the defaults for the Crazy Dots II in VMG4000 v1.12 are wildly different to what actually exists. I was actually driving all the higher colour depths at 90MHz when the max of the card is 80.xxx! I'm surprised I still have a monitor in one piece!

Detecting the available dot-clocks in the way you advised sorted the problem immediately and I've now got a really nice set of resolutions. All's right with the world again! (Easily pleased...)

Btw, the mono monitor *can* stay connected with no problems - I just needed to disconnect the SVGA.

My maximum resolutions now are:

1280*960*2 colours
1280*960*16 colours (couldn't get either of these before!)
1184*880*256 colours! (only 1120*848 before, but some simple maths helped)
832*624*32756 colours
832*624*65536 colours
672*512*16777316 colours

Eat your heart out, Nemesis owners! B^{)

Now, if only I had the RAM or processing power to match... B^{<

Thanks for all your help, Paul - we got there in the end...
==========

I could've cropped the last part of the message out, but why should I pass up an opportunity to brag B^{)

t> reset. Anybody else have this problem and a solution? Thanks! ;-)
t>
t> PS Oh, I've never been able to use the Serial module from about 2
t> updates ago or so...I've always had to use an older version,
t> otherwise, it 2 bombs with my ISP right after the "success"
t> message in the STing dialer dialog window.

While I was offline the other month I tok the opportunity to go through the STinG docs and set it up as best I could. I've got it working now and use it instead of STiK - because it's being developed more actively and the author is regularly here, rather than any failure with STiK, because I haven't noticed any difference tbh...

However, I do get crashes with the CPXs - mainly SERIAL.CPX. I also notice that none of the settings will be recalled properly after being saved. I find that I keep getting reset to Modem 1 @19k2 with no flow control if I just let the normal bootup take place.

I think I've read the latest docs (I've got all the 10/3/98 updates) and the port setup doesn't seem to be saved to make modem 2 active. Should I be entering this CPX before starting the Dialler and getting it set up correctly for every session? Surely that can't be right... B^{<

Regards,
Harry

Yes, it does. I have no problem with Imagecopy in that department -except
that it takes about three times as long to load JPGs, so I install 1st Guide
specifically for JPGs and MPGs

If Guido is around, will this be fixed?

Where did you get NVDI ET4000 v4.11r7 from? Is it in English? Is it just
the executable that's updated or the driver files too, compared with v4.11r3?
There's a bugfix for Nova VDI at r5 AIUI...

g>
g> Was that Mr Waxy or Mr Conductivity who visited? ;-)

Both, of course. Not a good idea to use an electrical insulator on
electrical contacts %^{|

It took me and a mate 5 or 6 hours to reclean every contact (two positions
each) on both the underside of the keys and on the Mylar without scratching
off the contacts. Reassemble, work out which ones needed redoing, repeat ad
nauseum. Seriously bad news... B^{<

Anyway, I've done it now and all's right with the world and my keyboard. All
mis-spellings are down to me now <g>

Hello Fellow atarians,

I have just bought a hp color 672C deskjet printer and I am looking for a way to print some jpegs and gifs so that I can see the results from the printer. I have tried gemview but was unable to figure out how to print the image, and I couldnt find a help section in the documentation on the printing part. Is there any programs that are shareware that I can try printing an color image off of? I also just purchased NVDI 4 and I am using the hp dj 660 printer driver.

Greetings!

I just checked on the Computer Direct web site.
Instead of information about the DirecTT030 and
other computers, there was an in-process web page
regarding Digital Art's support for Apple computers.

Anybody know what's going on?

Thanks!

5853. The 9th Adventurers Convention

Newsgroup: comp.sys.atari.st
Date: 1998-03-22 00:00:00 UTC
From: Larry Horsfield <Alaric@larryhorsfield.demon.co.uk>
Message-ID: <DWXhsmAXPLF1EwVZ@larryhorsfield.demon.co.uk>
Source record: 105028

Hello all in C.S.A.St.

If you haven`t already heard about it, you may be interested to hear about the 1998 Adventurers Convention, which is being held in Birmingham (UK) this coming October, as it has been for the last 8 years.

The Convention is being held on Saturday, 24th October 1998, in the Ariel Suite of the Royal Angus Thistle Hotel, St. Chad`s, Birmingham B4, which at the end of the A38M and easy to get to from all parts of the country. It runs from 9am to around 6pm and covers all formats from Spectrums to PC`s, including Atari St`s. Tables are available if you wish to bring along your own computer(s) and we actively encourage this as we depend on those attending to bring their computers, so the more the merrier! If you wish to bring hardware and/or software to sell you are more than welcome to, but no pirated software please!

The event attracts adventure enthusiasts from all over the UK, including Northern Ireland, and the atmosphere is very friendly and informal. Many of us stay overnight at the hotel and the evenings can be just as lively and interesting as the convention itself!

During the day we have the popular "Megapoints" competition running. In this the contestants get 20 minutes playing time at a specially written Spectrum text adventure, with the object of scoring as many points as possible in the alloted time. There are usually cash prizes and special certificates for the 3 highest scores. The adventure this year is being written by Ulsterman Jon Scott, author of various Spectrum text adventures published by Zenobi Software.

Tickets are available now and cost 6 ukp per person if you buy yours before 30th June, 1998. Thereafter, or if you pay on the door on the day, the price will be 7 ukp per person. Tickets may be purchased from:

Vicky Jackson, 128 Merton Hall Road, Wimbledon, London, SW19 3PZ

Please make cheques/PO`s payable to V. Jackson

* * * * * * * *

HOTEL ACCOMMODATION:

The Royal Angus Thistle Hotel has special room rates for those attending the Convention. These include full English breakfast and are as follows:

Single Room: 37.50 ukp per night.

Double/Twin: 32.50 per person, per night.

Please contact the hotel to book your accommodation, NOT the convention organisers. The address and phone number are:

Royal Angus Thistle Hotel, St.Chad`s, Queensway, Birmingham, B4 6HY

Telephone: 0121-236-4211

Don`t forget to inform the hotel you are attending the Adventurers Convention, otherwise you will be charged the normal room rates!

NOTE: The Convention is on the weekend before the start of the Birmingham Motor Show at the NEC. Whilst the hotel have promised to reserve a number of rooms for us, you are strongly advised to book your accommodation AS EARLY AS POSSIBLE to avoid disappointment.

If you have any queries about the Convention, or would like to reserve tables for your hard/software, please contact me at the email address below.

Hope to see you in Brum in October!

Larry Horsfield

Computer Direct is not Apple-only, of that I can assure you. Chris is merely
working on his web site, and has not gotten around to adding the Atari stuff. He
has gotten very involved with Digital Arts, which is why it figures prominently in his
pages. He still does mail-order, though I am unsure about the Direct0x0 machines.
For that, you will have to ask him.

Leslie

I hadn't really noticed any difference with the news server, but even if
that was a problem, it doesn't explain why I have the same problem with
FTP, mail and browsing. Nor does it explain the differences below. BTW,
these logs were create by NEWSie using FTP-Server v1.03, both running
under Magic 5.11 on a 4Mb STE.

Canon doesn't supply the escape code sequences. They want you to buy a
$30 book. I refused, but now I'm stuck, because there seems to be no
way to get them. Couldn't find them on the Net either.

I don't read that mag, so I don't have to worry. :^)

I doubt if color depth has any effect on the speed of formatting text, anyway. Fonts would, but fonts have nothing to do with color depth or whether or not graphics are turned on.

c> I guess your a betting man, being from Vegas.

Not really. Most of us natives are smarter than that. :^)

I recommend you purchase Imagecopy. It will do a great job with that printer.

If you can find PrintAll, that's a freeware program that does a decent job of color printing on DeskJets.

No, TOS was never DOS compatible. The partition IDs are different and
the partition layout is different if partitions are greater than 32
MByte.

> hard drives is partitioned into 4: 1 TOS and 3 BMG. Using TOS 1.04,
> the first partition used 512 byte sectors, and the other three use
> 1024 byte (logical) sectors. I hear these sectors can go as high as
> 8k, giving a max of half a gig.

This TOS 4.0x the maximum partition size is 1 GByte, or to be more
precides, one sector less than 1 GByte.

> If I add another hard drive, could I use more partitions? I think I
> heard that I am limited to 4 partitions.

There is no limit on the number of partitions a drive can have. The only
limit is the number of partitions supported by TOS. Normally the highest
ID is P: but with Big-DOS and MagiC and a driver like HDDRIVER you can
have partitions beyond P:.

Note that Atari lifted the 4 partition limit way back in 1989. So it's
almost ten years now that you can have more than 4 partitions per drive.
Any TOS version supports this.

I have a Hewlett Packard too, and I just phoned them and they faxed me
all the codes I needed immediately. I can send you the uncompiled HEX
file for an HP600 (black and white) if you want to. You can start from
there.

You could UN-check the first box in 'Options' (File selector at
Program start'.

>-I edit what is needed, and for some directory (folder) paths I simply want
> to set a file mask (i.e. I've made a path for the AUTO folder where I want

Ummm ... I don't think that SMU understands multiple masks separated
by commas!

>-The new files, folders etc. have been added, but... trying the folders
> with the multiple file-endings now only has one filetype mask, namely
> the last one one in each line of several types!!!
> What gives???

I think the fault is that SETUP actually 'Saves' the multiple masks
even though such a list is invalid. When it re-loads the .SET file it
does the job 'properly' and only allows ONE file mask. It would be
better if SETUP errored the initial entry of multiple masks.

>>Not this one but, all of a sudden, START itself has refused to show

Ha! Fixed now. There was something naughty happening on C: where I
have the .INF and .SET files. I had managed to get 'shared clusters'!!
A Zorg re-build and re-install of .INF and .SET put it right.

5869. EZ 135 sector size

Newsgroup: comp.sys.atari.st
Date: 1998-03-23 00:00:00 UTC
From: Dave Gostl <dbg01@gnofn.org>
Message-ID: <Pine.GSO.3.95.980323044717.6113B-100000@sparkie.gnofn.org>
Source record: 104744

Hi All! My EZ 135 carts seem to have something wrong with them. They were partitioned with Diamond Edge as 1 partition of 134.? megs. But other software reports they only have 107 megs. I set the sector size to 8192 bytes in hddriver.sys as in the HDDriver 4.51 manual. So I tried to re-partition them with hddrutil.app, but it totally crashes (warm reboot) as soon as I select the EZ 135 drive. This is on a TOS 4.04 16 color Falcon.

So I figure there is something wrong with the sector size, as set by Diamond Edge, or as read by HDDriver 4.51.

Thanks for any ideas,
Dave

I see. Another problem at that time was, that most of the clients didnï¿½t
work on a Falcon with MultiTOS I was using.

And to be honest for me the installing procedure was too difficult and
time consuming. I appreciate to have an integrated package like
I-Connect, CAB and Fiffi.

It only took me approx. 15 minutes to get online.

O.K. I saved your message to a folder on my harddisk. ;-) I will try to
patch the NOVA-VDI at the beginning of next month. ;-)

BTW, do you know, if that is the reason why Kandinsky sometimes crashes
while scrolling? Although Dougï¿½s patch works with this program it still
crashes sometimes on my machine.

Yes, that's how to do it, Harry. I use COPS to run a handful of CPX at
boot-up and then disappear from the scene after a couple of minutes.
You don't actually have to 'Enter' the CPX, they just have to
initialise themselves using the previously Saved values.

I boot-up single tasking so Magcconf is one of these to set multi.
SERIAL sets up the right params for comms
NPRNCONF sets all the right bits for the printer

etc.

Byte's benchmarks show that the 266-MHz G3 (a.k.a. PowerPC 750)
Macintoshes are slightly more than twice as fast as the 300-MHz Pentium II
Windows systems. G3s are comming out in 300-MHz models, and 500-MHz are
planned. I would love to see the speed of a TOS system running fully
native on one of these G3s. If they can make MacOS that fast, imagine
what they could do for TOS.

Regards,

Tom

: related any longer.

Well, they still will sell off what they have (lots of parts and some
random items here and there and a couple of games) but overall, they have
dropped their support for the Atari line. If they don't have an item,
they will point you in the direction of either B&C or Best Electronics. Only
one person there is still dealing with Atari products.

There is no point in keeping a link to their web site as it only contains
info to contact them, and the two message boards. To find out what they
really have, you have to call them (or better yet go there, like myself)
and talk to Jennifer.

If they do have what you need, they will cut you a good deal though.

: Naturally I don't want to remove them if they still do Atari, but having
: looked through their site today I found nothing at all about Atari except
: a mention in the "the history of Toad" (or whatever) page.
: What gives?

I can view the decoded, ahem, document, it's the temporary article
itself that seems to be the problem. I haven't had much
trouble lately as long as I don't mess with the files while Newsie is
active. I am not using window buffers, if that makes any
difference. There are screen redraw problems with my NOVA scrolling
text from within a NEWSIE article window with that option.

5880. FS YAC Auction -- Final Update

Newsgroup: comp.sys.atari.st
Date: 1998-03-23 00:00:00 UTC
From: szhays@catbert.ucdavis.edu
Message-ID: <6f66uq$8da$1@mark.ucdavis.edu>
Source record: 104755

YAC Auction Update 3/21/98

Final update -- All final bids will be recorded in order of arrival (not submission) until one minute into midnight on the morning of March 28th. All winners will be notified and will be asked to do one of three things:

1) Request UPS C.O.D. ground. Shipping and C.O.D. charges will be added to the purchase price.

2) Request personal pickup. No shipping charges will be added and you can pay when you come visit us in Davis.

3) Request UPS or USPS ground shipping by sending the bid plus $20US for shipping. A refund or bill to make up for actual shipping costs will be sent within a week of the product shipping.

To bid, email to e.kaljumagi1@genie.com with your item name, e-mail address, and bid amount (Multiples of $5, please). Alternatively, call 707-279-0875 between 7-10PM Pacific Time. All shipping costs are the responsibility of the bidder -- contact UPS for pricing.

Item Description Current High Bid

A Mega ST 2 (2 Mb) $45 -- DM
B Mega ST 2 (2 Mb) $55 -- DM

5881. I need help with graphics-card!!!!

Newsgroup: comp.sys.atari.st
Date: 1998-03-23 00:00:00 UTC
From: Rolf Anders Storset <orcrist@online.no>
Message-ID: <3516A0FC.3C48A75A@online.no>
Source record: 104756
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi

I've recently bought myself a used Mega STe. With this computer I got a used Spektrumgrafikkarte (by Wilhelm Mikroelektronik GmbH) on the deal. Now I've been trying all weekend to get this card to work. The card is installed into the machine and I've formatted my harddrive (to ensure that there ain't any conflicts with other progs). After I've installed the HD driver, copied the autofolder from the HD utilities disk and run the install-program from the graphic-card disk, I'm resetting the machine. But during the boot-up, it crashes. How am I going to get this thing to work?!?!?!?!?!

Please help me if you can!
(any tips, hints and step by step guides are VERY appreciated)

Greetings Rolf Anders Storset
Norway

You need to watch out for HTML2TXT v1.5. It will be able to format tables
and do some other nice stuff!

More info can be found on: http://user.tninet.se/~jyc891w/gossip/

Thomas theres a review of html2text and your fruit machine in ST+ 26,
theres also a short review of your web page in the web ring section
where all web pages in the ATARI web ring are being reviewed

see the st+ web pages on how to get a copy :)

Cheers -- Tony Greenwood (Official Filos Examples Programmer)

I seem to have carefully filed various hints about the SM-124 monitor over a period of time but I have no advise or schematics for the SM-125... of course it is the latter which has just failed.

I have power on the red led and internal and external fuses are ok. Nothing evidently burnt.- don't want to mess around inside anymore, but may take it to the local TV repair shop and any helpful info may increase the chances of a fix.

I've seen similar? problems with HDDRIVER and my Jaz drive though my
AB040 is an additional complicating factor.

With HDDRIVER 6.13 I can let the Jaz spin down ok...but I musn't try and
spin it up by double clicking on a partition icon on the desktop or I
will lose access to that partition until the next reboot.
The trick is to wake the Jaz up by making an access via the
fileselector. Then the Jaz spins up ok.

I tried HDDRIVER 7.02 but had more problems with wrong partition
contents visible after the Jaz had shut down - If I remember correctly.
(It was seeing the contents of partition I for partitions J-O, whilst
Jaz partitions G, H and I remained ok)

I guessed that you would be doing your best to figure out what was
causing it. You seem very willing to help out and continue
development.
I was just curious whether there was any news.

It is strange how it only effects a few people. Is there a noticable
link? Perhaps we need a quick survey of the setups used by those
suffering.

Keep up the good work Peter it is all much appriciated.

Rich.

Here you can find some info to connect an atari (mintnet) and a PC (Win
95) with a null-modem cable... no Linux.
Maybe you can look for NFS for Linux.

5902. YAC Auction Ends This Week!

Newsgroup: comp.sys.atari.st
Date: 1998-03-23 00:00:00 UTC
From: ekaljumagi@clhs.lake.k12.ca.us
Message-ID: <6f6s03$6ic$1@nnrp1.dejanews.com>
Source record: 104777

YAC Auction Update 3/21/98

Final update -- All final bids will be recorded in order of arrival (not submission) until one minute into midnight on the morning of March 28th. All winners will be notified and will be asked to do one of three things:

1) Request UPS C.O.D. ground. Shipping and C.O.D. charges will be added to the purchase price.
2) Request personal pickup. No shipping charges will be added and you can pay when you come visit us in Davis.
3) Request UPS or USPS ground shipping by sending the bid plus $20US for shipping. A refund or bill to make up for actual shipping costs will be sent within a week of the product shipping.

To bid, email to e.kaljumagi1@genie.com with your item name, e-mail address, and bid amount (Multiples of $5, please). Alternatively, call 707-279-0875 between 7-10PM Pacific Time. All shipping costs are the responsibility of the bidder -- contact UPS for pricing.

5903. Falcon Running Players

Newsgroup: comp.sys.atari.st
Date: 1998-03-23 00:00:00 UTC
From: john.moffat@lion-nathan.co.nz
Message-ID: <6f75u4hkp1@nnrp1.dejanews.com>
Source record: 104778

Hi there,

Just wondering if there are any other Running players out there??
Especially anyone who has found the Yellow key on the 1st level yet ?!?!?
Yeah, yeah I know ! Pretty pathetic.:-(
I am now at the same stage I got to
in the demo version.... (rescued hostages, found TNT, can't open yellow
door....)

When I had the demo I thought it might have been a 'tease', but
now that I have the full registered version :-)), I am in the same
predicament.

The OTHER bad thing is that when I get to the open area in the
top North/West of the map to rescue the hostages, I get the FULL map
(wahoo!), BUT then I can't seem to go back into the rest of the area I
started in, to use it to check for secret rooms.
And by zooming out, it makes
it too difficult to

Any help/hints would be mucho appreciated.
I'm
surprised there aren't more people enthused and talking (read: asking for
help) about this game, I think it's pretty damn good for the Falcon, we need
more games ! ! !

Roll on Willie !

Also, if you could reply to my email
address as sometimes I miss stuff from Deja News.

Many, many thanks,

John
E. Cash

Fuktup business men my arse. Jack Tramiel was a lowly concentration camp survivor who came to america and became a self made millionare. You can't tell me that this man has no buisness sense. Your just pissed that he let Atari die as opposed to risking bankruptcy by trying to keep an ailing Atari afloat.

Nope. I'm not pissed. But I'm not gonna sugar-coat it, either. He
made millions and then he blew it. Had the world at his fingertips
but let it slip away. Every thing he touched after C-64 turned to
shit. I believe the phrase that most accurately applies to the man
goes something like "Spinning gold into straw."

5908. Re: Partitioning 2.1 GB IDE drive

Newsgroup: comp.sys.atari.st
Date: 1998-03-23 00:00:00 UTC
From: mhop@snip.net
Message-ID: <3515a964.693828251@news.snip.net>
Source record: 104927

I thought TOS _was_ DOS compatible. What's the difference? One of my hard drives is partitioned into 4: 1 TOS and 3 BMG. Using TOS 1.04, the first partition used 512 byte sectors, and the other three use 1024 byte (logical) sectors. I hear these sectors can go as high as 8k, giving a max of half a gig.

If I add another hard drive, could I use more partitions? I think I heard that I am limited to 4 partitions.

5909. GEMulator 98

GEMulator 98 forsale! With the ROM board with TOS 1.4/2.06 installed on it! Runs on Windows 95, Windows NT, Windows 3.1 and MS-DOS

Now supports Macintosh emulation!

The best Atari emulator on the planet! However, no longer have a need for it. Taking up a ISA slot. Will sell for $100.00 That is half of what you would pay right now for it.

If interested, e-mail me at tony_rau@ix.netcom.com

Thank you!

Hi There

It works fine for me set the paths and the set file in the preferences
(bottom left button and save) this will make the program load the
selected set each time it is started by default. Here you can turn off
or on the file selector etc at start up.

Yes, that's it.

CK> A simple access to one of the affected partitions spins them up
CK> again. I call it "manual power and noise save", very nice feature I
CK> think...

It would be if this part happened. Whenever I hit ^J the drive spins down
just fine, but then I'm completely stuck. I have a permanent busy bee and
can't access anything on the drive until I've physically cold-booted by the
power switch and left the macine off for 15 seconds.

I first discovered this with HDDriver v3.07 under TOS 2.06 on a Mega STe and
it's the same with HDDriver v7.04 on a TT with Magic v5.11

It sounds like it's my Fujitsu M2684S 520Mb drive tbh, but I don't know how
to sort it out... possibly jumpers?

Spot on - or if you're using MagiC you just run the scanner prog and leave
it in the background whilst you run OCR/Pixart/whatever else supports GPDS.

Actually, I'm doing the reverse of your setup -- I have this miserable Win95 system at home, used primarily for Internet access, and my TT030 systems and MegaSTe at the office for all of the 'serious' work. For me, its a 'relief' to go into the office and be able to work on my much more reliable Atari systems. They have none of the 'aggrevation factor' that seems to accompany anything new on this Win95 system; and none of the accompanying down time either. Turn on the Atari and it always works dependably and predictably. And its still 'fun' to work and play with.

Sheldon

: Yep, this is the Milan site -- Eric Hays, could you translate?

Well, er, that is _a_ Milan site, there are several. By the way, as long
as you are at the MUCS site, check out their new product Adamas. You can
read about it at http://home.t-online.de/home/MUCS-Hannover/produkte.htm

As for translating the Milan page, here's a crack (some poetic license has
been taken):

-------8<-------8<-------

Milan -- A new star in TOS heaven

[picture of cute mini-tower]

The new power-generation revolution for the TOS market!

Starting at 1,499 DM (that's $824 US).
pre-orders available.

<flaming> New </flaming>

Milan Specifications:

o Modern PCI and ISA bus system with 4 PCI and 3 ISA slots
o Motorola 68040 CPU
o 4 SIMM slots for EDO RAM (maximum of 512 KB)
o 2 x 2 IDE Ports, Serial and Parallel interface
o interface for PC keyboard
o Operating System on Flash RAM for easy updating
o Battery backed-up real time clock
o and much more...

Software:

o TOS 4.x (a complete rewrite -- smaller and faster than the original TOS)
o Optional loadable Milan Multi-OS, a modern multitasking filesystem with
modern 3D look and fully functional alternative desktop
o Telecommunications software for data-communications, VTX and FAX
o Modern textprocessing with Papyrus-Home with online help etc.
o Other useful programs such as a calculator, memos, etc.
o plus more...

Speed:

The MILAN achieves the following rates because of its modern bus system and many optimizations: (see also the test report in the ST Computer / ATARIinside 2/98)

o approximately 15-20 times the speed of an ATARI ST
o approximately 10 times the speed of a Falcon
o approximately 6 time the speed of a TT

These values can be further improved by the use of a modern VGA Graphics card. For example, the screen display can be increased to up to 40 times that of the Falcon.

Availability:

First manufactured units will be available starting the middle of March.

The World Premiere of Milan will be at the Music Fair in Frankfurt (hall 9, stand 22) and at the Atari Show '98, the 4th and 5th of April, at the Neuss town hall (Neuss is near Dusseldorf).

The Milan will ship in meaningful quantity by the middle of April.

<flash> We'll receive them immediately thereafter <flash>

Price:

Milan Standard (8 MB Ram, standard mini-tower, keyboard, mouse, 2 MB S3-Trio V64 Graphic Card, 435 MB Hard Drive, High Density floppy, file system and software) 1499 DM

Milan Design (same as standard plus the original Milan tower case) 1579 DM

Add a CD-ROM (4 times speed) TBA

Add 16, 32, 64 or 128 MB of RAM TBA

Add a SCSI port TBA

Other configurations TBA

Add the "trust" issue to that. I've been working with Win95
for almost a year now (Win 3.11 for three years before that),
and I never really know what the OS is doing!! The file selector
"hides" the extenders, and the "save" function usually changes
the extender even though I've previously done as "save as..."
with the correct extender. And that's just the minor stuff!

I do my critical work on my Falcon. Then I debug it on the
Win95 system before turning it in. Win95 is too unstable to
be trusted.

Tim, I feel the same way as you. I really think it depends on what you know - if the only computer you have ever used is a PC and Windows, you really would have no way of knowing what you have missed :). Comparing my TT to the PC's and Power Macs at work is somewhat akin to comparing my latest company car (a 98 Tarus wagon) with my personal car (a 73 Citroen SM). The SM was way ahead of its time - and still is in many areas, just like the TT - but the Tarus is new and has the advantage of the latest in technology. Is the Tarus a better car than the SM, not on your life. Given the choice of which one to drive on a daily basis I would choose the SM, but I can't argue with the cost of the Tarus :). The same is true for the computers. For most things the TT feels as fast or faster than anything I have at work. For graphic intensive applications it does show its age, but I still enjoy using it and do a lot of work related things on it. TOS (in my case MagiC/Geneva) is a lot more friendly than Windows 95, much easier to set up/change and, and in my experience a lot more stable. We just installed Mac OS 8.01 at work and I have to say I am not real impressed.

Are you a professional recording engineer or do you like to dabble with recording? Do you use the Cubase package for the Atari ST, or have ever wondered about what is considered one of the best sequencers for MIDI instruments on the market today? Then have we got a meeting for YOU!

On Wednsday, April 15th, the Toronto Atari Federation will be putting on a very special presentation with Ray Williams of Steinberg Canada and Club Cubase! Featured at this meeting will be a demonstration of Cubase Audio 16, the 16-track hard disk recording/sequencer package for the Atari and C-LAB Falcons that puts together a comprehensive recording studio solution in your own home. Ray will also be giving tips and tricks that will help users of Cubase get the most out of their sequencing and arranging, and should also have product for sale as well.

We're honoured that Ray has volunteered his time for this presentation, and we know that this will be a VERY informative meeting for all MIDI and recording enthusiasts. This meeting is definitely not to be missed!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

I've been using ESScode 6.4 for a while to process MIMIE files, but it has two bad problems-it messes up the file names, so it always wants to overwrite the source files(or something), and if an error occurs, I have to pull tricks to get to the file menu and select "quit". I'm hoping for fixes this, or some better program.

Actally, you can get the printer codes. They have a Faxback
system, where you can get the pages sent to you, and a web site
(www.cannon.com, I think), where some of this stuff is located.
I got my codes info for my BJC4100 by using the faxback.
1800-423-2366(USA). If this won't work for you, let me know.

Tim, in most cases. NO. Most programs have not had updates in many years,
before most modern printers were even a twinkle. I just
purchased a Cannon BJC-4100. There are no drivers for it.
Writing drivers can be a nightmare. However, the Cannon does
have a efault emulation-an Epson LQ2550C. And this driver
for Pagestream does work. Not perfectly since it was written for
a dot matrix, fanfold paper, printer, but it works. I'm
looking for a GDOS driver now. As for all of the other ST
software that doesn't support a Cannon mode, I'll use my HP
Deskjet. Since I hae a cartridge for it, I can use it for
everything else, in B/W, in Epson FX80 mode. To do color
requires converting to something I can use the cannon on, or
learning to write printer drivers.

>purchased NVDI 4 and I am using the hp dj 660 printer driver.

Having researched printer driver problems on the ST for sometime,
(most programs don't even list HP printers, they are so old), I
decided two things-1)make sure the printer emulated something
popular at the turn of the '90s(epson), or make sure the program
had a builtin printer driver creator. My Cannon BJC34100
(thats BJC-4100) emulates an Epson LQ2550C as a default. And
for my HP, I bought the FX80 cart soon after. Thats compatible
with everything, in B/W only. I printer most of my pictures
with Pagestream(at least it does THAT right in color). I also
have a program that prints Spectrum pics(no blending), and
another that is supposed to do screen dumps. I'm still looking
for a GDOS driver. I know that most of the programs will never
be upgraded to properly support color where applicable.

Let me know if you can download it OK.

I've changed the readme.1st that I added to the archive since I first uploaded it because it turns out that it _is_ compatible with Freedom!, for some reason SMUSetup got confused not by the FS but by the excessive tabbing that I had in my original start.set. Doesn't take long to whip through and reconfigure tho'.

Re: "Toad computers", kws@Radix.Net scribbled the following on 24 Mar 98 @ 00:41:56:

k> Granted, since I live 45 miles from them, and drive there now, I have
k> no problems getting things, if I can find them there. But when I did
k> do mail order, well, lets just say I still had to drive up there to get
k> all of my order!
k>
k> What did you order?

The first time (since their support dropped drastically), I ordered Imagecopy 4. I was told it was in stock and would ship that week. I got it about 6-8 weeks later, only after complaining several times.

The second time (and the last time I'll ever order from them), I ordered HD Driver. The only reason I ordered from them that time was because my favorite company, Systems For Tomorrow, was out of stock, and I was anxious to get it. Again they told me it was in stock and would ship that week. And again, I had to make several complaints before getting it about a month and a half later. (It would have been much faster to wait for Systems For Tomorrow to get it in stock.)

Needless to say, Toad is the last company I'd recommend. And what's sad is they used to be the company I almost always ordered Atari hardware and software from. I spent a lot of money there over the years, but obviously that means nothing to them now.

Well, I am not an US Atarian, but I agree. I prefer my TT above the Pentium-200 I use on my work. But to be fair there are things that are better on a PC. I work at home with 16 colours. This is most times enough, but sometimes it would be nice to have more. And I have a higher resolution on my work. But I am thinking about buying a grafical card, so this difference will be dissolved. Also the PC is faster. But the GUI that I have with Magic I do prefer above the GUI of Windows. The bottomline is: if I could get a good PC by trading in my TT. I would not do it. (Maybe if I had two, I would trade one.) On the most points my TT is just a lot better then a Windows 95 PC.
Cheers,

Cecil.

Well, Canon doesn't have a Faxback here.

>and a web site
>(www.cannon.com, I think), where some of this stuff is located.

I tried all Canon Web sites (Canon Benelux, Canon Germany, Canon
Switzerland, Canon Europe), but none of them carries any programming
information.

>I got my codes info for my BJC4100 by using the faxback.
>1800-423-2366(USA). If this won't work for you, let me know.

Thanks. I already got most codes, but there are a few missing. I'm not
able to access the different character sets in BJ emulation mode.
Maybe you would have the proper escape sequences for that.

If you repartition your drive with HDDRUTIL (coming with HDDRIVER) the
sector size set by Diamond Edge doesn't matter. Note that the current
version of HDDRIVER is 7.1 (7.5 will be available soon).

Hey! news@whalley.demon.co.uk (John Whalley) wasn't it Tue, 24 Mar
1998 00:45:46 GMT (GMT DST) that you wrote:

>connected, though. Someone (Tony Greenwood?) said they were working on
>a starter pack for people with just 1 meg and a floppy a while ago.

Not me...although I do recall seeing that someone did say that..in a
thread I was posting to :)

I have always advocated that a One meg ATARI fm is all you need to get
on the Internet..NO hard drive NO ram disk, NO drive B...just a one
meg atari and you can surf the net, email, news, ftp, irc the lot..

You can't do "all" the above with the latest software.. but as I did
all the above with my 1meg fm a bout 3 yrs or more ago.. then the
facts are it can be done.. just use old software:)

However before everyone shouts...I agree the optimum way is to use a
HD etc... but if all someone has is a one meg ATARI then they can
still do it..:)

Just look for the early CAB/STiK releases..its all there.. try
http://wuarchive.wustl.edu/systems/atari/umich.edu/Network/Stik/www116.zip

(NOTE: at the time the above was released.. you registered for cab ovl
and stik.. cab itself was free.. but the stuff you needed wasnt.. i
registered mine with danny at cyberstrider... I doubt this is still
the case as the original stik author isnt about)

I believe the above zip (if still there) will get you stik and CAB
that works on a bare bog standard one meg ATARI, then you just get the
other apps like FRACIRC and Newsie etc that also work on one megs and
away ya go :)

The main difference I think is CAB and its cache system.. easy to
configure to a single floppy..hey its what I used and I had just about
NO problems surfing and irc etc..on my original 1meg fm and a mouse...
nuffink more:))

If you have more memory or a hard drive then keep away and get the
latest..but minimumu systems get the above:)

Well. The main problem was to get a connection or to have access to the
net to have the ability to ask.

> now, true, but your original point was that using the net only became
> possible in the last couple of years.

Well, what I really meant (I think this is clear now) that most of the
ATARIans werenï¿½t able to connect to the Net because the software was too
complicated, their providers only supported PPP or their hardware wasnï¿½t
appropriate (no harddisk).

> Actually a lot of progress had been made quite early on.

I agree. Access to the Net became a lot more user-friendly since the
early days.

> Such as devoting a whole partition to a minix filesystem just for web
> browsing :-)

Oh, I am using Minix for a couple of years now. That wasnï¿½t a huge
problem for me. ;-)

> I was just reinforcing my point that web browsing (with limitations)
> was available at the time. This MiNT/X/MiNTnet installation was the

> lynx which had been around for a while by then.

BTW, I tried to install MinTNet a few years ago but didnï¿½t succeed in it
so I stayed with access via the German MausNet. :-)

Unfortunately due to a lot of spam I stopped writing to
comp.sys.atari.st from my MausNet account but because it is nice here I
will start it again from the beginning of April. =8-)

That would be a nice idea because one of the reasons I am still an ATARI user was that I bought a 2400 baud-modem ages ago and got in contact with a lot of other die-hard ATARIans since then. :-)
I believe that several ATARIans have no idea what they can do with their machines (like installing a graphics card or a PAK accelerator).

> The adverts are rather good, but in my case I'm happy with Demon

Hi to all.

Can somebody point me to any good vt100 emulator for Atari ST ?
I am using Atari ST as a console to my Linux box.
I tried vt100emu.30C, but it doesn't work properly with some
programs like ircII that split the screen - scroll doesn't work.

Another problem is that I'd like to install any cyrillic font,
preferably koi8, in order to read russian texts via this terminal.

Anybody can help ?

10x in advance.

Yep you are correct - CAB was free, however Joe Connor was taking
contributions/registrations on behalf of Alexander Clauss.. I was in
touch with both the authors of STiK and CAB.OVL and was taking
registrations on their behalf.

CAB.OVL and STiK development moved to Dan Ackerman around March 1996,
and I was moving jobs, city etc and could no longer devote the time I
had until then on dealing with support emails/phone calls... so
registrations for these then moved to Joe Connor.. and as far as I am
aware, he still collects registrations for them on behalf of Dan
Ackerman.

I am still the support site for Dan's Antmail program though...

ATARI ST GAMES FOR SALE.

The following games are looking for a good home in the U.K., can you help?.

TITLES:

DRAGONS LAIR.
DOG FIGHT.
F-19 STEALTH FIGHTER.
LEISURE SUIT LARRY 2.
FRONTIER (ELITE 2).
CORPORATION.
BATTLE COMMAND.
M1 TANK PLATOON.
12 GAME PACK including CHASE HQ 2, FOFT, SPEEDBALL 2 and the Star Wars Trilogy.

For a complete list including prices, descriptions and idiosyncrasies for the games e-mail me at...
sgm23@eng.cam.ac.uk

NOTE: items not sold by 15/6/1998 will be thrown out with the rubbish.

P.S.
Thanks to all those who have replied to my Help, VCS on ST posting.

>
> If Guido is around, will this be fixed?

In 256-color-modi there are *always* problems with palette switches.
There is no perfect solution, and different people prefer different
compromises, after my experiences.
The behaviour of 1stGuide is what I consider 'reasonable' and consistent
under these circumstances. Your mileage may vary.

I have made special provision for optimal High-/True-Color support in
1stGuide, which I consider more important if you are concerned about
image display quality.

Ah yes, couldn't agree more! I don't know what it is but it could be the straightforward simplicity and the keenly economic design of the Atari s/w which wins. The PC wears its history like a shroud but the ST still appears lively despite its equally long life.

Originally there were 5 or 6 discs that came with the Falcon:
Language disk, AHDI, a few sound tools (very nice, you should copy it from
any other Falcon owner; you have the right to do so, it's not illegal).
Even 2 disks with samples were included.

> If tha manual is anything like the STE's one, then I'm not losing much,
> but after opening up the beast, I would like to know what the various
> components and sockets are. There are connectors and jumpers all over the
> place. It's a TOS 4.04, is this the latest ?

It is.
Most of the connectors inside are for exoansion cards like CPU speeders
and graphic expanders, also for Fast RAM.

> Is there anything else really necessary I should download. I realize I
> should get NVDI or MagiC, but the main financial priority is going to get
> the buffer/clock fixes done for digital audio and probably and external
> SCSI drive.

Concentrate on MagiC/NVDI... ;-)
Remeber that the Falcon's SCSI bus is not as reliable and fast as that in
the TTs... (Falcon SCSI about 1.6MB/s, naerly like ACSI on the ST)

Hope to have helped,
Carsten

P.S.: I hope you are not angry that I adapted your Fuji Logo a few weeks
ago?

On Fri, 20 Mar 1998, Paul Bocchino wrote:

> Does anyone know of or have a video cable to connect a Mega2 ST to a
> standard VGA monitor.

Standard reply:

Adapter cable ST <-> VGA:

Need: 2 plugs (should be evidential), Pin layouts in the manuals (of
the ST and any VGA monitor); Wires

Connect HSync and VSync correspondingly
Ground either
Monochrome out to Red, Green and Blue
Monochrome detect to Ground
Sound to any audio plug to connect active boxes or so

It is not possible to display low/med resolution on an ordinary VGA
monitor, just ST high.

Greetings,
Carsten

5952. Problems with DIALER of STInG: "Serial driver not installed!"

Newsgroup: comp.sys.atari.st
Date: 1998-03-24 00:00:00 UTC
From: a187340@hotmail.com
Message-ID: <6f8kjf$l4f$1@orthanc.reference.com>
Source record: 104721
Cross-posted to: de.comp.sys.st,comp.sys.atari.st

Hi folks,

I tried to set up the STInG-package for PPP protocol.
So far everything looks good (sting loads the modules
centronics, serial, tcp/ip ... etc)
but when I try to start the DIALER, there is a message:
Serial driver not installed!

(I guess this is a follow-up but CAB1.41 with overlay
returns error -17 when trying to reach internet).

Simultaneously the GEM-ping from Tools\ works with 127.0.0.1 ..
The modem connection is also ok.

After trying for 3 hours different parameters,
I have no clue what else I could change -> please help!

Ok, last not least: I use Mega 2 w/TOS 1.2 or 1.4(?).

(please respond directly to a187340@hotmail.com)

Many thanks,
Artur

Yes, there is a standard '.<crlf> that appears at the end of a news
transmission. This is specifically handled, and should not be any
kind of a problem.

THE BALDKITTY REPORT #1

SuperSnoop's associate, BaldKitty, submits..

Report for 3/12/98. . .

THE PRESS HAS PART OF THE STORY...

Although there is much speculation in the press about the motives of
Hasbro in going after Atari, all of them (thus far) are not accurate.
Much has been made over the retro market. And, in all honesty, the
market does look good. However, to simply expect Hasbro to only remake
the retro-atari titles for the likes of the PSX and PC is quite
laughable.

There is a console out there. There are 2 consoles out there. I'm
quite sure you all have 1 in particular, in mind. Well, fear not,
Atarians...Why not ask VM Labs about Hasbro. I think the 2 companies
know each other well. Secondly, there is a in house job that also
looks very impressive. Spec sheet includes: 8 MB Ram 8 MB Rom 1.0 GB
HD 4 MB Video RAM 3 D Hardware Motorola CPU Programming to make the
PSX look more like a Ph.D. The system easily outpaces the PSX and the
N64. Internal documents don't show the same for X (meaning, X is more
powerful than the in house cat.) Which of these will see the light? If
the mags are right, neither...if I am right, 1 of them most definitely
will. I'm willing to bet on which one, as well.

ATARI IS LITTLE MORE THAN PAPER.

"Atari" as a company no longer exists. Any products you see with the
Atari name will only be of the Atari name.

$5 MILLION COST SEEN AS "A STEAL"

Company officials with Hasbro still find it hard to believe they got
Atari lock, stock and barrel for the price they did. SEC Investigators
do as well. Who's to blame...well, we'll just have to see on the
ultimate scapegoat, won't we.

I am the baldkitty...

END TRANSMISSION
```

c> JPEG's ;(---

AFAIK, Imagecopy doesn't yet support progressive JPEGs, with or without using
JPEGD. However, you can convert them to non-progressive JPEGs without any
loss in quality, using Tommy Andersen's JPEGTRAN.TTP program. Here's his web
site:

THE BALDKITTY REPORT #2

ACCURACY OF THE BALDKITTY

The bald gato does not know all, but does know much. Even now, as most are still in shock about the recent events, more is on the horizon. The furless one always intends to make sure Atari faithful know first. And know accurately.

PAPER TIGERS (HEHEHEHE)

Everyone knows that Game.Com is a tremendous failure. Expect it to make a graceful and quick disappearance thanks to KB Toys and other such discounters. Hasbro will be releasing a portable color system, mainly to compete with GameBoy. Which would you rather have? Backwards compatibility with the Lynx, or Game.COM? As of right now...the Lynx looks to be the frontrunner.

WEASELS AND SKUNKS AND LAWYERS

The bald one's sources tell him that at one point in time, Hasbro was willing to fork over substantially more cash for Atari. However, the dire situation of JTS demanded an immediate influx of new operating capital. Just how much is substantial? Try 10-25 times more than the final closing price.

BS, AND I AINT DISHIN' IT

The sale of Atari will not affect in any way the release of Battle Sphere.

VM LABS...OH, HOW ARE YOU

While the bald one cuddles up with a blanket by the fire, word has it that VM LABS and Hasbro also very "cuddly." Case in point...Hasbro Interactive is in possession of a software development kit. Case in point 2...Hasbro is also a potential licensee for hardware.

MICROSOFT SPURNED?

The original plans for any Hasbro home system included a possible Windows CE interface. Thankfully, only Sega will be tapping Microsloth for its Katana system. Word also has it that Sega is ready

to repeat the mistake of the Saturn...namely, sending the Katana out the door with an unbelievable list price, and unfinished development tools. Not to mention a buggy OS.

PROJECT X...GET YOUR PROJECT X

The hairless mess understands that Hasbro did approach Atari with designs on snagging the Jaguar II. However, it was decided that backward compatibility was less than desirable. MORE TO COME, ONLY FROM THE BALDKITTY.

BACKWARDS COMPATIBILITY AND MONKEYSHINES

Project X is not, never has been, never will be backwards compatible with the Jaguar. Is Project X being licensed by Hasbro? Baldkitty's sources say yes. Will the Hasbro X system be labeled Hasbro? Baldkitty's sources say no. Will it be labeled Atari? Baldkitty knows the answer.

ATARI SANS JTS

What will be the main effect for end users? #1, Atari is expected to return to some form of name recognition.

ATARISOFT REDUX?

There has been much speculation that the only reason for the acquisition of Atari is to release classic Atari games for next gen systems, much like Atari released its licensed games for the Apple][, the C64, TI 99/4A and PC during the early 1980s...

The speculation is incorrect.

However, don't be suprised to see updates for classic games.

SEC INVESTIGATION IS UNDERWAY

Baldkitty's sources indicate a three pronged investigation featuring representatives of Treasury (IRS), Justice (FBI and Attorney Generals office), and, of course, the SEC.

Wanna guess at the outcome?

At this point, its too early to say. However, don't be suprised if plea bargains aren't made in the near future. Could one of the Tramiels be in hot water? Could be, says the Kitty.

... Type +++ ATH0 to continue...

It just occurred to me ...

If any of you who have this problem happen to be running MagiC as well
then here's an idea:

Launch a command shell into vt52.prg, run cab then periodically keep
executing memexamn.ttp while the memory is being gobbled up
(redirecting the memexamn output to a file of course).

memexamn outputs details for every single block of memory, be it
allocated or free so there's a reasonable chance it might provide
worthwhile information.

Oh dear! I don't understand this now. As far as I can see it should only put up the file selector if the box is unchecked if it can find NO .SET file i.e no set file in the HOME or current path.

>>Ummm ... I don't think that SMU understands multiple masks separated
>>by commas!
>
>Huh??? This works just fine -just try it!
>Where have you heard that using multiple filemasks separated by commas is
>"illegal"? I actually tried it with a space instead of a comma, but that
>didn't work.

It's just that neither the documentation or the START.SET example imply that you can do it. I tried it myself using a hand-carved START.SET. If I put *.prg,*.inf I got an empty window. If I put *.prg, *.inf (note the space!) I just got the .INF files. I downloaded the latest, v7.02, from Thomas' page today just in case it was a recent facility but could not get it to work. Grrrrr...

>It's just that for some reason (a bug?) SMU-setup removes it the second
>time you edit the setup file.

OK. I had assumed that SETUP was just imposing a START limitation (i.e. one mask only). I guess I must be wrong but I wish I could prove it.

>But "Start" has no problem understanding it.

Humphhhh ... mine does :-)

>File-masks are multiple filetypes are really useful if you just want to
>display certain files from a folder.

Yes, yes. I'd LOVE to be able to do it. What am I doing wrong, Hallvard?

>text editor before, after and while SMU-setup had it loaded. No change,
>but when opening up the "links" (i.e. double clicking them in SMU-setup)
>the setup was changed somehow as I described above.
>But I could quit without SMU-setup asking me if I wanted to save the setup.

Yes. It looks as though multiple masks are removed when SETUP reads in
the START.SET file.

>There's usually a solution to everything :-)

Yup! I wish I could get my START to do multiple masks - still trying!!

As far as I am aware, that's the case. I don't see any problem here.
BTW, in 16-color-mode, I don't change any color at all. I noticed
all kind of annoying problems with other programs in this case.

> and change the other 240 colors as needed?

I change 216 colors as needed, starting with 'index' 32 (note
however that there are different kinds of indexing to use!).

This approach has turned out to be rather common (consider the
[in]famous "Web-palette", as used by Netscape, and I chose the
same before knowing about Netscape), and I still consider it
the most consistent solution in this mode.

Guido

Nope, just lucky there was a lot of help around at the time. The point I was making was simply that it was entirely possible to get on the net from quite an early stage (with PPP, too). We have nicer software now, true, but your original point was that using the net only became possible in the last couple of years. Actually a lot of progress had been made quite early on.

[TAF/Chimera package]
>:-)
>It seems to me, that I must have really missed a lot.

Such as devoting a whole partition to a minix filesystem just for web browsing :-)

I was just reinforcing my point that web browsing (with limitations) was available at the time. This MiNT/X/MiNTnet installation was the first many of us saw of the web, though there was already a port of lynx which had been around for a while by then.

>were wrong, werenï¿½t they?

Hardly. We could do with getting some of the more isolated Atarians connected, though. Someone (Tony Greenwood?) said they were working on a starter pack for people with just 1 meg and a floppy a while ago. That would really make it easy for a lot of people who haven't got upgraded machines to get connected, if it can be done.

The adverts are rather good, but in my case I'm happy with Demon (despite the odd service hiccup).

Cheers,
John

Hello Fellow Atarians:

We recently got a Pentium with Win95, soundblaster gold, 56k
modem.Got it configured for internet(aaaghh!).Got some games,
microsoft office, cakewalk, ect ect..But I find myself going back to
my Atari's even for Internet, just becuase it is so different(and
way cooler) then the Win95 stuff.

Right now I have two atari systems..a TT030 w/ geneva/neodesk.
a 40M Internal and a 760 M external. Lots of Midi software..Cubase,
Dr T Omega II, Music Mouse, "M", Smpte Track, EditTrack<ect ect.
Also Pagestream, A beta version of Works II, and more. And a Mega
STe system that I network with the TT.

After working all day (at work) on Win95 stuff, I find it a RELIEF
to come home to my Atari's! I was wondering if this attitude was
prevailiant amoung Us Atarian's?..Comments?...

|programs like ircII that split the screen - scroll doesn't work.
| . . .

I use Uniterm daily at work to talk to various laboratory computers over the local net. It works well _apart_ from annoying problems with the mouse buttons. Ideally it should wait for button_up before checking for button_down but it doesn't. Therefore unless a button press is very short it thinks I have reclicked the button.

I use Stalker at home to dial up various services but have used it less since connecting to the internet. I don't use it at work because it doesn't handle line drawing correctly (Uniterm does).

I have no idea whether they would work with a split screen or not.

NVDI (my version is 4.11r5 or r6, IIRC) has a driver for the LQ2550
which seems to include colour support. This is for GDOS output.

Dave,
I admit, most of my EZ 135 disks are only 32MB per partition (4+/disk).
However, I have done 1 128Mb and 1 5 Mb (a few Mb seemed to leave for some
unknown reason) using ICD software, and this worked fine. Diamond Edge has
been rumored to have a few eccentricities and I know nothing about HDDriver,
but as for the hardware -- you've no problem there.

One other thing -- have you moved anything lately? Bad cabling can be
nightmarish.

Tim,
I work daily on Win 95, Win 3.11, and System 8. Until I got System 8, I preferred Geneva over everything. On my nice new 225 Mhz 603, I'm about tied. I don't own any non-Atari computers partally due to the fact that I enjoy the hobby side of computing -- a smile comes to my face when I note that my 16 Mhz 030 Falcon beat my 33 Mhz 040 Mac at a task (something that happened fairly often).

To clarify, the multiple clients I spoke of weren't connected at the same time. It's just that they were resident while multitasking and had been used. I jump to and from resident clients, but two or more were never actually connected at the same time. If I didn't use NEWSie during such a session, the disk corruption never occurs.

KA9Q has the online components completely integrated, it has smtp, pop3,
ftp, nntp, ping, traceroutes the lot all built in, only HTTP is missing
that I can think of.

> It only took me approx. 15 minutes to get online.

It worked fine for me but possibly only because it was already
configured for my ISP.

Sorry to hear about the problems with NEWSie. My question is: Did you start using a new version of NEWSie this weekend? If not, could it be possible that your ISP changed something over the weekend?

I had a traumatic experience several months ago, then I could not retrieve any news articles. I found out that my MTU definition in STiK was too large after my ISP had reconfigured their network. So I changed the MTU from 1500 down to 1006, and everything worked again.

This could be the case for you as well.

What FTP problems?
John

>after this action. The newsie prefs.inf file only talks about the
>newsgroup_font and overview_font. Anyone any suggestions? Note:
>config below ;-)
>
This could be related to the display of the article font selector that
can extend down past the bottom of the screen. If you do not have
"offscreen bitmap" handlers in NVDI 2, that could explain it.

The article font is actually labeled "news_font" in the prefs.inf
file, and you could edit this file directly with you selected font
name, then start NEWSie. Be careful that you type the font name
correctly, and make certain the <tab> key separates the '=' and the
font name.

g> memexamn outputs details for every single block of memory, be it
g> allocated or free so there's a reasonable chance it might provide
g> worthwhile information.

I haven't did a real good test yet, but my preliminary investigation into why I'm losing memory with CAB seems to be the way CAB handles memory for its graphics cache. The longer you run it, and the more graphics it purges from memory to make room, the more fragmented memory becomes.

So eventually, while you might have 4-6 megs free, your largest block is only about 1 meg. And only a little bit of the rest of that 4-6 megs is actually being used by CAB's cache. The rest is just sitting there unused in small blocks.

It seems to me that CAB should grab the memory you set aside for the CACHE right from the get-go, and keep control of that block of memory, so that it never gets fragmented. But I'm no programmer, and maybe that's not feasible

Do you remember the Match-it game ?
It was in a demo (I can't remeber wich one) but I'm sure YOU know!

Well, since I would port this game to PC, I'm looking for a screenshot of the game (with
all tagets,of course - I don't know if this if possible since it comes from a demo, but never knows)
The other point is the music : has it ever been converted to .MOD, If yes, please tell me where
I could get it.

thanx,
aga.

Don't enter or save anything for ports on which you use the Dialer. The
Dialer does it all automagically. Especially, don't set the port to
"Active" in the CPX.

From: ScholzPeter@t-online.de
Message-ID: <6f9bsnijh1@news01.btx.dtag.de>
Source record: 104870

Hallo.

Habe folgendes Problem:

Wenn ich den Atari (1040 ST) einschalte (egal ob mit oder ohne Disk)
passiert folgendes:

- Rechner greift rhytmisch aufs Diskettenlaufwerk zu (Lampe am Laufwerk
und gelbe Lampe oben rechts (unter Atari-Schriftzug) blinkt rhytmisch))

- der Bildschirm zuckt einmal kurz auf und bleibt dann weiï¿½

- ab und zu zuckt dann der Bildschirm wieder auf und links unten sieht man
sehr kurz 3 Bomben

- nach einer ganzen Weile bleibt der Bildschirm mit den 3 Bomben stehen und
es passiert nichts mehr.

Ich kenne mich mit dem Atari leider nicht aus, habe aber schon versucht die
gesockelten ICï¿½s nachzudrï¿½cken (war ein Tip von einem anderen Atarianer).

Hat aber nichts gebracht.

Hat jemand eine Ahnung was das sein kï¿½nnte, oder was mann da machen kann ?
Gibt es Ersatzteiele fï¿½r den Atari oder gibt es noch jemanden der Ihn
repariert (oder seinen alten billig abgiebt) ?

Fï¿½r eine Antwort wï¿½re ich sehr dankbar. (an Scholz71@AOL.COM)

Tschï¿½ï¿½

Peter

CoNnect is a good choice. If you want a TCP/IP connection to your linux
machine, you should try Boris Cahans TelVT102. I cannot really recommend
TelStar at this point as it's VT100 can't deal with split screens yet.

Source record: 104641

Re: "Newswatch", rosco@game-master.com scribbled the following on 25 Mar 98 @ 20:57:18:

TM>> My guess is that your news provider does not support the NEWNEWS command
r>
r> AHHHH...That makes sense. The coin has dropped. It doesn't mention
r> this little requirement anywhere in the docs.

Not to speak for Gary, but I think at the time he wrote the docs he thought pretty much all news servers supported the NEWNEWS command. He was nice enough to implement retrieval by article number (in large part due to my request), but as I said, AFAIK, it hasn't been released publically yet. He may let you have a copy, though. Gary is very good people.

r> Here is the log file:
r>
r> 200 Typhoon NewsServer -- http://www.highwind.com/ (Typhoon v1.0.11)
r> NEWGROUPS 980325 042516 GMT
r> 231 New NewsGroups Follow

That appears to be incomplete. It should show the attempt to use NEWNEWS and then the response from your server. Here's what mine shows:

```
200 Supernews NNRP server ready - http://www.Supernews.com
NEWGROUPS 980326 024358 GMT
231 New newsgroups follow.
<period>
NEWNEWS comp.sys.atari.st 981208 000000 GMT
502 NEWNEWS command disabled by administrator
QUIT
205
```

There was a period where there is now <period>. I took it out because a period on a line by itself can signify the end of a message to your provider. Perhaps that's what happened with the rest of your log.

r> You mean to say you're losing memory in CAB even without NOVA VDI? This
r> would correspond to what Terry also stated, although he thought the type
r> of GIF had nothing to do with his problem under MagiC. I'm confused <g>.

My problem is all but confirmed to be memory fragmentation caused by CAB's management of its graphics cache. I have CAB set up for a 6 meg graphics cache, and have it leave at least 1 meg free. When I first load CAB I have about 8 megs free, more than enough for both those requirements. After surfing for several hours, my used graphics cache gets smaller, but so does available memory. By the time I'm done, I might have no more than the 1 meg free I told CAB to leave alone, but yet, only 1-2 megs taken up by the graphics cache. The rest, as shown by MemWatch, is a fragmented mess. Lots of free memory, but in such small blocks, not much use. Quitting CAB (and PPP-Connect, if used) frees up all that fragmented memory.

Re: "CAB in Falcon high-color", guivol@esc.de scribbled the following on 25 Mar 98 @ 23:30:22:

g> I can't tell what CAB does, but I would like to point out that for decent
g> image display in high-color you must apply dithering as well!

Is that because it's going from 24-bit to 16-bit? That makes sense. Still, you're working with more colors and without the restrictions of a palette, so I would think it would be at least a little faster, and certainly not slower.

I'm not sure exactly what's happening when CAB says "Loading..." and "Converting...", but it appears that where high-color is falling behind 256-color mode is during the "Loading..." process. If that's simply the decompression process, then it would lend itself to the slowed-CPU theory

g> On the Falcon, I would expect image loading in high-color to be faster
g> than in 256-colors even with FS-Dithering in both cases, due to the
g> noticeably less efficient screen management in 256-colors.

That would make sense, which also lends itself to my theory that high-color slows down the CPU. I haven't actually tested that theory, though (my copy of Gem Bench crashes under MagiC, and I'm having problems with TOS).

g> This depends on the software design, of course, and I didn't perform
g> exact timings. But I guess it is true for 1stGuide.

I only did a couple timings this time, but have done timings before, so I know they are not aberrations. I loaded two fairly large JPEGs into CAB under both 256-colors and high-color, but aside from that everything the same. In 256-color mode they loaded in 1:42 and 1:50. In high-color mode they loaded in 2:00 and 2:10, respectively.

Have the hard drive program on a floppy, boot the machine without
the hard drive turned on. After your at desktop, power up the hard drive,
then run the program from the floppy and then access the hard drive.
When you see the auto folder on the drive, go in and delete or change
the other programs so they will not run. Then reboot.

Hi All,

since I put the file INSIGNIA.ZIP on the homepage of a friend, I've heard
nothing from the others, except Derryck telling me he would go and pick it up.
Now I've come across this msg where someone tells he couldn't find it (???).

For what I know, this file is still at the same place,
http://www.bbst.demon.nl/louis
and I had another contact with the guy one day after we'd put it there and he
told me then at least one visitor had picked up the file then. That was about
10 days ago.

Anyone who picked up this file and got the SoftPC FSA drive working with it?

Does anyone know where it is possible to service an Atari 1040ST? I
have an Atari that tends to shut off for some strange reason and regular
PC dealers won't have anything to do with them. Although I use an IBM
now, I would still like to use it for the music software I have for it.
Any leads would be greatly appreciated.

Have a look at the Quick FAQ, you'll find info on how to make one
yourself in a file calles falcadap.zip. The cable in there is mainly
designed for use with a Multisync screen with an RGB switch, but without
the switch it works fine with any VGA monitor.

Good luck

Nick

>

Actually 1040 or 520 refers to the original 1Mb memory size, which can vary with memory upgrades. We usually refer to the machines as an ST, and STF (same but with internal _F_loppy), and STFM (Internal Floppy and RF _M_odulator), STE (_E_nhanced - with many technical improvements). Then you have the MegaST (ST with a pizza-box case), and the MegaSTE (Very _E_nhanced MegaST). Then you have the Falcon which has an 030 processor, VGA display, DSP, etc... a whole new machine altogether, but still mostly compatible with the older ones.

Serious audio work is out of question with a 1040ST as it has no audio inputs at all, and no specific audio outputs (except STE versions). D2D applications, and audio with MIDI require more power that an ST can handle.

The Falcon is A LOT more powerful, it has mic in and speaker out, although they need to be modified to Line level for serious work. This has to be done by a CMS qualified technician.

As far as MIDI only goes, you won't see any difference between a Falcon and an ST, except maybe more comfort with the Falcon display. However, if you plan to do digital Audio, you need a Falcon.

Also, make sure you know what software you want. Notator, Cubase and Logic are the mainstream MIDI sequencers. If you want to sync MIDI and audio, go for Cubase Audio. These programs are all 2nd hand stuff, pretty difficult to find, and pretty expensive. They are dongle protected too.

Maybe it would be nice if someone put up these on an FTP somewhere. I don't see how this could be an issue, as the software is probably in a similar copyright status as Xcontrol, which is available all over the place.

From: dipching@ping.be
Message-ID: <35191e1a14798c1@ping.be>
Source record: 104800

To any graphic card user/owner, and especially those using
Mega ST
Mega STE
TT030
Medusa
Hades
Milan
equiped with Nova, Spektrum, Matrix, Crazy Dots and other ET4000
and 6000 cards .....

****

Too often, we must verify that games programers are ignorant of
graphic card users
... WHAT A PITY !!!

Here follow some true situations:
- a game only runs on a Falcon because the program detects the
computer kind at the beginning and so makes it impossible to run on
another computer.
- a game is not VDI programed (the best exemple is the french
magazine STraTOS interface though it's not a game).
- a game uses the Falcon DSP and so refuses to run if it don't detect
anyone.
- a developper simply avoid other computers from its programming
langage.

... WHAT A PITY !!!

Following this statement more and more up-to-date ... I have created
a new web page which index some of the best full GEM games which run
without any problems on any graphic card .... whathever the card is
(Hades owners please verify ...)

Most of these games are directly downloadable from this page
try them and carry them !

http://ping4.ping.be/dipching-drulkhor/VGA-GAME.HTM

This page is also accessable from my atari page:

http://ping4.ping.be/dipching-drulkhor/ATARI.HTM

Have fun

Are you talking about when you decode mime files? If so, that can be fixed
rather easily by removing the LF from the display message with a binary
editor.

It would help if you'd turn on logging and show what your log says.

My guess is that your news provider does not support the NEWNEWS command, and requires you pick up articles by article number. There is a new version of NEWSwatch in beta testing (at least I don't think it's been released yet) which does just that. Contact gary@the-gap.demon.co.uk for availability.

I don't know if anyone can help. I have an Atari TT which I would like to use with Cubase. Unfortunately, some time ago, I deleted the hard drive from the OS and I can't get it back. I am literate with PC hard drive installation etc.., but this is really weird.

If you are going to reply, 'spamnot' should be removed from my E-mail address.

Thanks

John

Hi Lou

If your hard drive is self booting, you may try pressing the ALTERNATE
or shift key.

Failing that, do you have the disk that came with the disk drive and
that contains the drivers to boot from floppy. If so, boot up your
system with the hard drive turned off; when you have got to the usual
Desktop feature, switch the drive on and wait until it's finished
coming up to speed and run the driver program from the desktop.

A possible reason for the resetting loop, could be a program clash in
the AUTO folder. Anyway this should give you access to the hard drive,
what you do after that depends on what you want to do.

If I can be of any further help, please let me know:)

Cheers! for now
Steve

Source record: 104813

Hi, As well as the losing memory in CAB with animated GIFs I have found that when attempting to print a page from CAB v2 and 2.5 with MagiC5.1 running the prg freezes with msg:"Memory block destroyed by user program" followed by MCB = $0021AE44, Data of MCB: $08060806 etc. "System dump to disk: y/n." Putting in y gives "Program will be terminated". If printing under TOS is attempted it works OK. Any suggestions? Cheers, Nigel Williamson.

From: outrider@anv.net
Message-ID: <1053_outrider@anv.net>
Source record: 104814

Why does CAB take longer loading a pic in Falcon high-color than it does in 256-colors, where dithering is involved? Is it because high-color taxes the Falcon's CPU so much that it more than makes up for the difference in speed caused by dithering?

I just did a test, and you're right.

g> BTW, in 16-color-mode, I don't change any color at all. I noticed
g> all kind of annoying problems with other programs in this case.

Imagecopy allows you to use the screen colors or the best possible colors,
with an extra option for the latter to remap the colors so they are ordered
as close as possible to your desktop colors.

>> and change the other 240 colors as needed?
g>
g> I change 216 colors as needed, starting with 'index' 32 (note
g> however that there are different kinds of indexing to use!).

That's fine. The key is to not mess with the first 16 colors without leaving
all 256 colors alone. Most programs (including Imagecopy) don't make this
distinction. They either leave all 256 colors alone or they change all 256
colors (or at least the first 16). Neither solution is very good, especially
if you're trying to create background pics.

g> This approach has turned out to be rather common (consider the
g> [in]famous "Web-palette", as used by Netscape, and I chose the
g> same before knowing about Netscape), and I still consider it
g> the most consistent solution in this mode.

Can't argue with you there. However, I noticed in my test that it messed up
my background pic, and it wasn't restored even after quitting. Neither
Imagecopy (even when configured to not use screen colors) nor CAB do that. I
wouldn't think that would have anything to do with the way you're choosing
colors, but I could be wrong.

Also, why does 1stGuide take over the entire system when loading a pic? I
can't even use MagiC's Alt-Cntrl-Esc, even with 1stGuide installed as an AC

Hold down the Alt key during bootup. This brings up a simple desktop
with no HD. Run the Atari AHDI.PRG from a floppy. Click on Install
Devices from the desktop (or install Drive C manually from the
desktop). Access drive C and the Auto folder.

My original reference to GEMDOS mode had nothing to do with the way
NEWSie writes files. It's just that GEMDOS is more tolerant of the
offline partition corruption, which I suspect NEWSie caused in the first
place. Kobold, installed for certain file operations, doesn't use GEMDOS
(although it can). It's afterwards, here in Kobold, that I notice the
corruption.

6063. SOUND.CPX Crashes

Newsgroup: comp.sys.atari.st
Date: 1998-03-25 00:00:00 UTC
From: roughley@HORMEL.unix.dsoe.com
Message-ID: <6fbt7v$pbi@thoth.portal.ca>
Source record: 104825

I can't get sound.cpx 1.00 to work on my TT. Everytime it's called up a crash occurs. The newer sound.cpx 1.20 won't work either because of the prompt "Stereo Sound Is Not Available" (strange...). I did a complete re-install from original Atari archives of Xcontrol 1.31 and the CPX, but the problem still persists. What's strange is that sound.cpx 1.00 used to work at one time (much has changed with my TT, so there's now a conflict somewhere). All the other CPXs I normally use work fine. My old sound.cpx actually does work, as the volume setting is what it should be, but calling it up is impossible. Under Geneva/NeoDesk I get 11 bombs. Is there another TT sound.cpx besides 1.00 and 1.20?

> caused by dithering?

I can't tell what CAB does, but I would like to point out that for decent
image display in high-color you must apply dithering as well!
That's what 1stGuide does (not Netscape, unfortunately), you may turn it
off by switching from "Floyd-Steinberg" to "Ordered Dither" (because only
Floyd-Steinberg allows flexible adaption to high-color).
Without FS-Dithering, loading is faster, but the results look less decent.

See http://www.esc.de/homes/guivol/fixpix/ for examples and solution.

On the Falcon, I would expect image loading in high-color to be faster
than in 256-colors even with FS-Dithering in both cases, due to the
noticeably less efficient screen management in 256-colors.
This depends on the software design, of course, and I didn't perform
exact timings. But I guess it is true for 1stGuide.

Regards,
Guido

You mean to say you're losing memory in CAB even without NOVA VDI? This
would correspond to what Terry also stated, although he thought the type
of GIF had nothing to do with his problem under MagiC. I'm confused <g>.

There is version of the SC1224 that have a cable that needs to be pluged
into the monitor. The PS3000 monitor has the same cable. If you are
having a had time finding one if I remember correctly Kenwood or Sony
use the same cable with same connector for a Car CD player. The cable
does exsist and if you cant find one one can be made..BTW, I have one
But, it is NOT FOR SALE :(

SpannerWerksï¿½ ï¿½Jeez, I still have that?!?ï¿½ Auction

Just a little auction to clear out the Atari ST & 8 bit debris in my
room.

AUCTION RULES:

1. Standard rules apply. Please mark all bids with the subject line
"Auction" so I can quickly separate them from other emailsï¿½messages so
marked will get first priority!

2. Items will start a Going, Goingx2, Gone phase Friday, April 12th.
At this time, items' status will change after every two-day period
without
a raised bid. If an item fails to attract the assigned minimum bid by
Sunday April 5th, it will be pulled from the auction.

3. Minimum raises in bids are in $1 increments.

4. Updates will be posted every other day to both the newsgroup and the

participants. Please let me know if you wish to be taken off the
mailing list for the auction. I will only confirm bids by email for the
highest
bidder on each item.

5. Only the highest bid will be listed. On tie bids, the first one
received will be registered as the high bid for that item.

6. No lot bids except for the items already listed as lots.

7. Payment must be made by money order or personal check. If you're
bidding on more than one item you may pay for all your items at once.
However, if after two weeks following confirmation of final total I have

not yet received your payment, the items are forfeit and the next
highest bidder will be contacted.

8. Shipping will be by USPS or UPS, whichever is cheaper for you if you
have no preference. Prices do not include shipping. Prices are un US
dollars. International bids OK.

9. Detail on condition of item available upon request. Let me know if
you have any further questionsï¿½thanks!

The items:

ITEM Min Bid Curr Bid/Bidder

520STm (1 Mb) $10
w/ PS, Mouse &
Astra EasieST
Solderless RAM
Expander (up to 4mb,
512k installed)

SM124 monitor $10
(curving lower
left corner)

Can you please tell details about your system. You know that such effects
occur with older GEMDOS versions, if they access a GEM partition larger
than 16 MB, after the first 16 MB have been used up ?

You're exaggerating badly. You shouldn't forget none of the ST/TT/Falcon
series did exist before the Tramiels took over. They created our beloved
machines. Their only (bad) fault was adopting the notion that marketing
wasn't necessary. That's fatal of course. Then, from what I heard, they
had a fair bit of bad luck with their developers, which caused all delays
from announcing something to actually delivering it, which did the rest.

You're right. ICMP_GMT is (GMT - local time). Therefore is is negative for
people living east of London, and positive for people west of London. The
value -60 minutes that's in the distribution is for central Europe which
is one hour ahead of GMT.

Does it ? It shouldn't !! Can you find out any consistency ?

Unfortunately Computer Direct, despite requests from us, have not yet
placed an order for issue #7 or issue #8 of Atari Computing with us the
publishers.

I suggest you email or call Chris at CD and ask for an explanation.

Best regards

Hadn't thought of putting those into the file. Now they're there.

> From I'd have thought that the likely culprits are ICMP_GMT and
> DEF_TTL, about which I know zip. Either that or it's to do with
> masquerading about which I know less than zip!

IIRC, the ICMP_GMT is the local time difference from GMT, which is 0 ATM. The DEF_TTL is the default Time To Live, which is the maximum number of times a data packet can be passed from one point to the next, without reaching it's destination, before it dies (of old age, poverty and boredom:)

That's how I understand it. If I'm wrong, somebody who does know please correct me.

As for masquerading, that allows more than one machine in a LAN to share the same IP address as far as the internet is concerned. In other words, it means that I can browse using one machine, while news/mail collecting, FTPing or doing other things on a second. It's even possible to browse with two machines at the same time, but the system gets a bit confused if you go to the same site with the different machines.

Fran�ois,

Which model SC1224 monitor do you have? Isn't the video cable hard wired directly into the monitor chasis? If not, what kind of connector plug is there on the back of the monitor to accept a video cable?

SpannerWerksï¿½ ï¿½Jeez, I still have that?!?ï¿½ Auction

Just a little auction to clear out the Atari ST & 8 bit debris in my
room.

AUCTION RULES:

1. Standard rules apply. Please mark all bids with the subject line
"Auction" so I can quickly separate them from other emailsï¿½messages so
marked will get first priority!

2. Items will start a Going, Goingx2, Gone phase Friday, April 12th.
At this time, items' status will change after every two-day period
without
a raised bid. If an item fails to attract the assigned minimum bid by
Sunday April 5th, it will be pulled from the auction.

3. Minimum raises in bids are in $1 increments.

4. Updates will be posted every other day to both the newsgroup and the

participants. Please let me know if you wish to be taken off the
mailing list for the auction. I will only confirm bids by email for the
highest
bidder on each item.

5. Only the highest bid will be listed. On tie bids, the first one
received will be registered as the high bid for that item.

6. No lot bids except for the items already listed as lots.

7. Payment must be made by money order or personal check. If you're
bidding on more than one item you may pay for all your items at once.
However, if after two weeks following confirmation of final total I have

not yet received your payment, the items are forfeit and the next
highest bidder will be contacted.

8. Shipping will be by USPS or UPS, whichever is cheaper for you if you
have no preference. Prices do not include shipping.

9. Detail on condition of item available upon request. Let me know if
you have any further questionsï¿½thanks!

I posted this once, but I'll say it again. The standard C file
routines in Lattice C ARE NOT RELIABLE. I spent many hours trying to
figure out non-existent bugs in a couple of programs and ascertained
FOR SURE that the Lattice C standard file routines will fail to do as
advertised on occasion. This is particularly true when working
with multiple accesses of the same file. People using Lattice
should use the GEMDOS file routines if they want their programs
to be solid.

Dave,

I have been using Diamond Edge (v.2.03) and HDrive (v5) all the time
with no problem with both an EZ 135 and SCSI ZIP drives. I just check a
cart in the SyQuest with Diamond Edge and it reported the size at about
134.5 megs, HD Utilities reports 128.0 megs. I think that HD only
reports the amount of room left for actual data. I am sure that Uwe will
step in and set this all straight :).

Keep in mind that HD will only work with Atari compatible
partitions, if the media has been partitioned with another program. As
Diamond Edge can partition BigGEM partitions both as Atari compatible and
as ICD, you need to be careful which one you chose.

My only observation is that it might be something to do with your
environment paths, I have a HOME=C:\USER\ path set in magx.inf and both smu and
smusetup find the start.set in a DEFAULTS folder in that path.

With your picture loaded into Gemview click on the 'Gem-View" text in the
window's title bar. Choose "Extern" in the resulting menu, "Print" and then
whichever printer takes your fancy/is installed - you'll see "GDOS printer"
if you have NVDI/GDOS installed with a printer.

>Having researched printer driver problems on the ST for sometime,
>(most programs don't even list HP printers, they are so old), I
You must be using some extremely antediluvian progs since the HP range
is about the most well-supported printers for the ST.

Yes, the cable is attached directly to the monitor (at least on my one).
But, I seem to remember that some SC1224 had a scart/peritel connector,
and required a scart cable. However, SCART is mainly a euro standard, so
I don't think such monitors would have been sold in North America.

```
It also depends how Mb are count : is 1 kb = 1000 b or 1024 b ? 1000
is logic because of usual meaning of k and M, but 1024 is also used as a power
of 2, which is usual in informatic :-)

135 000 000 bytes / (1024^2) = 128,75 Mb so 135 Mb = 129 Mb :-)

May be it's simply something like that...

Right you are. (I don't HAVE these programs...)

> > Most of the connectors inside are for exoansion cards like CPU speeders
> > and graphic expanders, also for Fast RAM.
> Is there an internal SCSI connector ?

No, sorry. Only IDE internal, SCSI only external.

> Can I add Fast RAM independently to normal RAM ?
> Err... and what is Fast RAM ?

"Fast RAM" is the TT compatible Alternate RAM above addresses of 16MB. The
lower 16MB address room is reserved for compatibility with STs, therefore
called ST RAM (only 14MB because of hardware register room).
"Fast RAM" it is called because it is faster; the video processor cannot
access it (at least in a TT).
With Fast RAM expansion boards you can offer your Falcon more than 14MB of
RAM if you want to.

> computers?

Most ATARIs will survive the year 2000, but there's the same problem again
in the year 2079/2080.

Generally the GEMDOS date format allows to encode dates between 1980 and
1980+128 = 2108.
But GEMDOS does probality checks (in 1985 a date 2080 was NOT
probable...), so any time you will get problems.

Besides, data base programs sometimes only use the to last date digits, so
they will fail in 2000 when they calculate with dates.
Best example: Adimens ST.

No, this has nothing to do with what you mention -- my offline partition
is a small 9MB. I do use chk_ofls.prg, if that would have any bearing on
things. But the corruption problem is rare, so it's hard to pinpoint a
pattern. It's so strange, though, to see the corruption -- multiple
folders and/or files will have _exactly_ the same name. That's when I
know I've run into trouble <g>. It happened under STiK and ICD Pro, and
it still happens under STinG and HDDriver (not that they're to blame in
any way). NEWSie is always a factor, but to be fair, it's problem-free
99% of the time).

I can use a TV with my ATARI STe (ok we all knew that) , If that TV is
also hooked up to the video.. then all I have to do is press record
and whatever I am using on the ST will be recorded....ok so far ?

A couple of questions that are going to seem very lame, but are more
for confirmation before writing an article I am planning,

Can you do the above with a Falcon?.. attach to a TV ,

What ATARIs can't I do it with?

And is all the above possible in other countries (blush) lame
question.. but needs confirming please :)

6100. Cab Problems

Newsgroup: comp.sys.atari.st
Date: 1998-03-26 00:00:00 UTC
From: atari@gis.net
Message-ID: <6fdq9d$s57$1@usenet52.supernews.com>
Source record: 104497

Hi,

I'm using Cab 2.5, latest version of STiNG, setup for PPP, under
Magic 2.01. On a TT030 with 4 megs each of ST and TT RAM. 33.6k modem on
modem port 2 with HS modem software. Almost forgot, the latest Cab.ovl 1.28##.
I have 2 problems..

#1 When Cab is loading a page, all of a sudden the status line
will disappear. Then the drop down menus will all be in a lower
rez/larger font. The screen is not updated correctly, It will
display the menu but not erase it. It pops down like it should,
it also lets me select an option.

I've reinstalled CAB and the Cab.ovl. But It still happens.

#2 I also get alot of "type 1 errors" and Cab crashes.
I noticed it's mostly when the modem is running around
3.5-4.5k sec.(From the status line)

Any thoughts?
Rob Mahlert

I have Mega STe with AHDI 6.061 (of course it's named SHDRIVER.SYS and it's located in C:\, because my disk is auto-booting) and it works this way: if you press Alt key while loading AHDI, then it exits and no HD driver is loaded. If you press Ctrl key instead, then HD driver is loaded (you can acces HD), but Auto-programs are not loaded. You can try this. If it doesn't work, you can use previous method by John, of course.

> Can you do the above with a Falcon?.. attach to a TV ,

All depends on how you hook up to your TV

My Falcon has an RF Antenna socket, so I guess it should work too. STM's, STFM's, STE's had an RF socket. MegaST's, plain ST's, and STF's for sure didn't have one, and my guess is that neither do Mega STE and TT's, Hades or Milan.

STFMs and STE sold in France didn't have the RF either.

However, if you're using a SCART/Peritel, then the RF Antenna is no longer an issue, and you can connect any ST(F,FM,E), MegaST(E) and Falcon (maybe TT also), provided you have the correct cable.

> And is all the above possible in other countries (blush) lame
> question.. but needs confirming please :)
>

As I said, France is particular, as SCART was the standard, and there are no RF Modulators on french machines (except Falcon), but then again, all VCRs here have SCART in and out ports, so it's no problem.

Phew, a bit complicated.

> I could get it.

Teh Game runs in Pacifist. You can make a screenshot from it. The
sound has never been converted to a .mod file but there are
ym players for PC's available. Go to the Pacifist hoem page
and follow the link to the ST Sound Pleasure Dome. More
info is available there.

The game is available at:
http://www.umich.edu/~archive/atari/Games/Puzzle/
name: matchit.zip

Source record: 104507

I am thinking about getting set up to be able to go on the web,
but with all the postings, I am totaly mixed up as to what to use.

This is my setup that I figure I'll use.

Atari TT/030 4meg ST ram / 4meg TT ram 548meg scsi hard drive inside,
Monochrome vga (I guess) monitor used in TT Med.rez 14.4kb modem,
127 meg hard drive via ICD host on the Atari DMA port (Hay it works!)

Somewhere I've got Genva I can use too. Is there anyplace a text file
that can tell step by step what I need to get and/or use to set this
machine up for the web via CIS?

6112. MegaSTe, No Audio? Whats wrong?

Newsgroup: comp.sys.atari.st
Date: 1998-03-26 00:00:00 UTC
From: kws@Radix.Net
Message-ID: <6fe86v$e1d$1@news1.Radix.Net>
Source record: 104509

I have a Mega STe, TOS 2.06 (Also tried 2.05) 4 Megs of RAM (also tried 1) and all seems to work (haven't tested the serial ports and printer port) but I can't get any audio through either the RCA connectors or the Monitor. I was wondering what chip on the MB could have gone bad.

I think I remember seeing a message posted a while ago about a chip controlling sound that also had some control over the serial ports, but I was unable to locate the message on Dejanews.

Thanks!

BTW, this is a motherboard that I got from Toad computers....

Two options:

#1 -- When the HD is located, press and hold <Alt - A> (Hmm, I THINK it's <
Alt-A>

#2 -- Boot from floppy, then run your driving software from floppy (what I
usually do).

Mega STE sold in Belgium did have an RF antenna socket, the only model
which didn't have was the TT I guess.

>STFMs and STE sold in France didn't have the RF either.
>However, if you're using a SCART/Peritel, then the RF Antenna is no
>longer an issue, and you can connect any ST(F,FM,E), MegaST(E) and Falcon
>(maybe TT also), provided you have the correct cable.

On the TT030 it's not possible because the TT030 do not accept older
screen models ... the TT owns a VGA like output and don't allow the
use of such old monitors, but I saw in an older french ST Mag that it was
possible to use some electronic box to transform VGA signals to TV
signals ...

This was MAXI CONVERTER PRO PC/MAC > TV
and had a S-VHS output and costed about 150 $US.

I have big problems with PPP-connect.
It used to work very good but now for some
reason it doesn't work at all.
I do get a connection with my provider without problem,
but that's all I get.
As soon as I choose a link in CAB the computer locks
and I have to reboot.(Not the wrong cab.ovl!)
Same thing with get_ip.prg,the moment I hit the resolvebutton
the computer locks.
I tried to reinstall,but no change.
Any hint or suggestion would be appreciated

Interesting. In the USA, Public Domain (PD) means that anything can be done -
- the public owns the copyright. This is as opposed to the various variants
of Freely Distributable (FD), in which the author has decided to retain
certain rights specified by him, but is allowing the copying and distribution
of his work. Freeware, shareware, postcardware, and most commercial patch
programs are examples of FD. I find very little PD anymore, frankly.

Uh, John?
You can't delete the hard drive from the O.S.. You might have:

a) deleted the hard drive icon from the desktop.
If so, choose drive A, select "Install Drive" from the "Options" menu,
and create a "C" drive icon.

b) deleted the h.d. booting software
If so, get a floppy containing AHDI (I'll mail you one if you can't
find it via the Internet -- it's FD) and reinstall it.

c) deleted the monitoring file that gives the HD time to spin up
If so, start the TT, then press the "warm reset" button on the back

d) damaged the hard drive
If so, send me $25 and I'll send you my spare 50 MB SCSI 1 (or go buy
yourself a SCSI 1 compatible drive)

e) damaged the SCSI board
If so, this could be a bit expensive -- but it is very unlikely

I've given the long reply here before and won't take the time to repeat it
(email me if interested). The short reply is -- "NO". The operating system
will be fine -- certain programs (like Homeacct) don't like the year 2000,
though, and there is nothing you can do about it except find another program.
Homeacct is the ONLY program I've found so far that won't work.

><< Neil >>
Sorry, I probably didn't put the above quite correctly. I should have said:
"As well as the losing memory in CAB with animated GIFs prob (which I have
not
personally experienced) I have found etc etc (as above). There's more than
I've given above: after the "program will be terminated" you get again:
"Memory block destroyed by user program" and you get a repeat of the MCB
data
(I've not put it all in) and then: "Try to repair (y/n)?". If you put in y
and return the prg returns to desktop. If you install from CAB.APP you get
the CAB prg, which works normally, except if again you try to print a page
you get "printer not responding". Seeing "memory block destroyed" for the
first time was rather alarming <g>. Cheers, Nigel.

>What ATARIs can't I do it with?

ALL Ataris provide RGB and Sync. so connection to TVs is possible if
the TVs have SCART input (true of most modern ones).

In some cases the composite video outputfrom the Atari will be
acceptable to a TV (but not as good as RGB).

I guess not ALL Falc modes will be possible as the TVs will probably
not manage the higher frame rates.

If you are after connection to a non-SCART TV then you must use a
modulator (STM and STFM only). You can get free-standing modulators to
do RGB -> UHF (about 25UKP) but this is all a bit of a bother for a
rather sub-standard display.

>And is all the above possible in other countries (blush) lame
>question.. but needs confirming please :)

For the SCART solution, yes. For comp. video or via modulator it's not
so obvious as signal codings are not a global standard.

This must be good for non TOS environments like MagiC? Am I correct? It would be nice if the M&E System Folder could be enhanced to support a multimedia library that is installed in a system specific way. Guide lines could be set so that the calls would all be the same regardless of the system but the library code would be optimized to utilize the system's hardware in the best possible way. This way, game programmers can write general code for all GEM systems and the M&E libraries will be utilized to provide the best library calls depending on whether the system has a DSP, 68881/2, Blitter, PPC, 68000, 030, 040, or 060. If the QuickCam were made to be used on Ataris such as the MegaSTe and the TT, voice annotation, and telephony capabilities could be added via the microphone and video conferencing and video-mail could be added. This would also help to allow a move from 680x0 to PPC based GEM systems. Shared libraries are desparately needed since the diversity of GEM compatible systems can be 680x0 or PPC based, (thanks to MagiCMac).

Wonder if he'id take $2.25 for that dos box? I could use it to hold up
my car while working on it! Hay I could put its ide drive in my Falcon!

With my cute little RGB adapter, I can hook my Falcon up to video in the
manner you describe in the USA. Don't use it much -- but it does work.

Super! Works brilliantly on my DirecT60. I always had a floppy with
AHDI.PRG to hand - not needed now I think!

Re: "Losing memory in CAB", guy@swampdog.demon.co.uk scribbled the following
on 26 Mar 98 @ 06:42:56:

g> I dunno how Alexander does do it but either way it has to be a
g> compromise. If you allocate the whole lot then it may end up being
g> wasted through non use.

I don't see that as a problem. If I didn't want CAB to use the memory, I
wouldn't have assigned it that memory to begin with. And there is a separate
setting to make sure it keeps a certain amount of memory free, so I don't see
any problem with "wasting memory."

g> My personal opinion is that fragmentation would not be the problem it
g> is if only other programs were not so quick to grab large blocks when
g> smaller linked ones will do.

Agreed. I wish programs would only grab the SMALLEST available block that
will do the job. But I don't think that's applicable here. I don't do
anything else while using CAB (except occasionally one of CAB's modules), so
CAB is not competing with any other programs for available memory. And the
fragmented memory problem occurs even when I don't use any of CAB's modules.

g> Anyway ... that partial solution. Run another program and get it to
g> allocate a large chunk of memory. This will keep it from fragmenting
g> until you want to use it. If you don't have a suitable program it just
g> so happens I have a (MagiC only) Gem tool which will do it.

That's hardly practical. Surfing the Web and using the graphics cache is an
ongoing process. It's not something that you all of a sudden need. You need
it the whole time you're on the Web. That's the whole point of that cache,
to have memory set aside to hold graphics, so you're not constantly loading
the same graphics from disk.

Hello,
One useful hint is to check the solderings on the high-voltage transformers' pins. They tend to go bad after a couple of years and need to be re-soldered.
If you need schematics, I can scan them and send to you as attahed e-mail if you want me to. The only problem is that there are several models of the monitor out there, but I believe I only have the schematics for one of them.

Good luck!

Atari 1040STe with TOS 2.06 and 2MB Ram
SC1435 Color Monitor
SM147 Monochrome Monitor
(I have video switcher for these two units)
90MB Hard Drive

LOTS of software, including:
Word Writer ST
1st Word Plus
Silhouette
Pagestream
Qwikforms
XBoot
Warp 9
Daimond Edge
Multi Desk Deluxe
Chessmaster 2000
Stereo MASTER
Space Crusade
Empire
War in Middle Earth
Dungeon Master (was there any ST owner who didn't have this?)
Pirates
Risk

And dozens of other titles. This is a VERY extensive software collection.
Willing to entertain any serious offer, need to sell, or I'll have to lug all
this to the new house. Original baxes for almost all items.
Please e-mail at: demidem@aol.com

6145. SpannerWerks&#65533; &#65533;Jeez, I still have that?!?&#65533; Auction

Newsgroup: comp.sys.atari.st
Date: 1998-03-26 00:00:00 UTC
From: Brigitte & Eric McCormack <earthshaker@pixelation.com>
Message-ID: <351B1F9F.7DAFA4A0@pixelation.com>
Source record: 104592
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

SpannerWerksï¿½ ï¿½Jeez, I still have that?!?ï¿½ Auction

Just a little auction to clear out the Atari ST & 8 bit debris in my
room.

AUCTION RULES:

1. Standard rules apply. Please mark all bids with the subject line
"Auction" so I can quickly separate them from other emailsï¿½messages so
marked will get first priority!

2. Items will start a Going, Goingx2, Gone phase Friday, April 12th.
At this time, items' status will change after every two-day period
without
a raised bid. If an item fails to attract the assigned minimum bid by
Sunday April 5th, it will be pulled from the auction.

3. Minimum raises in bids are in $1 increments.

4. Updates will be posted every other day to both the newsgroup and the

participants. Please let me know if you wish to be taken off the
mailing list for the auction. I will only confirm bids by email for the
highest
bidder on each item.

5. Only the highest bid will be listed. On tie bids, the first one
received will be registered as the high bid for that item.

6. No lot bids except for the items already listed as lots.

7. Payment must be made by money order or personal check. If you're
bidding on more than one item you may pay for all your items at once.
However, if after two weeks following confirmation of final total I have

not yet received your payment, the items are forfeit and the next
highest bidder will be contacted.

8. Shipping will be by USPS or UPS, whichever is cheaper for you if you
have no preference. Prices do not include shipping. Prices are un US
dollars. International bids OK.

9. Detail on condition of item available upon request. Let me know if
you have any further questionsï¿½thanks!

The items:

ITEM Min Bid Curr Bid/Bidder

520STm (1 Mb) $10 102063.112/$11
w/ PS, Mouse &
Astra EasieST
Solderless RAM
Expander (up to 4mb,
512k installed)

SM124 monitor $10
(curving lower
left corner)

SF 354 FDD $5
w/ Cable &PS

SF 354 FDD $5
w/ Cable &PS

IB Drive 5.25ï¿½ FDD $10
w/ integral cable, Manual &PS

Megafile 30 w/ DMA $20

Gary can tell you more than I can, but it looks to me like your provider supports the NEWNEWS command, due to that 230 response. If it didn't, you should get something like "Unknown command" or something like that.

Please let us know the outcome.

That's not true. The Dialer does all the port handling for modem ports,
including setting it active. The only thing the Dialer cannot do is
activating STinG.

Cheers Peter

Hi John,

>Sorry to hear about the problems with NEWSie. My question is: Did you
>start using a new version of NEWSie this weekend? If not, could it be
>possible that your ISP changed something over the weekend?
>
The newsgroup problem went away after a few days. I received email from my
ISP saying that their newsgroup server had been having probelms and was now
fixed. No more problems retrieving messages but only followup
posts ever appear. No new posts. Strange!

>What FTP problems?

When I try to use FTP to update my web page on Delphi, Newsie
rarely comes back with a directory list. The window is usually
empty. Regardless, if I try to post a file anyway to the top
level -- I can't go down further because I don't see the directory,
it will stop the transfer part-way most of the time. The log
file doesn't show any problems. The only clus I have is that
Newsie says "Retrieving directory" and never gets beyond 0 bytes.

Is this Delphi or Newsie?

6150. Newsie not posting

Newsgroup: comp.sys.atari.st
Date: 1998-03-26 00:00:00 UTC
From: gevans@sysnet.net
Message-ID: <6fc8j4$m9p@unix5.sysnet.net>
Source record: 104597

This isn't a followup to "Newsie and fonts" but I've found that only my postings designated "followup" ever make it here. If I try creating a new post, it appears to send but doesn't appear. Is this an option setting somewhere?

Greg

Yes.
> >
> > What ATARIs can't I do it with?

Models with no RF modulator require RGB adaptor as described by the
other post below. These include some editions of the 1040 ST. Also the
Mega ST. A Genlock is available for the Mega ST, allowing broadcast
quality video output. The TT also has no video output. Not sure about
the Mega STE. Stacy has no video out either I believe.
> >

Not sure how shipments to other countries varied from US models.

Since the problem started when you installed the card's driver disk, obviously something installed by the disk either a) is incompatible with the STE, or b) incompatible with something else in your configuration (auto prgs and accs), or c) the driver install is corrupt. You can't do anything about a) except try it on another computer. You can disable all other accs and prgs that auto boot to check for b). To check c) you have to get another copy of your install disk.

HS>> Guide specifically for JPGs and MPGs
o>
o> Imagecopy is extremely fast at loading JPEGs on a Falcon, if you use
o> JPEGD.

I'm sure, but I don't have one on this TT. An example 86k JPG (2.15Mb
uncompressed) gets dithered to a 256 colour display in 73 seconds, compared
to 34 with 1st Guide. For simple viewing it's just easier...

>machine up for the web via CIS?

This is not a step by step, but if you read the docs with all the software
packages, you should be able to get going.

What do you need ?

- A Web browser : CAB 1.5 (freeware) or 2.x (commercial)
- A TCP/IP package : STiNG
- A Mail/News Reader package : Newsie 0.86

Optionally:

- An FTP Client : aFTP (or Newsie, that does the job too)
- IRC, Telnet, etc...

Plus:

- CAB requires an Overlay to run with STiNG : CAB.OVL
- It's generally better to use the improved serial port driver: HSModem 0.7
- STiNG requires the eXtended Control Panel for configuration: Xcontrol.acc

Set up the whole thing with HSModem first, then STiNG, then whatever client
software you'll use.

The URLs to get all these package can be found in the Quick FAQ.

Oh, and I seem to remember there are some particularities regarding
connection to CompuServe, as they use their own "standards" for somethings.

Cheers,
Nick

6157. New at Systems For Tomorrow (March 27th)

Newsgroup: comp.sys.atari.st
Date: 1998-03-26 00:00:00 UTC
From: sales@SystemsForTomorrow.com
Message-ID: <6fgt4g$4gi@uucp.tfs.net>
Source record: 104604

New at Systems For Tomorrow March, 27th 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~~

Power Up+ for TOS Computers $22.99
This update to last years Power Up adds an array weapons to your autos stock equipment. Now if you can't beat your friend, you can shoot them. Power Up is pure racing fun, now with optional violence! Existing Power Up owners: EMail us about the FREE upgrade to Power Up+. From Empty Head Software.

Ultimate Virus Killer 2000 for TOS Computers $19.99
The Ultimate Virus Killer 2000 (version 8) is probably the most versatile and definitive product in the battle against computer viruses on the Atari ST/STE/TT/Falcon; a full- fledged tool that has taken many years of painstaking development. You can use this tool to de-infect your disks and programmes, destroying the viruses and leaving all other information and data intact. UCK2000 will recognize and destroy over 100 viruses! The full version is only $19.99, upgrades from any previous version are only $7.50 (requires the return of your origional UVK disk.)

Atari Computing Magazine Back Issues $9.99 each
Issues #4, #5, #6, #7 and #8 of Atari Computing are available by special order as back issues (while supplies last.) Back issues are shipped when the next new issue arrives. Order now to insure delivery with issue #9.

Atari Computing Subscriptions
In addition to our standing order option, we are now accepting 3 and 6 issue subscriptions to Atari Computing. Here's the deal:
(Prices include Reader Disk and delivery to US or Canada.)
Standing Order: $11 per issue (must have a credit card)
3 Issue Subscription: $30
6 Issue Subscription: $55

Suzy B's Treasury Vol 2 CD $29.99
This CD from Suzy B Software continues the tradition of bringing you "a honey of a deal." It includes the best in Atari PD and Shareware, all clearly described by "The Unabashed Atariophile" of Z*Net, AEO and ST Report fame. It's been three years since the first collection and thousands of new files have arrived. Most files are compressed in ZIP format in order to fit more data onto the CD. We also have received more copies of the origional Suzy B's two CD set, now also priced at $29.99. Or take both volumes (3 discs) for only $47.98! From Suzy B's Software.
~~~~~~~~~~~~~~~~~~~~~~~~~~~

Link 97 for ST/STe/TT $89.99
Easly connect harddisks, CD ROM drives, streamers etc. to your DMA port. Technical features: SCSI 2 Commands (Harddisks above 1 GB can be used), Parity, SCSI Initator Identification (Harddisks like the Quantum Fireball series can be used), You can connect up to 7 SCSI devices. Note: Does not include driver software. From WB Systemtechnik.

DTP+G Desktop Publishing CD $39.99
A desktop publisher's dream! This CD contains over 3,600 fonts in Calamus, True Type, Postscript, GDOS, Signum, and other formats. It has over 8,000 pieces of clip art as well as DTP support programs, printer drivers, word processors, font editors, CAD software, printer utilities, and more. Over 90% of this CD is in English! It also includes four commercial packages: Family Roots I, DegasArt, Edith Pro, and X-Lator. From Floppyshop.

Scan X: UMAX for TOS Computers $49.99
This new edition of the Scan X scanner drivers provides support for the UMAX Astra 1200s and VISTA S-12 scanners. A MicroTek E3/E6/35T+ version is also available. From Homa Systems.

Electronic Cow!
Three cool music applications! For more information check out the Electronic Cow link on our web site!
NEW Electronic Cow programs coming soon

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Also Available:
HD Driver 7 $49.99 The best Hard Disk utilities
CAB 2.5 $49.99 HTML browser /w PPP socket for MagiC
Atari Works $79.99 Easy to use home/office suite.
Lattice C 5.6 $139.99 C Compiler.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

B> prevailiant amoung Us Atarian's?..Comments?...

I use a networked P166 all day at work under W95 - a dog such as this is soul-destroying tbh. I've been thinking about getting a PC for about 4 years and the realisation that a P166 would've been a dream back then makes me count my blessings. There's a few things the PC has that I don't have here, but I'm just glad to get home...

g>
g> In 256-color-modi there are *always* problems with palette switches.
g> There is no perfect solution, and different people prefer different
g> compromises, after my experiences.

I agree. Imagecopy saves the palette until it quits and then restores the
original one, Positive Image doesn't restore the palette on quiting and
Graftool is interesting because the palette used depends on the position of
the mouse, even while the program is running...

g> The behaviour of 1stGuide is what I consider 'reasonable' and
g> consistent under these circumstances. Your mileage may vary.

What is it in particular that prevents the palette being stored when the
program loads and quiting on exit in this resolution?

g> I have made special provision for optimal High-/True-Color support in
g> 1stGuide, which I consider more important if you are concerned about
g> image display quality.

Certainly. There are no problems in 65k or 16M colour modes.

r> Yes, that's how to do it, Harry. I use COPS to run a handful of CPX
r> at boot-up and then disappear from the scene after a couple of
r> minutes. You don't actually have to 'Enter' the CPX, they just have
r> to initialise themselves using the previously Saved values.

No, what I'm saying is that if I just have the CPXs active in ZControl I will
get a 19k2 connect.

To be more explicit, I've found I have to enter the Dialler
Config/Miscellaneous settings, confirm that modem 2 is active and that the
Dialler is disconnected. Then I enter the Serial CPX, switch to Modem 2,
increase the baud rate to 38k4 and change flow control from None to RTS/CTS.
Whether I save this setting or not, it makes no difference.

STinG runs after my standard HSModem settings with DRVIN and SCC that have
worked for years...

PR> The Dialer does it all automagically. Especially, don't set the port
PR> to "Active" in the CPX.

Ok, I've ensured that Modem 2 is not saved as Active in the CPX. The Dialer boots up Disconnected and Disabled. If I log on I get a 19k2 connect through Modem 2 (half way there). How do I ensure a 38k4 connect without intervening with the SERIAL.CPX?

There is a old program (from 94-95 something) for the Falcon under MiNT which
is almost what you want. You can use it to controll different actions like opening,
closing quitting etc. with the help of the DSP. I would guess that it would be
possible to do something like this on the Falcon if you use the DSP. After all,
this is what a DSP is made for. ;-)

On the CLAB Mark-X there is one. Maybe on toehr CLAB models as well.

> Can I add Fast RAM independently to normal RAM ?

Nope, you will need to get an Afterburner040 or a MightySonic030 to get it.
Unfortunately you cant get hold of either any longer so everyone who wants
more memory in their Falcon in the future are out of luck. Sad but true
and as normal the Atari users doesn't want to spend any money so the
few companies who develops nice hardware have to stop. The only people
who lose are we.

> Err... and what is Fast RAM ?

It's a kind of RAM which can't be used for graphics and therefor the CPU
doesn't have to fight with the video hardware for accessing it. On the
Falcon it also means that it's accessed at 32-bits making it MUCH faster
than normal Falcon RAM which is slow like hell.

What do you mean "I deleted the hard drive from the OS"? Is the hard drive
still physically installed and working? Do you possibly mean that you
deleted the hard drive icon from the desktop? If that's what happened,
simply click on "INSTALL DEVICES" from the OPTIONS pull-down menu on the
desktop and all your icons will be reinstalled.

If that's not the problem, how 'bout trying to explain yourself a little
better so we can understand exactly what's wrong.

Hello John,
What do you mean "I deleted the hard drive from the OS"?
Do you mean the icon? If so just go to the Options menu and select "Install Devices" and it will provide icons for any partitions it finds! If you mean you've formatted the drive, then that's another matter!

probably not ... speech to text very processor intensive, 8Mhz too
tight. Even fast PCs are still pretty crap at this. If no-one else
replies in a few days I'd say 'no'.

Jim.

Also you can pick-up a 2nd hand ST for less than 100 UK pounds,
Falcon's still fetch a few hundred and I've never seen an audio
recording ready set-up complete with Cubase Audio Falcon for less than
600 UK pounds.

HI!
I have a TT030 . the monitor I am using is a NEC MULTISYC 3D.
(SVGA) However no matter what I do with my fine tune controls, I get
a 2" margin on each side of the screen. I have had other VGA's
attached to my TT, and it is the same thing. Is this common when
attaching a VGA monitor to a TT, or will a graphic card fix the
problem, or is there a software application that I need? I can live
with it if I have to, but I thought I would ask THE QUESTION>
Please Email me, or post it.
THANX

The TT030's color output is slightly different than standard VGA output. Some monitors can be tweaked internally to expand the horizontal, vertical and centering of the display to give you a full-screen display on the TT030. If you're not comfortable working inside the monitor's case (remember there is HIGH VOLTAGE inside), then I'd recommend you take the monitor and your TT030 to a television service shop and let them try to adjust the internal pots to expand your picture to a full screen. Make certain you also bring a graphic program that can generate a circle on the screen so the displays proportions can be properly adjusted.

Source record: 104668

Hi

I've recently bought myself a used Mega STe. With this computer I got a

used Spektrumgrafikkarte (by Wilhelm Mikroelektronik GmbH) on the deal.
Now I've been trying all weekend to get this card to work. The card is

installed into the machine and I've formatted my harddrive (to ensure
that there ain't any conflicts with other progs). After I've installed
the HD driver, copied the autofolder from the HD utilities disk and run
the install-program from the graphic-card disk, I'm resetting the
machine. But during the boot-up, it crashes. How am I going to get
this thing to work?!?!?!?!?!

Please help me if you can!
(any tips, hints and step by step guides are VERY appreciated)

Thanks in advance

Rolf Anders Storset

It is more the "feel" of the memexamn output that is important than
the details. Although memexamn might say Cab owns the memory it may
not have been allocated by Cab depending on how the vdi works for
example. However, the block sizes may make it apparent to someone in
the know exactly what did allocate it and if it is a bug or not.

>about 1 meg. And only a little bit of the rest of that 4-6 megs is actually
>being used by CAB's cache. The rest is just sitting there unused in small
>blocks.

There is a partial solution. Not brilliant although it could be
effective for some (below).

>It seems to me that CAB should grab the memory you set aside for the CACHE
>right from the get-go, and keep control of that block of memory, so that it
>never gets fragmented. But I'm no programmer, and maybe that's not feasible

I dunno how Alexander does do it but either way it has to be a
compromise. If you allocate the whole lot then it may end up being
wasted through non use. The other way causes fragmentation, it's the
same for all programs. And if you put in an option to choose which
method is used, you not only complicate the code but more importantly
confuse those users who know nothing and care even less what the
option means.

The only possible way to avoid this would be to implement a call on
all operating systems whereby a process could inform the memory
manager it is free to move "address independant" fragmented blocks for
that process together along with a protocol to allow the altered
pointers to be returned to that process - could be tricky. (The usual
solution is for hardware to do this.)

I dunno about Geneva/MiNT but the MagiC Mshrink() call (which reduces the size of a block) can be used to increase a block size as well, which could be effective - provided the memory above is not in use by something else of course!

My personal opinion is that fragmentation would not be the problem it is if only other programs were not so quick to grab large blocks when smaller linked ones will do.

Anyway ... that partial solution. Run another program and get it to allocate a large chunk of memory. This will keep it from fragmenting until you want to use it. If you don't have a suitable program it just so happens I have a (MagiC only) Gem tool which will do it.

Boot the machine with the hard disk turned off. Then turn on the hard
disk and run the hard disk driver yourself off the floppy. Now install
a C: icon onto the desktop. You can now open it and delete the
offending files.

If you haven't got the driver on a floppy then you've got a problem -
in that someone will have to email it to you or you'll have to
download a suitable one off an FTP site.

Note also that some drivers will bypass the auto folder and
accessories if you hold down certain keys from powerup, try all the
CTRL, SHIFT and ALT combinations. If your driver does not happen to
have this feature then it is a very good idea to install an auto
folder program or a boot manager which allows all the rest to be
ignored.

There's a very simple one on my website called WATCH which is designed
for exactly this problem - its not a boot manager, just a tiny program
that if activated (by a key combo of your choice) allows you to rename
the offending program(s) so that it/they don't get executed. Place it
first in your auto folder and you'll never have this problem again.

Although Atari computers may have no problems with the Year 2000, I think some software applications might have a problem. I think that one such application is Home Accounts.

Very odd, perhaps Newsie dropped the file as it was downloading, I had been playing around moving the window around in the background so I could get an idea how many messages had been downloaded.

Also I'm finding that messages are disappearing in one area and multiplying in another - I closed Newsie and started it again to find that there were only two messages in one area and mysteriously the number of messages in another had multiplied. I wouldn't mind but I hadn't read the messages from the shrinking area! Perhaps I'm not using Newsie properly.

>Anyway, I guess it couldn't be that important since I can't remember what I
>was trying to write ;-)
No problem, the only reason that I was concerned was that I wasn't sure whether there was any problem accessing the file as these are my first tottering steps and I'd already been caught out! :-))

>I'll download it again though so I can get that new readme file.
Especially if you intend to spread it, it's only a minor change but a correction of a mistake on my part.

It isn't clear, but there's plenty of (C) scattered in the "About" page in the CPX so is probably best left.

I have my doubts about the validity of this CPX as it seems to allow the adjustment of parameters that are to do with printing using internal fonts rather than the graphics mode that Speedo uses to print.

It's also possible to to end up with a page that's printed with the black at 600 and the colour at 300dpi...

That's a feature only supported by TOS 2.x and later. On a TOS 1.x machine, you need either a replacement desktop (Thing, Ease, Gemini, Neodesk, Teradesk, etc...) or a small PD auto program that I used to have called Opaque. It was quite cool actually, but I can't remember seeing it on any FTP sites, and I don't know if I still have the disk. I'll see if I can dig it out.

Nice pages, but for a recent update news is a bit stale. It is my understanding that CAB is at 2.6 nowaday, not 2.5. And JTS has actually sold Atari a few weeks ago. Trackman has been freeware for at least 6 months.

Nice pages though, very pro-looking.

Yesterday (Wednesday) the entire contents of my Newsie folder were
wiped out. As far as I can tell, it occurred when
a) I was reading for offline (into a folder on a different partition)
b) I downloaded on-line a post which hung up (the three-byte-last-block
problem)
c) I posted a reply to it and sent it on-line.

On inspection, the only thing left in the folder was the NEWSTEST.TXT
version of my post. So far, the OFFLINE folder has never been corrupted.
The NEWSIE folder is in a 100Mbyte partition, of which 21Mbytes is
occupied, on a 1GByte SCSI drive on a Falcon with AB running Nemesis and
MagiC. The Iomega Zip disk drive does a good job on backups (and
restores, with Newsie).

This is in the Quick FAQ.

Get the freeware text editor Marcel (available from most FTP sites). It can read and write RTF (MS' interchange format) and just about any ST text format, including 1st Word.

> that the Tramiels leave Commodore which they founded (which did well
> after they left) and went to Atari and drove that company into the
> ground then make a move with JTS and drive that company into the ground?

Actually, Jack Tramiel took Commodore from a small insignificant typewriter company to a major computer electronics company before selling the company and going into his first retirement. Shortly thereafter, he negotiated the purchase of Atari from Time-Warner, who had taken Atari from its original glory days to the brink of disaster.

Jack Tramiel then turned Atari around with the new 8-bit XE systems and 16/32 bit ST systems, and a lot of overblown hype about a bookoodle of other new prototype products which were promised but never really had a chance for actual production. But the combination of 'real' hardware and hyped prototype promises took Atari to its second round of glory days, where it became a major player in Europe and built a small but solid following of loyal Atarians in the U.S. as well, and became extremely popular with musicians worldwide.

The decline of Atari, of which we're all too familiar, then began -- and could be a great economics study course of how NOT to run a company and market products.

There is a short piece (actually a whole page) in the latest FORTUNE Magazine. April 13, 1998 issue, Black & White covour, :Out of the Holocaust: about Jack. tells how he came to these shore with nothing after his release from a Concentration Camp and built an Empire.

There is about two lines about Atari, it reads...

Commodore was really Tramiel's last hurrah. ..... actually, I don't want to step on FORTUNE'S copyright, so I suggest you either buy a copy or go to the library and read it. Jack and his wife are doing okay. He is living in Monte Sereno, California and has two Rolls-Royces in the garage.

As another wise man told me long ago, Jack Tramiel was good at making money for himself. Atari was just not to be, no matter what the user's had hoped.

>Makes no sence to me.

How do you explain how so many people get on the news and ask how to access the Web with an Atari. I'm quite sure these people have access to the net on some other platform.

Makes sense to me ;-)

Cheers,
Nick

>
> I think I remember seeing a message posted a while ago about a chip
> controlling sound that also had some control over the serial ports, but I
> was unable to locate the message on Dejanews.

I think it could be the Volume tone controller (used together with the DMA
sound in (MEGA) STE and TT.
The chip has "LMCxxxx" written on it (xxxx is a number I can't remeber at
the moment). It is not socketed, but perhaps it's only the power supply.
This is provided by a voltage regulator (correct expression? In German
it's called "Spannungsregler"...) which produces 8.2V out of the 12V.
The last Pin on the LMCxxxx (face to face to pin 1) has to lead 8.2V when
turned on. If not, look for the 3-pin voltage regulator near the LMC. It
can easily be replaced by a new one.

Hope to have helped,
Carsten

P.S.: If this description is too vague, I can verify it at home in my
TT and figure this out exactly...

6206. Connecting Atari sites indexes

Newsgroup: comp.sys.atari.st
Date: 1998-03-27 00:00:00 UTC
From: Frederic Dinh <frederic.dinh@hol.fr>
Message-ID: <351BB3B2.6C04B224@hol.fr>
Source record: 104540

Hi everybody, and especially those of you running a website.

I am collecting URL in order to create an index of french speaking ATARI
websites (including e-zines). It is just starting, and people are likely to
get involved.

I wonder if there is something equivalent for english/american, german,
spanish, etc atari-related sites. My idea is that, if they exist, we could
connect these (just a simple link in fact) and make it a worldwide index.
I'd put link on the english index (ie "wanna read in english ?"), they'd
put on link on my index ("wanna read in french ?"), etc.

I know there is a Webring but not all french people are familiar with
english... that's one of the reason of my website.

You see the scheme ? Those who would like to read in a particular language
would just have to select the appropriate link and whooey!, plenty of
destinations. Let's
imagine a table called "Atarist - Get in touch worlwide" showing different
country
flags. It's more the idea to surf here and there than being searching for
some
download areas or so.

Well, I hope to be clear. It would be great if you could react to this (and
even
greater if you could answer me by mail !)
If those indexes already exist, may their webmasters contact me ?
My first try of index should be readable on next monday later in the
morning.

Bye !

Are we talking about the STinG Internals CPX? OK I guess we're not...
I've disabled the other CPX's so I was only looking at the active
option on the Internals CPX....

BTW...is it possible to have the Dialer as a CPX? That would use one
less accessory slot.

From: collins@bulli.com
Message-ID: <6fgi7j$18k$1@nnrp1.dejanews.com>
Source record: 104545

Hello, I recently installed VI-2, which allows me to use the falcon true color mode in more workable resolutions. Anyways, Shortly doing this, If I boot in True Color under magiC my SCSI drive will Freeze for no reason! It could be set off by anything.. Loading a picture, saving a file...
I have heard that this has something to do with The SCSI and Video Accessing the same circut and overheating it? I have tested this with my internal IDE drive and It DOES NOT freeze.. So it has to be something with the SCSI combination.
Is there a patch for this? Or am i the only one who has ever experianced this?

Well, it looks like you are accessing the net somehow, since you already
have email and news. All you need is CAB then.

Let me know, and I'll send you CAB 1.5 as an email attachment.

Maybe you should have said so in the first place. Most of the people who ask for internet software are already getting here through a PC at work.

Is Flash a terminal program ? If so, you'll need a real TCP/IP connection to run a web browser. What you need is STING, CAB and CAB.OVL.

Let me know if you want me to mail the stuff to you. I have no idea how CompuServe works, so i couldn't "upload" software there, even if I wanted to.

Why would it be, since there's no problem ? The real problem is with any
particular software. The system clock will run happiliy for at least
another 30 years.

As a summary, to ask if Atari's will suffer the year 2000 bug is wrong.
You should rather ask if any particular software will have the bug.

If you have a good email account, the following should work:

first get Doctor Bob's guide by sending a mail
To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

then use the method described to search (Archie) and fetch (ftp-by-mail)
the necessary software. You can ask around for the exact name of
the files, or try getting some web pages (especially Hallvard's)
by email (see guide).

Oh, and you'll need something to uudecode your binaries of course..<g>

Good Luck

Hello!

I'm trying to install the KGMD Mint package on my Falcon (Stock machine,
4 megs of RAM, 68882 FPU, 340 Meg HD IDE, Atari's HD Driver).

Whenever I start the install program, it says it is creating the RAMdisk,
then it gives and error ' cannot cd to 677556' (different number each time).

Next it says it is unzipping the files.

Says the paths cannot be found.

Then it exits with a fatal error # -34

What did I do wrong, or what am I missing? This is a clean boot with
NOTHING installed.

Have install the package before on my 1040 STE with no problems.

I hadn't noticed I'd invented something. It must have happened when I was
doing something else, possibly when reading the docs for some program or
other. I'm not sure which program they refered to though ;-)

> > As for masquerading, that allows more than one machine in a LAN to share

>
> Does it ? It shouldn't !! Can you find out any consistency ?

It has happened a couple of times when checking it on the same site. It
could have been because the same page/graphics were being requesting at
the same time by different machines. It wasn't much of a problem, just a
case of wait for one to finish, or go to a different site.

'em interesting:-|

I use Newsie as my mail and newsreader. I as yet can't get v0.84 &
0.86 working yet! I have come across the problem mentioned, this
mainly appeared when queued postings are sent with automatic
connection.

Also another possible reason may be down to crossposting, as Newsie
seems to slap some garbage at the end of the group line if the line is
too long. Some editors also seem to put a carriage return in the
destination line, which for all tense and purposes gives it a clear
line.

I have very rarely lost postings that have had a good clean connection
to the post server. After editing the posting OFFLINE and returned to

Newsie, you can exit and use an editor to edit the POST????.que files and correct any mistakes if you are suspicious of a possible error.

Although it means a little effort on the user part, I have found that if you connect to the post server yourself from the menu bar seems to sort the problem out for me.

I hope this will be of help to other users, if not I've tried.

My system is a 4 meg STE running under TOS 1.62 & TOS 2.06. Any other details available on request:)

Cheers! for now
Steve

STF is an abreviation for STFormat, a magazine that ceased trading years ago but which used to have the advantage of in store circulation (i.e. you could find it on magazine rackes, even a few places here in California, although it was a British based magazine) and a cover disk. So it was a good way to distribute software across a broad area. Alas, this is no longer a resource, and current replacements like Atari Computing don't have the same dlevel of distribution. You will not find a copy ofAtari Computing a the corner drugstore in High Desert Califnornia.

As for there being '0' PD libraries for Atari in High Desert, that is nonsense. There may not be a storefront for one there, as there is likely not a storefront for any PD library out there, PD libraries not being big money magnets (notice the PD in PD library). Most PD libraries operate via the US Postal Service, and so can easily deliver to you wherever you live in the US (or via other postal services to other parts of the world).

Here's some contact information for US PD libraries:

Frankly, although I would love to have internet telephone service, I suspect
that limiting my talking to other Falcon owners would mean I wouldn't use it
much. More power to you if you decide to do it, though.

Hmmm... Although I can see your point about power surges, I have to admit
that I've done this for years without any errors that I can find (I figured
the surges were about the same as the junk that passes for power from the
electric company). Just how much of a chance am I taking with this? I
suspect not much, since luck has never seemed to particularly favor me where
computers are concerned.

>the Falcons ? was there some version of Speedo, MultiTOS, some special
>CPXs or TOS patches? Heck, the guy I bought it from didn't even have
>XControl on it.

Ok here goes

my F030 was three years old but had never been used so you could say i got an original off the shelf falcon. she has TOS 4.04 and a 209mb ide drive and now uses the 330mb scsi aswell from my STFM

The falcon was shipped with...

MultiTOS (multitasking AES slooowww)
Callapt (appointnents manager)
XControl (Normal stuff but with the enhanced falcon sound cpx and others)
Some desk icons
The manual (not too bad, leads you to belive that you falcon can use a 80386dx266 as a slave processor)
AHDI & HDUTIL (Hard disk installation and maintainace-- not really all that good, STTOOLS is better)
Nope no SPEEDO GDOS or anything flash, in fact for a month after buying my falcon a had never seen a true color picture (now i have apex and loads of other stuff)
>
>If tha manual is anything like the STE's one, then I'm not losing much,
>but after opening up the beast, I would like to know what the various
>components and sockets are. There are connectors and jumpers all over the
>place. It's a TOS 4.04, is this the latest ?
>
no the manual wasn't worth all that much to me, although it does provide an insight to the specs of the falcon and odds and ends (you wont miss it)

>Is there anything else really necessary I should download. I realize I
>should get NVDI or MagiC, but the main financial priority is going to get
>the buffer/clock fixes done for digital audio and probably and external
>SCSI drive.

OK, I have bought MagiC 5.11 from System solutions in England.

For me Magic made my already speedy falcon into something that DOES compete with a P166 with windows NT. Everything is faster and looks great, but.. it is highly unlikly that any of the stuff that was ground breaking on the STFM would work. Some does,

I still love magic and if you have that cash to spare then get it, you won't be sorry, If you want to get online then you should consider MiNT (not multiTOS) but TOSs UNIX like cousin, I have just installed it yesterday and it came highly reccomended from lots of people. (it better be good as it is taking up my F drive with it's minix file system that magic or tos cant use)

>Does anybody know if Cubase 2.0 runs on the Falcon. I think 3.0 does, but

paxton@zetnet.co.uk (Tony Greenwood) wrote:-

>Can you do the above with a Falcon?.. attach to a TV ,

I used to use my Falcon with a TV occasionally.
While at university I created some simple 3D animations, to illustrate a presentation, with CAD3D and CyberControl and recorded them on to a video tape.
When my fellow students saw these tapes first they were surprised by the animations (though they were very simple) and then they were very puzzled at how I managed to get the images onto a video. To do this with a PC would have involved a pretty fancy setup.

I guess some people are easily impressed :-)

Rich.

I have a selection of Atari ST titles for sale.

This List Updated 27/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^

SpannerWerksï¿½ ï¿½Jeez, I still have that?!?ï¿½ Auction

Just a little auction to clear out the Atari ST & 8 bit debris in my
room.

AUCTION RULES:

1. Standard rules apply. Please mark all bids with the subject line
"Auction" so I can quickly separate them from other emailsï¿½messages so
marked will get first priority!

2. Items will start a Going, Goingx2, Gone phase Friday, April 12th.
At this time, items' status will change after every two-day period
without
a raised bid. If an item fails to attract the assigned minimum bid by
Sunday April 5th, it will be pulled from the auction.

3. Minimum raises in bids are in $1 increments.

4. Updates will be posted every other day to both the newsgroup and the

participants. Please let me know if you wish to be taken off the
mailing list for the auction. I will only confirm bids by email for the
highest
bidder on each item.

5. Only the highest bid will be listed. On tie bids, the first one
received will be registered as the high bid for that item.

6. No lot bids except for the items already listed as lots.

7. Payment must be made by money order or personal check. If you're
bidding on more than one item you may pay for all your items at once.
However, if after two weeks following confirmation of final total I have

not yet received your payment, the items are forfeit and the next
highest bidder will be contacted.

8. Shipping will be by USPS or UPS, whichever is cheaper for you if you
have no preference. Prices do not include shipping. Prices are un US
dollars. International bids OK.

9. Detail on condition of item available upon request. Let me know if
you have any further questionsï¿½thanks!

The items:

ITEM Min Bid Curr Bid/Bidder

520STm (1 Mb) $10 102063.112/$11
w/ PS, Mouse &
Astra EasieST
Solderless RAM
Expander (up to 4mb,
512k installed)

>Have the hard drive program on a floppy, boot the machine without
>the hard drive turned on. After your at desktop, power up the hard drive,

And blow up your DMA chip - and maybe more!!!
Since the Atari machines aren't buffered in any way, you should NEVER connect/disconnect or power on/off any externals when the computer is switched on. Through my years as a service technician, I've seen too many bad examples of problems caused by this faulty method of "solving" problems... It may work several times, but then again - it may destroy your precious computer the first time you try it...
There is a bypass in AHDI: press CTRL when it's about to boot up and you'll only read the harddisk driver and nothing in the AUTO folder and no ACC's. You could also press ALT at bootup and bypass the harddisk driver too, but that wouldn't be as fun since you would have to run AHDI from a disk to be able to access the harddisk...

Best regards,
Claes

>
>Anyone who picked up this file and got the SoftPC FSA drive working with it?

Absolutely! As a matter of fact, i have made a bootable 5 M hdf file
with it, that contains the insignia files, a command.com, and the hidden
dos files, including a config.sys and autoexec.bat, that has room for a
complete dos installation. This file will be included in a new posting
shortly, with the whole softPC setup. I have gotten official permission
from insignia to post this new package as freeware, ab long as they are
not expected to provide support.
Meanwhile, are there ANY other files in your original distribution taht
may not be present in other packages, like the missing ones in the TOAD
package. I have tried sending you e-mails, but they have bounced.
Would it be possible to e-mail me your original archive of softPC, or at
least tell me where you got it?

: Netscape or Explorer. Is there anything like that out there?

Yeah, lots of stuff. Most people will point you to a program called CAB,
and with good reason, its a sweet piece of code. Version 1.5 is freeware
and there is a demo of the commercial 2.0 (the comerical version, from
ASH, is up to 2.6 now). Other web browsers I've played around with
include WENSuite (which is a commercial product from Oxo in France and
used to be called WebSpace), and a new program called Adamas, which I am
very impressed with. Adamas will be a comercial package from MUCS in
Germany, but you can download the pre-release for free. Here are some
URL's for you (assuming you have a friend with Netscape or Explorere that
will help you download this stuff, pretty cheeky of me, eh?):

For CAB, go to:
http://www.student.informatik.th-darmstadt.de/~aclauss/cab_e.html

For a demo of WenSuite, go to:
http://wwwusers.imaginet.fr/~oxo/

For a demo of Adamas, go to:
http://dc2.uni-bielefeld.de/atari/edracon.htm

>>>followed by MCB = $0021AE44, Data of MCB: $08060806 etc. "System dump to
>>>disk: y/n." Putting in y gives "Program will be terminated".

If you press 'y' then a file will be written in the root directory of
the current drive which is *exactly* the same size as the amount of
ram in your system. The reason is simple, its a copy of the ram
contents at the time MagiC detected the corruption. You can drop this
file onto memexamn and see a post mortem. Deleting this file manually
is allowed (and recommended) if you have no use for the information.

>If printing
>>>under TOS is attempted it works OK. Any suggestions? Cheers, Nigel
>>>Williamson.

When any running process uses the memory management system MagiC can
(and does) take the opportunity to check all the memory blocks to see
if any have been corrupted. The most usual reason for corruption is
one process writing past the end of its block (ie a bug in that
process). Tos has no such checks and in addition only runs a single
process so these "leaks" can and do go undetected. In many cases the
leak spreads into otherwise unused memory with the result that the
process gets away with it and runs ok.

>>You mean to say you're losing memory in CAB even without NOVA VDI? This
>>would correspond to what Terry also stated, although he thought the type
>>of GIF had nothing to do with his problem under MagiC. I'm confused <g>.

>I've given above: after the "program will be terminated" you get again:
>"Memory block destroyed by user program" and you get a repeat of the MCB
>data

>(I've not put it all in) and then: "Try to repair (y/n)?". If you put in y
>and return the prg returns to desktop.

Whenever this occurs you should reboot at the earliest opportunity.
This feature is there for the sole purpose of keeping other processes
running long enough for you to save critical data. There is no way for
MagiC to be certain the repairs have reconstructed things as they
were, and there is no way for MagiC to restore the contents of blocks
which have been mangled by the errant process.

>If you install from CAB.APP you get
>the CAB prg, which works normally, except if again you try to print a page
>you get "printer not responding". Seeing "memory block destroyed" for the
>first time was rather alarming <g>. Cheers, Nigel.

I don't know the exact details of how MagiC figures out which process
is to be killed. However, part of each memory block contains
information on who owns it. Therefore it is reasonable to assume MagiC
to be capable of killing off those processes whose blocks have been
corrupted provided the ownership info is still intact. Additionally,
it is a fair bet that mangled blocks have been mangled by whatever
process owns the first "intact" block lower down in memory (ie that
process overwrote its limits into the blocks higher up) therefore it
would very a very good idea to kill that process.

What am I on about? Basically, just because MagiC kills off a
particular process does not necessarily mean that process is in any
way responsible for the bug (although it may indeed be). It is
perfectly possible for a process to mangle one of its own pointers and
start writing into anywhere in memory giving the impression that
whoever owns the mangled block is the culprit. So, although the output
of memexamn is usually very useful there are a few times when it can
be positively misleading.

Hmm, still can't figure out why I said all this. Maybe I'm bored!

The hardware will be ok for years yet. As for software, anything that
only (internally) stores the last two digits might give problems.

At least 3 of them, CAB, either freeware (1.5) or commercial (>2.x),
WENsuite or Draconis that are still under development.

You also need other stuff before actually connecting to the net. It's all
the Quick FAQ.

Cheers,
Nick

For starters, you might cruise by my web page at
http://www.tmisnet.com/~strads/atari.html
and select the heading "web software" in the
table of contents at the top. You'll
find the four available web browsers listed,
with links to downloadable sites. You'll find
more information about each at the remote sites.

I'm hoping to add the ftp/telnet/newsreader
programs to the list as I find out what and
where they are!

You'd have to read through the docs for SMU to find the definition for
$HOME, which I guess is meant to be a catch-all for .inf files for all
progs, however it's inconsistant. Look in SMU's Hypertext under
"Installation".

No, just reading messages that occupy more lines than fit the window; scroll the screen and bits from the message window's bottom line deliminator get scrolled into the window. Turn buffering off and it's fixed.

I'll see if I can dig it out. I haven't used it since I upgraded to TOS 2.05. If I have the entire archive (not sure about that), I'll try to upload it to lip6.

The beauty of Opaque is that it works on TOS 1.x as an Auto folder program, but it uses it's own icon format. The package included an icon editor and an attribution editor. It was in German though.

> Another useful program for this kind of thing is "Iconjuggler".

This is all on TOS 2.0x. The originator of the thread didn't specify what machine he used, so I assume it's an ST with TOS 1.x

I have 2 external 14.4 modems with power supplies for sale; one is a Hayes Acura fax-modem and the other is a Zoom fax-modem. Both work well and are in excellent condition cosmetically. They are for sale for 15 dollars each plus
3 dollars shipping. Money orders only (postal money orders preferred). If interested E-mail me at poolguppie@aol.com.

Thanks,
David Wiseman

HS> I'm sure, but I don't have one on this TT. An example 86k JPG (2.15Mb
HS> uncompressed) gets dithered to a 256 colour display in 73 seconds,
HS> compared to 34 with 1st Guide. For simple viewing it's just easier...

They each have different settings, which can effect the performance of both.
For instance, Imagecopy will fly in its least-quality setting (i.e. no
dithering, no remapping, etc.), and I suspect 1st Guide would, too. If you
set Imagecopy to its best-quality setting, naturally it will be slower, but
in my tests, its best setting provided better results than 1st Guide's. That
could be because Imagecopy uses more colors, I don't know. (I never tested
their timings.)

Well if you subscribe to STF or you get one of those catalogue thingies
from a PD lib you'd prolly find CAB bundled in with all that stuff. I know
I have about 4 or 5 copies of CAB just lying around :P

Or the alternative is to build your own browser :P

AM.

I think therefore I AM.

>
>Greg
>.

Hi Greg,

I've had varying degrees of success with posting too, but usually if it doesn't go thru on the first try, it will on the second. I usually save all my postings (partly for this purpose) so I can try the posting again, but instead of retyping an entire posting, I can just merge the saved previous posting. Hope that makes sense. To find WHY, OH WHY!!! your postings aren't going thru, try looking at "Show Log File" option under the "Special" menu in Newsie. Sometimes I get "No servers accepted posting", which I don't understand, but it goes thru when I try again. Go figure.

I hope others will post follow-ups with more informative answers - I'm curious what's going on also.

Good luck,

Clayton Murray
claytone@aa.net

If you subscribe to Zetnet you get ALL the software you need.

Stik - TCP/IP stack & dialler
Newsie - Usenet & e-mail (also text only browser)
CAB - HTML v3.2 compliant browser
Also IRC and FTP clients

>this an option setting somewhere?

After a new post "appears to send", check NEWSie's log immediately
afterwards to see what really went on (in Log Options, make sure Log
Server Commands is checked). After any post, I always look at the log
just to make sure it was sent. You'll see something like this:

240 Article posted
-> post
340 Ok

If there was a problem, you'll most likely see a server error message
(e.g. '441 Article not posted -- more included text than new text'). Do a
test post and see if the log yields any clues. NEWSie doesn't directly
pass on common news server errors to the user -- flickering modem lights
and NEWSie's 'send' display can be deceiving.

Try using a newer MagiC version (There's V5.2 out now I think), whether
this causes your problem or not...

Besides, NVDI 3.x or newer (actually V4.12) is needed to display CABs
color icons correctly AFAIK.

Boot up from a floppy. The hard disc AUTOs will not be executed and
you can delete the offender.

Do you know how to boot from floppy? Put your (or any) driver into a
floppy AUTO folder and re-start.

this browser comes with his own dialer named *Draconis*. It isn't
compatible with STing, Iconnect, MiNT/MiNTnet so it can only be used
with the Adamas browser and Marathon mailreader.
I don't have any experience with setting up the dialer but from what
I've heard it isn't that difficult.

: program? STing? CAB?

Currently, Adamas only works with the Draconis TCP/IP stack. My understanding is there are plans to create a bridge module that will allow the Draconis based software to work with STiNG based software and vice versa, but this is something that will be created in the future. In the meantime, you will have to find a way to get the Draconis package. It can be found at the following URL:

http://dc2.uni-bielefeld.de/atari/edracon.htm

Perhaps the person who e-mailed you Adamas will be kind enough to e-mail this to you as well. By the way, a new update to Adamas appears usually several times a week! The latest version is dated March 26 (check the "CHANGES.TXT" file that should be in the Adamas stuff you got to see what version you have).

Hi Cory,

> Are all new scsi drives basically A/V spec? What constitutes A/V? I
>have heard various and contradictory opinions on this, so any help would
>be much appreciated. Also, is there a list of current drives with these
>specs? Thanks!

Generally, A/V disks have a more stable data transfer than standard disks. This may be needed for video playback, but when it comes to operation with Atari computers, this is of no interest at all. The transfer rate on a Falcon is limited by the hardware to 2MB/s and this speed can be handled by any SCSI-II harddisk. The most important thing about harddisks which should be used with Cubase Audio Falcon is that they mustn't make calibrations every now and then. If they make calibrations, the playback gets interrupted and you'll get the message "HD too slow". A/V disks don't make calibrations, so they always work well.
Many modern harddisks don't need to make calibrations, so you mostly don't have to worry about it...
I know for a fact that on some harddisks, the only difference between A/V and non-A/V, is the PROM on the HD's own controller card (if the customer wants an A/V-disk, they just re-program a standard HD and charge more for the drive). My guess is that this is the case with most brands.
If you want recommendations about which harddisks to use, check out my homepage on the CAF compatible harddisks page.

this?

Hi,
The problem is probably that you haven't had the CPU clock patch made. In most Falcons, the CPU clock isn't stable enough and this makes the SCSI-bus unstable. It's mostly noticed if you use Cubase Audio or, like in your case, at the higher graphics modes. The flanks on the clock pulses need to get cleaned up, which is made by the patch.
You can find a couple of variations of the CPU clock patch on my home page - the Troubleshooting section.

Best regards,
Claes

After long debate, I have decided I need the money and I have to sell my Atari ST.
What I am selling is as follows:

Atari 1040STe with TOS 2.06 and 2MB RAM
SC1435 Color Monitor
SM147 Monochrome Monitor (I have the video switcher for these two monitors)
90MB External SCSI Hard Drive
Nice, under monitor surge protector

Additionally, the software with this system includes:
Silhouette
Word Writer ST
1st Word Plus
Pagestream
MultiDesk Deluxe
XBoot
Warp9
Stereo Master
Risk
Dungeon Master
Space Crusade
Empire
and dozens of other titles.

Almost all of these items have their original boxes and original manuals. These items are all in excellent condition. I would like to sell this system whole for $400. I am willing to entertain offers.
I can be contacted at home: 609-396-8536
or by e-mail: demidem@aol.com
Aaron

> PR> which is one hour ahead of GMT.
>
> Hmmm...I thought it was the other way around. Here we are 8 hours behind
> GMT, so I thought it would be -480,

Use the formula I've given. Consider noon in London (12:00 GMT). It's 4:00
in Las Vegas, so

GMT - local time = 12:00 - 4:00 = 8:00 (+8 hours)

therefore you set +8 * 60 = +480 minutes

ICMP_GMT = +480

Cheers Peter

PS: This is not very important, though. It does not effect normal network
traffic in any way.

That's ok, but there is no connection to activation of ports, which can be
done in the "Port Setup" CPX. The "Internals" CPX does not activate, nor is
in any other way related to, any port.

> BTW...is it possible to have the Dialer as a CPX? That would use one
> less accessory slot.

CPXs are supposed to just configure things, they're not supposed to carry
out any "application tasks". I know there are a few CPXs that do things
like formatting a disk, etc. but they're violating Atari's specs on CPXs
and merely abuse the CPX concept. Pretty bad stuff.

Why don't you just rename the Dialer to DIALER.APP or DIALER.PRG and start
it as a program ?

Cheers Peter

SpannerWerksï¿½ ï¿½Jeez, I still have that?!?ï¿½ Auction

Just a little auction to clear out the Atari ST & 8 bit debris in my
room.

AUCTION RULES:

1. Standard rules apply. Please mark all bids with the subject line
"Auction" so I can quickly separate them from other emailsï¿½messages so
marked will get first priority!

2. Items will start a Going, Goingx2, Gone phase Friday, April 12th.
At this time, items' status will change after every two-day period
without
a raised bid. If an item fails to attract the assigned minimum bid by
Sunday April 5th, it will be pulled from the auction.

3. Minimum raises in bids are in $1 increments.

4. Updates will be posted every other day to both the newsgroup and the

participants. Please let me know if you wish to be taken off the
mailing list for the auction. I will only confirm bids by email for the
highest
bidder on each item.

5. Only the highest bid will be listed. On tie bids, the first one
received will be registered as the high bid for that item.

6. No lot bids except for the items already listed as lots.

7. Payment must be made by money order or personal check. If you're
bidding on more than one item you may pay for all your items at once.
However, if after two weeks following confirmation of final total I have

not yet received your payment, the items are forfeit and the next
highest bidder will be contacted.

8. Shipping will be by USPS or UPS, whichever is cheaper for you if you
have no preference. Prices do not include shipping. Prices are un US
dollars. International bids OK.

9. Detail on condition of item available upon request. Let me know if
you have any further questionsï¿½thanks!

The items:

ITEM Min Bid Curr Bid/Bidder

520STm (1 Mb) $10 102063.112/$11

6306. MagiC

Newsgroup: comp.sys.atari.st
Date: 1998-03-28 00:00:00 UTC
From: dwmoar <dwmoar@teleport.com>
Message-ID: <351DEAC5.3F4FA87@teleport.com>
Source record: 104416

Hey I finally got a copy of MagiC 4. There are a few things that can't seem to figure out and the manual that I got with the software doesn't talk about it.

1st. will it work with BigDOS. When I place Big Dos in the Auto folder I get 2 bombs on the screen (Do I even need BigDOS?) though Magic continues to load and run. It is the 3rd item in the auto folder

Auto Folder
hddriver
magixboot
BigDos
ExtendDos
AutoFMC (clock software)
Pinhead
UIS III

2nd. When MagiC does boot I get all the drive icons, but when I double click on the "O"
icon (my CD-ROM) I get a dialog box to the effect as Access Denied error #-36 what the hell is this error. Where can I find a error list or how can I gain access to the CD unit.

3rd. When I boot and the computer starts to load the UIS III program the machine crashes with 4 bombs. (last program in the auto folder) I would hope that it works with UIS do I need a newer version or a patch to make it work? If not is there a good replacement for it.

4th. Is it recommended to use another desktop like Neodesk or the like. If so what is a recommended one?

Ahhh the last question for now. Just how do I change the icons on the current desktop. It seems that all I have tried doesn't do a thing. Is there and Icon editor for MagiC?

Thanks for all
David

bdc> softPC, or at least tell me where you got it?

Hi Boris,

glad you found it and glad it works. I checked around, but the only thing I had worries about was the COMMAND.COM... but without one you even won't get to the DOS-prompt, so I figured all the others must have had a COMMAND.COM at least.

I never had an "original distribution set", as Soft-PC never was officially released. Mine comes from Atari Netherlands, which was closed several years ago. They had set it up together with DOS 3.30 and several DOS-programs on a Syquest removable, which now lies on my bench.
As far as I could check, it was only the specific Insignia files that were missing to get this FSA drive going, so now the whole stuff should be complete.
It looks like I lost my E-mail connection; perhaps it's about time to hookup into the Net myself :-)

AFAIK those problems are not new and can be solved by a good hard disk
driver, such as HDDRIVER 7.x.

Greetings,
Carsten

6311. CAB/PPP-Connect with Proxies?

Newsgroup: comp.sys.atari.st
Date: 1998-03-28 00:00:00 UTC
From: Carsten Krumnow <krumnow@uni-koblenz.de>
Message-ID: <Pine.SOL.3.92.980328001344.3122B-100000@marvin>
Source record: 104446

Hello internetting atarians!

I have been using CAB2.6/PPP-Connect now for a few months. My ISP is the University of Koblenz which provides SLIP or PPP connections that is used by many students with Windows, OS/2 and other "computers".

Only my good ATARI TT makes trouble when connecting with PROXIES. Without configuring any proxy I can get to the university intranet very well, but no further (limitation of the ISP).

When I configure manually the correct proxy servers (normally automatic proxy configuration is recommended, but not possible with PPP-Connect), CAB pretends to connect to the host I chose, but no data is transmitted it seems.

ASH is evidently not able to give any solution for this (they don't even answer my mails).

With STinG it is no way better: Here no www page is loaded, neither with nor without proxy setting...

Is there anybody out there who also has resp. already solved this problem??? Is it a problem of CAB or of the socket?

Any help is appreciated, thanx in advance!

Carsten

P.S.: Fiffi 1.0 is quite buggy, isn't it? It crashes every third action...

I bought an internal hard drive for my Atari 520 ST in 1993. It's 40 meg,
and it has not been used. I never got it working on my machine, so it's been
under my bed ever since. I got rid of my Atari in 1996, and replaced it with
a PC.
The hard drive cost quite a lot back in 93, I paid about 440 U.S $ for it
(including TOS 2,06 upgrade). I have no idea what it's worth today. Would
you be interested in buying it? I have no use for it. Let me know how much
you are prepared to pay for it if you're interested.

I'm not sure, but if it's the same I have it is a patch to remove the ide-
harddisk scan at bootup. MagiC takes a long time to find out that there is
not a internal ide-harddisk. This patch speeds up booting.

The best hd-driver will not solve the problems of freezing the harddisk. What is needed with 'larger' screens on the falcon is a clock patch (hardware scsi patch). Of course a good hd-driver will solve a lot other problems.

Actual hddriver will make the problem worse. There its a very fast driver there will be more timing problems during scsi access.

Try to download the cbhd package somewhere. I believe there is a description in this package of the problem and the clock patch.

Well, I often find myself at an interesting web page using CAB, and
want to disconnect from my ISP to peruse it...(I buy a block of time
so I'm paying for every second of connection).

If I exit CAB, I sometimes can't retrieve the Web page from the cache
(without a big hassle)...All in all it's just simpler for me to have
the dialer as an accessory.

On ftp.toad.net is a softpc file, but it is incomplete, as are ALL
sites that i have found so far. An important folder is missing, called the
insignia file, that has some essential stuff. I intend to post the whole
thing shortly, but i am waiting for OFFICIAL (written) permission from
Insignia to do so. They have given me unofficial permission, but I am
waiting for a letter. They also promised to see if there were any later
versions than the publically available one.

If you do download it from there (or any other place) and find the files
are missing, i will e-mail them to you in a 135k zip file (200k uue'd) on
request.

Hello guys,

I don't know beans about VI-2, but I've had no problems with TrueColor on
my Nemesis/Falcon with my SCSI EZ Drive formatted/partitioned with AHDI.
No clock patch needed here :) Well, Nemesis does come with a buffer card,
maybe that's it...

CU,

Charles

with my ISP via the miniterminal in Iconnect,
checking my diskspace,running UNIX apps,and so on.
But as soon as I leave Iconnect and try to run the
PPP-connect apps the Computer locks up completely,
and I have to reboot.
It's just a mystery.

Hi ... there's an atari program that reads the ROM then dumps it to a
floppy (PC formatted 720Kb) then your ST emulator can use it. Its called
TOSDUMP or something unsurprising like that. This program is distributed
with PACIFIST, TOSBOX and GEMULATOR emulators as far as I can remember.
If you have problems finding it let me know and I'll mail you it ...

Jim.

Hi Harry,

I didn't mess with STinG Internals or Port Setup, but I did
set the Serial CPX to the settings required and saved them. It
worked for me anyway. I thought too that a while back that Peter said
that ZControl was causing some problems, but alas, my memory is
failing, so I could be wrong.

Hi

Does anyone know of a garden planning program for the Atari.
There was something very basic (just a collection of viewing
and drawing utils) available from Goodmans PDL afew years ago.
I wondered if there's something a little more sophisticated around?

If not, has anyone accessed a PC cdrom on the subject (such as an
encyclopedia) with success?

regards, Steve

I guess its not really a problem, something must be mis-configured.

> Bytes/sector 2048 bytes

I think thats the only thing I can adjust.

>
> Each drive is about 31megs, so that's a bit better than your 102meg single.
> I assume you want a single drive because of large midi stuff, so I'm not

Actually midi stuff is really compact. Digital audio is a different story
altogether. But all I want to do is copy my 120meg IDE drive to a (supposedly)
135meg cart.

I think making it compatible with for example Speak Freely would be a
good idea. It's freely available with sources for unix and windows and
uses GSM, ADPCM, LPC and some other coding algorithms. I've had the
idea myself, together with some people I've talked to on IRCnet
#atari. The ADPCM used by SF is really simple, but unfortunetely it
needs a transfer rate of 4K/s. GSM needs less, but is more
complicated.

><< Neil >>

Actually, I posted this again after I saw John's Post that he was
using Lattice C to program NEWSIE. It is possible that the
occasional scramblings people are experiencing is not NEWSIE's fault,
but the fault of the compiler used to make it. John posted that he
was using the standard file input/output routines in Newsie. I'm
suggesting he might want to switch to the Gemdos file routines.

Source record: 104475

Hi to all Atari community.
I've succeded to install MiNT on a 16MB partition of a 20MB HDD,
but there is no space to install compiler here. All I need is
a communication program, like minicom, that able to pass all
8bit of character without conversion. There is a patch to minicom,
doing the job, but I can't compile it - no space for compiler.
Can somebody point me to such a terminal program for MiNT
or just to compile the patched source for me ?
Thank you in advance.

If your auto folder is on a hard drive, find your floppy disk
with your hard drive software on it, boot the machine with the
hard drive turned off, once your on desktop, access that floppy
and turn on your hard drive, run the hard drive program and set
up a C drive icon and then access your auto folder and delete that
program and then just hit reset. I've had to do it a few times with
even my TT/030.

Sounds like you have Magic running in cooperative mode. Magic must run
in preemptive mode for PPP-connect to work.
Check your magx.inf file for the #_TSL line:

#_TSL 2 32

If it's commented out with a semicolon (;), remove the semicolon to
make Magic work in preemtive mode. Alternatively, you can turn
preemtive mode on after bootup with the tslice.cpx.

Sigh! It's bl**dy stupid but Adamas currently needs YET ANOTHER
protocol provided by its own stack/dialer called Draconis. When will
these people learn not to keep re-inventing slightly different wheels!

COPS and ZControl both have problems handling EDIT fields in CPXs under
certain circumstances. ZControl is the worse one in this respect. Only
XControl handles EDIT fields properly. This is all on the differences
between those CPX servers.

> with the SERIAL.CPX?

How do you notice that your port is set to 19200 after bootup ? Is it only
that you do not get 33600 bps connects, or does the CPX actually show
19200 bps as the current setting even though you saved with 38400 bps ?

If it's latter (what I suspect), then try the following : Disable all TSRs
(AUTO programs) and accessories except the CPX server (XControl or COPS),
and all CPXs except SERIAL.CPX. Does it boot up with 38400 bps now ? If not,
set it so and save and reboot and check again :

- If it's 38400 bps now automatically, I suspect it's some program that
meddles with the serial port. Enable all your accessories and TSRs
one by one and reboot and check each time.

- If it's still 19200 bps, then, well, then I ran out of ideas for now.
;-)

4000 people may be a great town where you live, however here (central
Europe) this is a small village ;-). Oliver was talking about townships
with at least 100000 people.

Get the patched uis_iii. Its right there at uni-paderborn in /atari/tools/utils
Rename it to uis_iii.app and put it in the /start/ folder (or whatever folder
you have for auto-starting applications).

> 4th. Is it recommended to use another desktop like Neodesk or the like.

For some unknown reason I can't get Thing 1.20 to run in 256 colors. But for 16
colors or less, Thing works great.

Happy Festivus,
Dave

ZControl? Quite possible I suppose - I've never trusted CPXs to save
settings reliably. A pity, but XControl isn't good enough for me and COPS is
too ugly so I'll stick with my workarounds <g>

Anyone interested in buying the following mags from me?

ST Review Magazines
With Disks (without - 33)
5, 7, 7, 21, 26, 27, 28, 29, 30, 30, 31, 32, 34, 35

ST User
Ranging from Volume 1 issue 1, to the last but one issue October 94.
Around 72 mags in total, including all cover disks where applicable.

I am contemplating selling my full sets of ST Applications, ST Revieww
and ST Formats - dunno yet - but make me a good offer and they will
probably be yours. ;)

Collection from Essex, London or manchester - otherwise a hefty
postage charge.

You HAVE got a CDROM driver installed, have you?? SPIN etc. Magic, by
itself, won't understand them.

>4th. Is it recommended to use another desktop like Neodesk or the like.
>If so what is a recommended one?

Personally I'm quite happy with the desk supplied - small, quick and
simple. I have looked at and experimented with other desks and would
say that Thing v1.20 is worth a look at. The new Jinee from ASH is
very smart, too, but ATM is only on German.

Or you could put the DIALER.APP and DIAL.INF files in your CAB Modules folder. Your DIAL.INF should still point to the same place it does now so it can find the resource file etc. This will have the effect of the dialer appearing in the CAB modules menu, at least with CAB 2.5, so you can run it again without leaving CAB but without it taking up memory while you're online. With MagiC you can use aliases of the two files instead of real copies.

>had hoped.
>

From what I understand, beeing a devoted ST user from back in 1986, it
was not Jack Tramiel who run Atari into the ground, but his son
Sam Tramiel.

Was he, Sam T., not the CEO of the company? Was it not him, Sam T., that
did not know what leg/food to stand on. Switching from the transputer to
the gameconsole, and almost everything in between.

If it had not been for Alvin Stumph, they had not made it big in Europe
either.

Just my opinion !-))
cheers Joergen

6379. Where can I find outburst?

Newsgroup: comp.sys.atari.st
Date: 1998-03-29 00:00:00 UTC
From: kjk@oneimage.com
Message-ID: <351e49c1.0@206.168.123.253>
Source record: 104308

Hello fellow atarians,

Just recently I purchased a hp dj color printer and found that it prints really slow. I read something in the news group about a program that will speed up a inkjet printer and was wondering if it would speed up mine. I believe that the program is called outburst but I am not really sure. If anybody knows about this program or where I can get it I would greatly appreciate it if you could let me know.

Thank you,
Kevin

same way as you get anything off the net..comes as a zip file.. stuff
zipped on an atari can be unzipped on a pc with winzip or whatever

>onto a pc and then run it on the ste? please do not direct

all you need do is format a disk to 720k.. either use the plain old
atari desktop facility to format a disk, or use your pc as it will
support 720k disks

you wont find owt over 720k... if you do it will be split up :)

It certainly is not easy to look for something in the cache but it
is easy to add the page to the hotlist, come offline and pick up the
page again from the hotlist.

I will get rid of pinhead when I get my copy of NVDI.

It doesn't matter where I run UIS III from it still bombs out (4 bombs) by the way the UIS instruction booklet say to run it as the last program in the AUTO file.

And I am having so much fun that I would like to shove a stick of TNT under the darn computer and light it. :)

but thanks for all the help
David

Sure one mustn't send binaries to a NG like this. But yesterday I
almost send the file to this group instead of to Ian.
The message was just about to send when I realised that I make a reply
to c.s.a.st instead of replying by e-mail.
Can it be that Ian has made the same fault as I almost did?

Hi Bertil,

>When I checked magx.inf the #_TSL line wasn't
>even present.Apparently I must have saved magx.inf
>beeing unaware of that I had turned off preemtive mode.

Just a note: Using #_TSL in the magx.inf may cause problems with boot-applications! Some of them use all free memory during their startup and if preemptive multitasking is active at this time, the next starting application may not find any free memory!

Here's a better solution: Deactivate the #_TSL-line again and use the 'Magic Timeslice'-CPX instead. This CPX also activates preemptive multitasking (you have to switch it on in the CPX), but much later, at the end of the booting.

Gruss

I've run across a couple of SC1224's with detachable video cable. I had
two at once, and one cable, so I knew both monitors worked (actually, I've
NEVER seen an SC1224 which didn't work!) I got another cable from Best
Electronics.

.
So eeerm whats happening with the shows guys?... anyone taken any
decisions yet, will there be a show and if so then where ?...

If the original plan is still to have one in early summer then its
getting close..

Is there any news we can have ?.... just hapily enquiering :)

.
Cheers...!ynoT (STOSSER Software)

With CAB 2.5 and above, it's *very* easy to look for something in the cache.

R> Um the ST does have a web browser it has three to be exact CAB being the
R> bes

I'm aware of that. If you'd have read the entire thread you would have known that a new Atari user was asking where to get a browser. Several web pages were given, and then it was asked how he was supposed to get to those web pages if he didn't have a browser.

for sale march 29,1998
one ST HD Adapter made by Supra corp. (c) 1989
has 2 female db-19 connectors
has a 50 pin (scsi) internal connector
and another 26 pin connector

not too sure what this piece is but it will prolly go in a st or a falcon
again i'm not sure ; it's surplus
best offer.

i would prefer if you would reply to sd1904@brunnet.net
that is my most used account for e-mail.
however with all the problems brunnet is having with their "new" newsserver
i am forced to post with my freenet account.
greetings.

I'm using CAB 2.0, I'm not sure if there's a module menu, but I'll
check it out. Seems like a good idea.

6408. Running Players....

Newsgroup: comp.sys.atari.st
Date: 1998-03-29 00:00:00 UTC
From: john.moffat@lion-nathan.co.nz
Message-ID: <6fmkhr$8p$1@nnrp1.dejanews.com>
Source record: 104337

Hi there,

Any Running Players out there made it past Level one yet ???
((
You can stop laughing at me now))

Just the same as the demo version, I can
get the TNT (Objective # 2 completed) get to the hostages and release them
(Objective # 1 completed) but then I can't seem to actually complete the
level???

In the open area where the hostages are being held (North west area
of map. Building that needs red key) I get the full map, but cannot get back
into the rest of the game map to hunt out secret rooms (using the map) and
find the yellow key (and any other stuff I haven't yet seen)

Either no-one
else has bought this game (which is a shame because it's pretty good
considering I've got a standard falcon Mhz wise, AND we need to support more
/|\ software. (Crown of Creation next, then I will have saved money up again
for Willie The Adventurer !! (fingers crossed)
or the people who did buy
Running, have finished it and didn't need to talk about it because they were
such clever fartpants :-(.

ALSO, if you reply, can you please also reply to
my email, as I go through Deja News, and have problems seeing all posts
(?!?!) to groups.
As well sometimes I can't even see if my own posts have
been made or not, so apologies if you have seen this one before !!)

Many
thanks in advance,

John E Cash

Perhaps you have set the modem port active in the "Port Setup" CPX and saved.
If now the "Port Setup" CPX is executed first on boot time, it would switch
the port active and correspondingly prevent SERIAL.CPX from changing the
baud rate to the saved value. So check your "Port Setup" CPX. Alternatively,
rearrange your CPX folder such that SERIAL.CPX runs first.

Cheers Peter

6412. CD Audio Player

Newsgroup: comp.sys.atari.st
Date: 1998-03-29 00:00:00 UTC
From: jlog@zetnet.co.uk
Message-ID: <6fk3ct$s7m$1@irk.zetnet.co.uk>
Source record: 104421

Hi

I have spent the day trying to install a Yamaha CDR400 in a DirecT60. It's there, the light does on and it is recognised by MetaDos using SPIN_SD.BOS and ISO9660F.DOS. A demo version of CDRecorder seems to be able to read a disc in the sense that it can distinguish between a read-only disc and a recordable disc.

I then tried to play an audio disc using CD-Player v1.4 but cannot get the play icon to activate nor a sound out of the headphones. Is there a better driver than SPIN_SD.BOS? I tried CDARGEN.BOS which came with the MetaDos folder but CD-Player said that the driver did not contain/recognise all the necessary audio commands.

Incidently, I had to set the SCSI number to 3 for CDARGEN.BOS but to 11 (=8+3) for SPIN_SD.BOS.

I see that Steffen Engels has a CD player called Mucke on his website but it has a tos extension which Cab does not like and Newsie gave up half way through.

Any advice or pointing in the right direction would be appreciated.

John Logan

6413. [ANN} Untramielled Adventures (CRPG) update

Newsgroup: comp.sys.atari.st
Date: 1998-03-29 00:00:00 UTC
From: Brian O'Donnell <odonnllb@indigo.ie>
Message-ID: <6fk5iv$r1r$1@news.indigo.ie>
Source record: 104422

I've just put on my site
http://indigo.ie/~odonnllb
a new version of 'Anoraks of Doom' and the Hexaid RPG editor.
These are both new and improved. It's difficult to improve on perfection,
but with these I had no difficulty.
Comments (Other than 'Huh?') are welcome.
Regards
Brian O'Donnell
odonnllb@indigo.ie

6414. Re: CAB in Falcon high-color

g>> On the Falcon, I would expect image loading in high-color to be
g>> faster than in 256-colors even with FS-Dithering in both cases, due
g>> to the noticeably less efficient screen management in 256-colors.
o>
o> That would make sense, which also lends itself to my theory that high-
o> color slows down the CPU.

As I've just written to you in Fidonet, in Falcon HiColor the CPU and the
data bus are bogged down in updating the screen, so it doesn't benefit from
not having to do the dithering down.

On a TT with a full 32-bit bus, display of a JPG is quicker by about a third
(53s down to 36s in my wn test).

o> I haven't actually tested that theory, though (my copy of Gem Bench
o> crashes under MagiC, and I'm having problems with TOS).

Gembench works fine here in both modes.

d> It isn't clear, but there's plenty of (C) scattered in the "About"
d> page in the CPX so is probably best left.

In that case the rights are beingretained and it's freeware, not PD. You'd
need to ask for permission before modifying and redistributing it.

Hi Terry, on 27 Mar 98 you wrote: ...respect, brethren
o>
o> Harry Sideras scribbled the following on 26 Mar 98 @ 04:13:50:
o> [DSP]
HS>> I'm sure, but I don't have one on this TT. An example 86k JPG
HS>> (2.15Mb uncompressed) gets dithered to a 256 colour display in 73
HS>> seconds, compared to 34 with 1st Guide. For simple viewing it's
HS>> just easier...
o> They each have different settings, which can effect the performance
o> of both. For instance, Imagecopy will fly in its least-quality
o> setting (i.e. no dithering, no remapping, etc.), and I suspect 1st
o> Guide would, too.

I use both with Adaptive Floyd Steinberg dithering - it's a fair comparison
ISTM.

o> If you set Imagecopy to its best-quality setting, naturally it will
o> be slower, but in my tests, its best setting provided better results
o> than 1st Guide's. That could be because Imagecopy uses more colors,
o> I don't know. (I never tested their timings).

Wrt displaying I don't believe I see a difference between the two - if
there's much in it I'd be surprised. When it comes to printing I'd chose
Imagecopy without looking at anything else. Its printout is superb.

Imagecopy is useful for rather a lot more things, so I'd never be without it,
but for JPG, MPG and PNG viewing it has to be 1st Guide every time.

I think I've got you now. You mean when you click the scroll arrow, rather
than the slider bar? Yes, I get that too, which is why I don't use it. The
trouble is that when you're at the end of the message and click the grey
slider bar it insists on scrolling a full page, even when there's only one
more line left. I wish it would just make the last line the bottom line and
show the final page of text.

I used to do that, but I like having the dialer available from any
application.

It's no big deal really, I usually have an extra accessory slot anyways.

I think your best bet might be Papyrus. It will read First Word Plus files and convert them to RTF. If you have the latest German version it will convert to MS Word directly. There are also some utility programs floating around to convert First Word Plus to RTF. I don't know how good they are.

Source record: 104430
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy,alt.atari-jaguar.discussion

Hi, Peter!

Wrong newsgroup to be talking about the Jaguar,
but the Jag games are still fun to play. Plus,
the joypads are compatible with the STe and Falcon.

And since the joypads have a touch-tone dialer
layout, the Jaguar would make a perfect Home
Internet Appliance for those who don't want to
buy a $1,000.00 computer.

Followups to alt.atari-jaguar.discussion, please.

I disagree with that! That's one of the things I don't like about LED, that sometimes I get lost on the last page, trying to find where I left off. It could be any one of 23 lines that I have to look through. I have the same problem with CAB when it's displaying simple text. I'd much rather fill out the last page with space, so you can easily pick right up where you left off.

Re: "CAB in Falcon high-color", Harry Sideras scribbled the following on 29 Mar 98 @ 04:13:22:

HS> As I've just written to you in Fidonet, in Falcon HiColor the CPU and
HS> the data bus are bogged down in updating the screen, so it doesn't bene
HS> from not having to do the dithering down.

That's what I figured. I suppose a Nemesis board would take care of that.

HS> On a TT with a full 32-bit bus, display of a JPG is quicker by about a
HS> third (53s down to 36s in my wn test).

It's that with a 24-bit card or what?

o>> I haven't actually tested that theory, though (my copy of Gem Bench
o>> crashes under MagiC, and I'm having problems with TOS).
HS>
HS> Gembench works fine here in both modes.

Well, TOS is hardly working at all for me right now (could be bad chip contacts, I don't know yet), and my copy of Gem Bench is rather old (from the Gemini Atari CD-ROM), so that's probably why it doesn't work in MagiC.

Thanks a lot!
You are absolutely right.
When I checked magx.inf the #_TSL line wasn't
even present.Apparently I must have saved magx.inf
beeing unaware of that I had turned off preemtive mode.
Now PPP-connect and the apps works without problem.
Once again,Thanx a lot for the brilliant advice.

There's an example Compuserve script in the ISP_SCR folder in the dialer folder, so you shouldn't have to do much. I presume you just alter the parts that are account specific (annotated in the supplied script: phone number, account and password in the dialer script section at the end) or specific to your machine (ie which serial port you're using). USERNAME will be your account number, FULLNAME = Dennis Bishop, HOSTNAME = compuserve.com (I think).

I don't use Compuserve myself so can't help further than that.

Hi all! This is a litle advertisment foir a new News-package for the Atari Computers.

This package will work with STiK/STinG or GlueSTiK.

FireNews which is now up to V0.75 (The Release Version) is an OFF-Line News package, ie you cannot read and post the news-messages directly.

FireNews consist of 2 programs, Babel which is a small program that fetches and sends the news-messages (it will also do the maintenance). Then we have FireNews itself, which is the reader.

Well all of you that is intrested in this news-package can find it on my home-page http://www.alfaskop.net/~faltrion/ "behind" the FireSTorm Logo

The FireNews part of theis package is email-ware, ie to register it you will have to send me an e-mail to so that I can send you the key back to you.

I'm extremely open to ideas and I wil concider any that I get, but I will most likely NOT make this an ON-Line News-reader.

If anyone of you want to use this program with Mint-Net or any other TCP/IP stack, you are free to do your own "babel" for that stack, but please inform me.

IF you need any help to configure FireNews you are welcome to contact me through e-mail here in comp.sys.atari.st or on irc #atari and I wil do my best to get you started.

SpannerWerksï¿½ ï¿½Jeez, I still have that?!?ï¿½ Auction

Just a little auction to clear out the Atari ST & 8 bit debris in my room.

AUCTION RULES:

1. Standard rules apply. Please mark all bids with the subject line
"Auction" so I can quickly separate them from other emailsï¿½messages so
marked will get first priority!

2. Items will start a Going, Goingx2, Gone phase Friday, April 12th.
At this time, items' status will change after every two-day period without a
raised bid. If an item fails to attract the assigned minimum bid by Sunday
April 5th, it will be pulled from the auction.

3. Minimum raises in bids are in $1 increments.

4. Updates will be posted every tuesday and thursday to both the newsgroup
and the participants. Please let me know if you wish to be taken off the
mailing list for the auction. I will only confirm bids by email for the
highest bidder on each item.

5. Only the highest bid will be listed. On tie bids, the first one
received will be registered as the high bid for that item.

6. No lot bids except for the items already listed as lots.

7. Payment must be made by money order or personal check. If you're
bidding on more than one item you may pay for all your items at once.
However, if after two weeks following confirmation of final total I have not
yet received your payment, the items are forfeit and the next
highest bidder will be contacted.

8. Shipping will be by USPS or UPS, whichever is cheaper for you if you have
no preference. Prices do not include shipping. Prices are un US dollars.
International bids OK.

9. Detail on condition of item available upon request. Let me know if
you have any further questionsï¿½thanks!

The items:

ITEM Min Bid Curr Bid/Bidder

520STm (1 Mb) $10 BP/$15
w/ PS, Mouse &
Astra EasieST
Solderless RAM

Expander (up to 4mb,
512k installed)

It's pretty hard to say, because you don't give the slightest indication
as to where in the world you live.

It sounds to me like a power supply problem, so maybe you could ask any
electronics repair shop to fix the power supply. Otherwise, you could try
getting an old 520ST (for cheap) and cannibalise it's PSU.

Yes, you can use this drive with the ST if you have an ICD compatible
hostadapter like the LINK96/97 and a driver like HDDRIVER that supports
drives larger one GByte connected to the ST.

Sure you can. I have such a drive at home. Ultra-SCSI is compatible to
SCSI/SCSI-2, i. e. you can connect it to the Atari like you can connect
SCSI/SCSI-2 drives. What you can not use are Ultra-WIDE drives.

Eric,

Lotus Word Pro and Word Perfect are still in use by lots of people - however, most of those that I know using Word Perfect should be using Calamus or DA's LayOut instead :). I find it kind of funny that the company I work for has classes for the secretarial types to learn Word Perfect when the bulk of the information being written could just as easily be done using an ASCI text editor/spell checker combo. Then, when that information actually has to be put into a formal document, like a muanual, they wind up trying to use Word Perfect or MicroSolf Word or Word Pro as a page layout program. It really is strange how we go out of our way to make things difficult.

Adobe Photoshop - now here is a wonderfully complex program. It can do just about anything, if you have a couple of years to figure it all out, does most things at a snail's pace, and has the stability of china teacup on the edge of a table during a 6.8 earthquake.

Actually, you shouldn't need much to get online. Basically the info that your provider should give you is:

*Phone number: pretty obvious
*Username
*Password
*DNS Server : an IP number like 129.32.123.23 (just an example). Sometimes there are 2 or more DNS servers in case one is down.
*Mail server: usually, something like mail.compuserve.com or pop.compuserve.com, whatever they tell you.

That's all you need for STiNG. The following ones are required by whatever software you're using.

*SMTP server: usually smtp.compuserve.com
*NNTP server: like news.compuserve.com (for example)

The server names above are examples, probably not the right ones for you. Sometimes providers give IP numbers (like the DNS) instead of names. It's exactly the same for you.

That's about all you need to know. So if you're setting up STiNG, use these parameters in the 'config' section of the Dialer. Only change these parameters. Lots of people get confused about the DIAL.SCR file or such. You absolutely don't need to modify the file, just set your parameters in the STiNG dialer and save.

Nick

Hold on - I thought "Ultra DMA/33" drives were backwards compatible with enhanced IDE. I have never seen any mention of them being SCSI drives.

Well, you'll have to excuse me but I reckon that we don't need so many versions of what is basically an operating system extension. It destroys many options of inter-operability with the available clients.

It's a similar situation to that of printer drivers - many apps. have had to invent their own because no early standard was agreed and now it's the devils own job to find a driver which matches BOTH the printer AND the application.

Call me old-fashioned ..... :-)

Well, you download it with your browser. You then have a .lzh or .zip or
.arc or whatever. Stick it on a 720K floppy disk (DOS formatted). Stick
the disk in your STE and run Lharc, stzip or whatever to uncompress it.
If necessary, use a ramdisk to uncompress a large archive.

I'm pretty sorry you didn't see this in the FAQ. Let me know what you
didn't understand, so I can fix it.

I used to have one of these. They work fine but I believe they will
only handle devices on which Parity is disabled - no big problem,
really.

The DB-19 are DMA IN and DMA OUT.
The 26 pin is another way to get at the SCSI signals.

Rick does not say but if it has a lithium battery on it then it will
be the model with real-time-clock.

do not use it.

> 4th. Is it recommended to use another desktop like Neodesk or the like.
> If so what is a recommended one?

Jinnee is very nice, but it costs additional money.
You can also try THING, which is cheaper (shareware?).

> Ahhh the last question for now. Just how do I change the icons on the
> current desktop. It seems that all I have tried doesn't do a thing. Is
> there and Icon editor for MagiC?

Put your icon rsc files into /gemsys/gemdesk/rsc
You can need any icon editor (INTRFACE e.g.) to edit icons. The use
the standard RSC format.

BTW: You should upgrade to MagiC 5.11 if you can get it. There are some
bugs fixed. Or wait for 6.0 (some weeks, I hope). MagiC 5.20 has only
some minor improvements, compared to 5.1x.

Well, with a little work, you can adapt the 2.5" IDE ribbon to a PC external IDE connector and mount it at the rear of the Falcons case. The easiest way to do this is to find an Amiga 500 2.5" to 3.5 " IDE cable. Visit you local PC shops for the right connector, and have your self an extrenal IDE port. You will also need CD Tools for the IDE CDROM drive and the mint drivers that go along with it. HD Driver can handel the IDE hard disk.

There is a DIP switch which allows to disable DMA sound.
You have to remove the hard disk cover to find an 8-switch red component.
The switch for the sound is the one with the highest number, IIRC.
Maybe this is the cause of the problem?

Cheers.

For the first the 4.3 Gb ultra DMA/33 he's talking about is an IDE drive
not SCSI, and for the second he wants to connect it to his ST which does
not have an IDE-port. Eabe Kuik has right here.

I bought my atari 2nd handed from a technical school, so there's a lot of junk on my HD. For example, there's a MODULA-2 prg loaded into my desk-menu (TSR). Is it save to remove it?

Source record: 104284

As long as we are on the topic, I converted some Papyrus files to RTF (with Papyrus) and tried to load them into Word Professional. Boom, Word bombed, and went back to the desktop. Why? Several files did this, while I have been able to load other RTF files.

Even if this was the place, the IIgs is far inferior to the Amiga (or perhaps that's my anti-Mac sentiment kicking in :)) . I see no way for it to even approach emulation. Only recently have PC's been able to. I remember an emulator that allowed an Amiga to run Mac software, so I suppose it's possible, however unlikely.

6471. Viewing Atari databases

Newsgroup: comp.sys.atari.st
Date: 1998-03-30 00:00:00 UTC
From: kempson@geol.queensu.ca
Message-ID: <6foie2$kn7$1@nnrp1.dejanews.com>
Source record: 104286

I have been giving a number to "atari databases" that I need to view and convert to other formats. The data is Canadian Census infomation that is not easily available from others sources. Are there conversion programs available to view/read/write this data? Can these programs be run on other machines ie. IBM compatables 386/486?

6472. Problems with going from That's Write 1.45 to 4.12

Newsgroup: comp.sys.atari.st
Date: 1998-03-30 00:00:00 UTC
From: cwesterh
Message-ID: <351fc271.3094286@news.utrecht.nl.net>
Source record: 104287

A friend of mine was till not long ago working with That's Write 1.45.
He now has some strange problems. When he wants to load a new layout
(into an old document), the program crashes with two bombs. Also with
some (old) documents the program also crashes with two bombs when it
is loaded. Furthermore the loading of the program takes much longer
then with the old program. He does not have NVDI. It looks like it is
not necessary, but is this true? When he loads a document he gets a
message (or some messages) that the program can not find some (bitmap)
fonts. With the old program, he did not have this. What can he do
about this?
I can not really help him, because I use myself Papyrus.
Greetings,

Cecil.

From your ISP, I would guess you live on the east coast of the USA.
The best place for repairs that I know of is B&C Computervisions in
California. You can find them on the web at <http://www.myatari.com>

6474. ANNOUNCE: Free JPEG software version 6b Atari binaries available

Newsgroup: comp.sys.atari.st
Date: 1998-03-30 00:00:00 UTC
From: Guido Vollbeding <guivol@esc.de>
Message-ID: <351FCE35.AD39006F@esc.de>
Source record: 104289

I have placed at http://www.esc.de/homes/guivol/jpeg-bin/
the following files:

jpg6btos.txt (221 Bytes)
jpg6btos.zip (163528 Bytes)

The zip archive contains generic Pure-C compilations for
all Atari TOS compatible systems (68K code), following
the public IJG source update announcement attached below.

I have also uploaded the files to
ftp://ftp.cs.tu-berlin.de/pub/atari/incoming/,
expecting a final move to /pub/atari/Graphic/.

I would like to provide this ftp pointer for the
Atari section of the JPEG FAQ, when this happens,
because I don't know another actively maintained,
accessable and stable public Atari archive.

You are also invited to spread the code to other
appropriate locations and update older versions,
if possible.

You may also grab the source and compile the code
yourself. Please let me know of any problems when
doing this, since I have taken over the provided
Atari port.

Note that besides providing some new features,
stability of the code has also increased, so I
would recommend to update your software anyway.

Regards,
Guido

Subject: ANNOUNCE: Free JPEG software version 6b released
Date: Sun, 29 Mar 1998 18:44:18 GMT
From: Tom Lane <tgl@netcom.com>
Reply-To: jpeg-info@uunet.uu.net
Organization: Independent JPEG Group
Newsgroups: comp.compression, comp.graphics.misc,
comp.infosystems.www.authoring.images, alt.graphics.pixutils
Followup-To: comp.compression

The Independent JPEG Group is pleased to announce a new public release
of our free JPEG image compression software.

The primary user-visible improvement in this new release is that the "jpegtran" sample program is now able to perform lossless rotation and flipping of JPEG images. Although there are some restrictions on the dimensions of images that can be transformed cleanly, this facility may be of considerable use to digital camera users. (My thanks to Guido Vollbeding for doing most of the work to provide this feature.)

In the two years since our last public release, we've accumulated quite a number of small improvements in functionality, robustness, and portability. For example, the code should now build out-of-the-box under Microsoft Visual C++ on Windows and under Metrowerks CodeWarrior on Apple Macintosh. There is also support for building libjpeg as a shared library on many flavors of Unix. Although individually these improvements are minor, there are enough to justify a new public release.

To avoid the Unisys LZW patent, djpeg's GIF output capability has been changed to produce "uncompressed GIFs", and cjpeg's GIF input capability has been removed altogether. We're not happy about it either, but there seems to be no good alternative if the code is to be freely distributed.

The IJG C source code, documentation, and test files are available by anonymous FTP from ftp://ftp.uu.net/graphics/jpeg/jpegsrc.v6b.tar.gz. The same code will shortly be available in a more DOS-friendly format (ie, ZIP) in the SimTel archives, ftp://ftp.simtel.net/pub/simtelnet/msdos/graphics/jpegsr6b.zip.

The IJG code includes a reusable JPEG compression/decompression library, plus sample applications "cjpeg" and "djpeg", which perform conversion between JPEG JFIF format and image files in PPM/PGM (PBMPLUS), BMP, Utah RLE, and Targa formats. A third application "jpegtran" provides lossless transcoding between different JPEG formats --- for example, it can convert a baseline JPEG file to an equivalent progressive JPEG file. Two small applications "wrjpgcom" and "rdjpgcom" insert and extract textual comments in JFIF files. The package is highly portable; it has been used successfully on many machines ranging from Apple IIs to Crays.

We are releasing this software for both noncommercial and commercial use. Companies are welcome to use it as the basis for JPEG-related products. We do not ask a royalty, although we do ask for an acknowledgement in product literature (see the README file in the distribution for details). We hope to make this software industrial-quality --- although, as with anything that's free, we offer no warranty and accept no liability.

Please direct any questions about this software to jpeg-info@uunet.uu.net.

Dr. Thomas G. Lane
organizer, Independent JPEG Group

Modula-2 Is a fairly basic programming lagnuage similar to Pascal. It is
mainly use for learning purposes...

Dunno what the Modula-2 accessory in the Desk menu is for but to remove it
just delete the modula2.acc (or whatever it is called) from your boot disks
root directory...

Hey! hall@post1.com (Hallvard Tangeraas) wasn't it 30 Mar 1998
17:59:29 +0200 that you wrote:

>>>onto a pc and then run it on the ste? please do not direct
>>
>>all you need do is format a disk to 720k.. either use the plain old

>No, formatting disks using the Atari desktop formatter doesn't make them
>completely MSDOS compatible -at least that's my experience!

hmm over the last few years I have gone from a sx25, dx80, dx4x100 and
now a p166 with win 95... I have always needed to copy data backwards
and forwards and usualy use the atari desktop.... I use a tos 1.62 ste
and every disk i formatted (must be a lot over the years) has always
worked ok between the computers..

However it could be differences in TOS..maybe I got a real good one:)

>Better use the second method and format the disk on the PC (be sure to use

again yes...they both work so why not :).. and the pc formatter is
faster.. however..(I know the poster asked about pc to st) if your
going to be passing data from the atari to the pc..then most definatly
format it on the atari and write protect before inserting into the
pc..the pc tends to write some funny things to the disk..

hi all
amongst a lot of atari stuff i have a stacy 2 and have a couple of
questions if anyone can help please

i can't get it to go faster than 4800 with a modem i have tried both
tos 1.4 fixes +hs modem

i would like to increase the memory to 4 meg there are two 30 pin sip
sockets in a trap door underneath,idealy i would like to get 2 x 1 meg
sips i know there are sip to simm adaptors but am unsure if this
combination will fit

i am willing to do a bit of soldering if needed

finaly is swoping the internal 20 meg {ha} hd a straitforward job ?

You mean it's an ACC written in Modula-2?

Or an ACC which is part of an M-2 system?

If the first I'm sure you can delete it (or, better, just rename it
ACD and see if anything breaks).

If the second you have probably got the TDL Modula-2 system there
somewhere. This used an ACC to pre-set the environment for the
compiler system. If you fancy doing any programming don't delete it.

Have you got a boot manager installed (like Superboot, X-Boot)? This
would allow you to configure ACCs AUTOs etc. at boot up so you just
loaded what you needed.

Hi folks ...

Can anyone tell me about the following version of Cubase? I quote from
the box:

'Cubase ST audio, Yamaha CBX-D5 version'

Yep it says 'ST audio'!

Presumably the CBX thingie does the audio. Any details would be
appreciated.

Jim.

nope, sorry not running on Linux, and not ported to GEM,
ported to MiNT.
TAF's 7 disk MiNTnet/internet set of ohh ages ago
included Chimera
Lynx runs on damn near anything doesn't it?

I'm referring to lynx for MiNT/MiNTnet, which can run in a window using TOSWIN or similar. This is available from Umich, though I think a later version is available from Scott Bigham's page - he's the GlueSTiK author.

The port of Chimera I refer to is in ye olde TAF distribution which was the first graphical Atari browser kit (Methuselah mode ON). This installed MiNT, MiNTnet and the MiNT port of X11r5, plus Chimera (which needs X to work). I *think* you could get it from Hensa which would mean it's either available from the CyberSTrider site or will be soon when Danny has sorted it out.

> Now PPP-connect and the apps works without problem.

Just one hint:
You should switch on preemtive multitasking with the time slice CPX
(using XControl or COPS or any other control panel for CPX modules)
and not with the #_TSL line in MAGX.INF.

If you insert a #_TSL line in MAGX.INF the preemtive multitasking
is active while starting AUTO folder applications and ACCs. When
using the time slice CPX, preemtive multitasking is switched on
later after processing the AUTO folder.

The problem with preemtive multitasking in the AUTO folder is
that many programs could be started (nearly) at the same time.
But in TOS an applications gets the whole available memory at
startup and has to release the part of the memory which is not
needed itself. If another programm starts before the first has
released the unneeded memory, there's nothing left, so it can't
start. This is only a problem for applications in the AUTO folder
because the system will launch them as fast as possible.

> the CAB.OVL docs ? Setting the proxy servers *in* CAB does not work.

Of course I used the proxy settings in the DIAL.SCR file. I even named the proxy servers by their IP.

Evidently it has to do with the ISP because other people with other ISPs seem to have nor problems. But simply I cannot figure out what it can be, the responsible person at my university's provider has got no idea yet (and will never get I suppose).

FTPing, Telneting and other clients work OK (probably 'cause they don't use proxies ;-), but CAB does not.

If there are other users with the same problem (not to get connected with CAB using proxies):~

MAIL ME !!!

I'll bundle the mail addresses and take them to Application Systems at the Neuss fair next weekend. The more they are the better will be the possibility that someone at ASH looks for a solution.

Greetings,
Carsten

> << Neil >>

Hi Neil!

Little Correction: The presence and version number of NVDI is not
important to display CAB's color icons.
It only depends from the version number of MagiC which must be at
least 3.0.

Excuse me, it was a "quick-and-dirty" answer of mine, without my CAB
manual at hand...

Do you really think the kids would be any better if everybody on the news
refrained from using swearwords ? That's an illusion. They hear those words
a dozen times in every movie they watch on TV or in the cinema, they hear
it from people on the streets, from their fellow pupils etc. etc.

It's like the discussion around guns. Tragedies like Arkansaw happen because
movies teach that violence is a means to solve problems, because the kid's
parents tell them about the same, because guns are freely available every-
where in the US. Banning guns from schools is a weak attempt to solve the
problem, and so is banning swearwords from Usenet a weak attempt to improve
the children's language.

And auctions are precisely that are not appropriate in c.s.a.s.

> >This newsgroup is *NOT* an auction barn.
> >

Good. So please accept the consequence of it.

> but considering there is no comp.sys.atari.st.marketplace or
> equivalent, and there are numerous FS: postings, this is the only viable
> location.

You'll notice if you check those FS: postings that they are posted only once, and repeated not more often than once or twice, and this with a week at least between the postings. Nothing that even remotely resembles an auction.

> It's not like its an MLM or porn.

Given the fact that you posted your true e-mail address, you wouldn't be able to use it anymore if it had been porn, I guess ;-).

Cheers Peter

I'm not sure we are talking about the same kind of Hard Drive here. In the US drives that are advertised as UDMA (Ultra DMA) are listed as being backwards compatible with E-IDE, so I don't think Ultra SCSI is what the person saw advertised.

I believe that the newsgroup rules are in Peter's favor. The appropriate thing to do is to list the URL where you are auctioning your items (such as ebay.com or onsale.com and let the newsgroup subscribers follow the auction at the auction site, not on the newsgroup. The newsgroup should only serve to notify subscribers of the existence of the auction, not conduct the auction. Occassional For Sale posts are acceptable also.

Hi Terry, on 24 Mar 98 you wrote: ...respect, brethren

o>
o> Charles Silver scribbled the following on 24 Mar 98
c>> Cool, except if you use JPEGD, then you can't see any progressive
c>> JPEG's ;(---
o> AFAIK, Imagecopy doesn't yet support progressive JPEGs, with or
o> without using JPEGD. However, you can convert them to non-
o> progressive JPEGs without any loss in quality, using Tommy Andersen's
o> JPEGTRAN.TTP program.

I'm a bit behind with a lot of things, but while catching up I discovered:

Imagecopy is still being worked on and there is now a _public_ beta available
from the FaST Club Web pages - see below for details. Of course, some bugs
and new features have already been added since this update, but the saving
and loading of Progressive JPGs is already contained within this beta versi

Just to emphasise, you *must* have an original _unmodified_ version of
Imagecopy v4.1 *CD* or the update simply won't work. Always use an external
INF file when saving preferences to preserve the original executable.

==========
stapplications/imagecopy #987, from stclub, 144 chars, Feb 16 22:50 98

IC42B1.ZIP

Update files for public beta versions are now also available on the Imagecopy
web page. Follow the links from www.cix.co.uk/~sta/

==========
stapplications/imagecopy #977, from j_hughes, 2665 chars, Feb 2 22:28 98

TITLE: Imagecopy 4.2b1 Plus
==========

This is the first public beta version of Imagecopy 4.2. There will be a
number of future beta versions, with additional new features, before
Imagecopy 4.2 is released. Public beta versions are freely available to
any registered user of Imagecopy 4.1 CD.

Imagecopy PhotoCD has been renamed as 'Imagecopy Plus', and contains
additional options (beside the ability to read PhotoCD images) which
will not be available in the standard version. The file name has
changed from:

IMGC4CD.PRG to IC4PLUS.PRG

Updating Imagecopy 4.1 CD to 4.2b1 Plus

To upgrade from Imagecopy 4.1 CD to 4.2b1 Plus you need to download IC42B1.ZIP (83888 bytes). You will also need to have a copy of Update (UPDATE.PRG) to install the update. If you don't have this already you can download UPDAT105.ZIP (19757 bytes).

New features
---
1. Imagecopy uses separate modules for JPEG and PhotoCD images. This reduces the size of the main program by nearly 100k, and the modules can be loaded and unloaded as they are needed. If you prefer to keep the modules permanently in memory, there is an option for doing this (Options:Preferences:Modules) - in this case the modules will be loaded at startup and kept in memory. However, unless you are running Imagecopy from a floppy disk and have plenty of memory, it is better to have the modules loaded and unloaded as needed. Modules which are loaded
as needed are cached in memory until Imagecopy needs to free their memory for other purposes. You can also force them to be unloaded (to free up memory for other applications) by using the 'Free Caches' option
(Options:Misc:Free Caches). If you use Imagecopy as an accessory, modules and other caches are automatically freed when the accessory is closed.

Modules should be placed in the same directory as Imagecopy or in a program directory which is selected from the Paths dialog (Options: Preferences:Paths). Having the modules in the program directory ensures that Imagecopy will be able to find them wherever it is started from. The program directory is where Imagecopy looks for program resources (fonts, palettes, modules, INF files etc.) - it doesn't have to contain the actual program file (although it may do so).

2. Imagecopy can read Photoshop images (apart from CMYK images and images with unflattened layers) [Imagecopy Plus].

3. Imagecopy can read STAD images [Imagecopy Plus].

4. Imagecopy can read and write progressive JPEGs. Progressive JPEGs can be identified in the image information dialog, where they are listed as 'JPEG (progressive)'. You can convert images to progressive JPEGs by selecting the progressive checkbox in the Convert dialog. You can also save an image as a progressive JPEG by displaying it on screen and selecting 'JPEG' and 'progressive' in the Edit/Change Format option of the image menu before resaving the image.

[Imagecopy may create temporary files when reading or writing progressive JPEGs if there is limited memory. These are normally created in the current directory.]

5. The Convert dialog also has an interlaced checkbox for GIFs. This duplicates the 'Interlace GIF images' checkbox in the Image Preferences

dialog.

6. The Image Preferences dialog has a pop-up menu which allows you to select 'Best quality, 'Fast', or 'DSP' for JPEG decoding. This replaces the 'External JFIF loader' option which used to be in the System Preferences dialog.

7. When the full area of the top window on screen is selected for copying (see 10.2 in the manual supplement), Imagecopy includes the window's drop shadow.

8. Images can be dragged from catalogue windows (under MagiC etc.) when Imagecopy is not the top application.

Bug fixes
----
1. Pressing [Tab] to cycle images in full-screen mode no longer cycles backwards.

2. Holding down [Shift] while selecting Copy Image from the Copy menu doesn't lock the mouse after the image has been copied. See 4.3.2a.1 on using the [Shift] key to hide Imagecopy's menu window while copying images. NB You can also top other windows or switch applications while the [Shift] is is held down (this is useful if you want to copy a window belonging to another application).

3. Imagecopy can read TIFF images with alpha channels (the alpha data is ignored). Alpha channels contain transparency information.

4. Imagecopy recognizes Intel-format TIFFs with incorrect file extensions (previously it only recognized Motorola-format TIFFs).

5. Fixed a file-reading problem which could cause problems with large images.

6. The Greyscale convert option (Colour Type: Greyscale in the Convert dialog) now works correctly (this was broken in 4.1).

Yes, you will need a Yamaha CBX-D5 and a Steinberg ACSI to SCSI box in order for it to work with an ST. The CBX-D5 does 4 tracks of audio and its a nice box.

Regards,

Rich

Well, you'd have to know what program was originally used, as "atari
database" is a bit vague.

Then you talk about programs. The program might run on a PC with an ST
emulator. Check out the Quick FAQ for emulation pointers.

Cheers,
Nick

6512. ** Problem with Super Mario **

Newsgroup: comp.sys.atari.st
Date: 1998-03-31 00:00:00 UTC
From: garn9114@kutztown.edu
Message-ID: <6fro6j$3jm$1@jake.esu.edu>
Source record: 104140

Hey kiddies! I have a problem that I was hoping someone might be able
to guide me to. This serious error has only happened on a few occasions.
First, whenever I try to install gcc and g++, and most recently playing the
new Super Mario Brothers NES Emulator v1.1 from Reservoir Gods. On the
most recent occasion, I left the game normally, and my computer locked up.
I thought it rather odd. When I rebooted, I found that drives G and H
(partitions on my internal 84Meg HD) were shifted downto E and F, and the
original content of drives E and F were gone. Drives C and D were all
okay. Again, the only other time this has happened is whenever I try to
install gcc and g++.

Well, needless to say I'm confused. If anybody has any ideas what
the problem could be, or if there's anything I might be able to do to solve
it, please either leave a message here (if you think others should see) or
email me at garn9114@kutztown (this being preferable considering the few
times I'm able to read this great newsgroup). Thanks in advance for anyone
who might be able to shed some light on the problem. In the meantime, time
to reinstall everything!

Thanks again in advance,
George Garner

P.S.> FYI, I have an Atari Falcon030 with 4 Megs of Ram running Tos 4.04,
Sting 1.12, Speedo GDOS, and a few other useless auto programs that I
didn't run the first times it happened to me with gcc so they can't be a
problem...

Re: "PNG", guivol@esc.de scribbled the following on 31 Mar 98 @ 21:42:10:

g> It's more powerful than GIF (see the given PNG homepage),
g> except that it doesn't support the (poor anyway) multi-image/
g> animation mode of GIF. The PNG group considers this as no
g> disadvantage, though, since multi-image/animation support
g> is subject to a dedicated format (MNG).
g>
g> PNG complements JPEG for lossless and artwork applications.
g> The exercise is to choose the right format for your purpose.

Thanks for the info.

It sounds as if PNG has some potential, but it needs to be more accepted (particularly on the Internet) before we can come close to dismissing the GIF format.

From what I can remember of the citys in Germany, they are way
bigger, heck, most of the small towns in Germany are bigger than
Rosamond. The ONE computer shop in town is only open like 3
days of the week. But I enjoy the wide open spaces around here,
something you can't find over there. I can look out the front
door of my trailer and see for at lest 30 miles before any hills
can be seen.

Dennis Bishop (102063.112@CompuServe.COM) wrote:
: There we go again. Go to a Web page, with Flash 1.6? NOT!

Sure. Here's one example of how -- note that it assumes certain things about how you are using Flash to connect to the internet, i.e. what services your Internet Service Provider has to offer.

If you are using Flash to connect to a Unix host, type "lynx" at the Unix prompt, then press your "g" key. Then type the URL you want to go to. Shortly, the text of the web page in question will appear on your screen. Use your arrow keys to move the cursor from link to link. Pressing your space bar when your cursor is over a link will take you to the page that link links to. If the link links to a file, the program (lynx) will offer you the option of downloading the linked to file. Accept that option. Use "q" to exit lynx. Now use "sz" to send the file you downloaded to your server's machine to send the file on to your local machine using z-modem. You'll have to type "sz" followed by the name of the file. If you forgot the file name, you can use "ls" to list the files in your directory to the screen. After you have sent the file to your home machine, you probably will want to remove it from your service provider's machine using "rm" followed by the file name.

The above is just one of many ways of getting a file, or visiting a web site, with just a dialup connection such as what Flash provides. If it doesn't work for you, you may have to explore other options, many of which have been posted to this thread already, such as using the services that will e-mail files to you.

Obviously, things _will_ get easier once you have a tcp/ip connection and
can run graphical web browsers and ftp programs and etc... on your home
machine, which is the point we are trying to get you up to.

One other thing I forgot to mention long ago is probably the most
important resource available to you: your local user group.

Now I know, given your geographic location, tha the term "local" has top
be somewhat loosely applied here. But as president of a user group in
Northern California, I know our club does its best to help its members
wherever in the world they may be, as is evidenced by the geographic
spread of our membership.

If Los Angeles is only 80 miles from you, there are probably Atari user
groups within that radius. Give one of them a call.

Well, I never actually saw the thingy running, but it IS a version of Cubase Audio for the ST and Yamaha CBX-D5. The CBX-D5 was an early I/O box that was actually a SCSI device, handling all the audio chores. It included 2 inputs and 4 outputs (all balanced) and had a Yamaha SPX 1000 processor (or 2) built in. I know there are people who are still using this device with Cubase on other platforms, but I don't think I ever heard of any one actually running Cubase ST on it.. most people who wanted audio with Cubase on the Atari platform bought a Falcon (like me). I considered the CBX-D5, but it was $2500 or something like that when it first came out.. the Falcon gave me more tracks out of the box. I know Yamaha came out with a new chip that allowed the device to be Win95 compatible within the last year or so.. I don't know how that affects the Atari version.

Also, I have seen a CBX version on Steinberg's web site for the ST.. so it has been updated, but probably not in several years. That's all I know!

Re: "Losing memory in CAB", guy@swampdog.demon.co.uk scribbled the following
on 01 Apr 98 @ 00:07:46:

g> I wasn't clear.

Actually, you were. Maybe my reply wasn't clear.

g> When you set the memory in Cab there are two ways it can be
g> implemented (I have no idea which is). Either Cab grabs one block of
g> the designated size and hangs onto it, or it can grab lots of blocks
g> of indeterminate size until the designated total is reached. The
g> former "wastes" memory in that it may never get used. The latter
g> fragments it.

Well, there's no question it uses the latter method. I'm saying it should
use the former, because I don't believe in the wasted memory argument, for
reasons already given. Furthermore, even when that designated total is
reached, it's not like CAB hangs onto it when it purges old graphics for new
graphics. In fact, your cache shrinks and shrinks and shrinks, but not to
give the rest of the system back that memory. It's simply lost (in effect)
until you quit CAB. So what's the point?

g> It doesn't know that it isn't competing though. ;-)

It shouldn't have to know. That's why it has the two memory settings, so *I*
can decide whether or not that memory is valuable.

g> Nope - only if you happen to regularly use a program with Cab that
g> won't otherwise load!

That's what the "Keep free" setting is for. In fact, the current method
makes it MORE likely that you won't have memory available for the "regularly
used" program.

For instance, I have the "Keep free" setting at 1024 bytes. But there are
times where memory gets so fragmented, that I find myself with far less than
that available. I have about 8 megs free when first loading CAB. The other
night after surfing for a few hours, I had about 640k free, but only 480k was
taken up by my cache. That means about 7 megs of memory was "wasted." This
is preferable to grabbing a block of USER-DEFINED memory and keeping it?

g> Agreed. Question is, do you tie up the whole lot all the time or
g> not?

If you give CAB permission to use it, YES. What's the point of even having
the cache settings if they're irrelevant?

Actually I zapped MagiC from the hard drive and got out Geneva. Didn't have a problem setting it up. Worked with everything in the auto folder that MagiC didn't work with. Even has a hell of alot better manual with it. I can get Geneva to run a couple of programs together that Magic didn't seem to want to do. Maybe this is a limitation of MagiC version 4.0 though. With an alternate desktop like neodesk I really like Geneva alot better that I did MagiC. It also seems to me that Geneva runs alot faster than MagiC did on my Mega STe. All in all I think that I am just going to use Geneva for the time being. I still haven't read through the enire manual for Geneva yet. But so far I like the ease of installation and the way the manual is set up. Perhaps some of the programmers should take a lesson from this program on writting a program that is easy to install and with a good PRINTED manual. Not just this HYP text bull or something passed off in German. No offense to anyone, but if you are going to make programs available through the internet of to other countries they should includ docs that are in the launage of the countries that they are going to be used. I don't know about you but if I am going to spend good money for a program I want it on disk and a well printed manual with it. I am more than willing to pay for something good. Well so much for my 0.02 cents worth.

No, it makes a lot of sense. So I guess you'll like the news that Jens
Heitmann (Adamas and Draconis author) and I just made an appointment to
discuss (and hopefully work on) some "compatibility layer" which would
allow his clients to run under STinG.

It was no attempt at humour, I was quite serious. I know the situation of being short of money, and I know if that is the case it's not relevant for anyone except me. So here, in your case, the same applies. So whether you need money or not, I don't care; but I won't like being flooded with bids or your replies, regardless if the reason is your need of money or anything else.

> Like Wild & Wacky Auction?
> Like Dan Mazurowski's Auction?

I cannot remember any auction by any of those people. If they existed, they must have been several years ago, or somehow they did not get to my place (rather unlikely). To make sure that I did not just ignore them, I searched my news server's database of comp.sys.atari.st (several thousands articles) for the words "Monter", "Wacky" and "Mazurowski". No articles by the former two. I found quite a few by Dan Mazurowski, but they are normal contributions to discussions, not auctions.

If you've referring to "auctions" like the one by YAC (Eric Hays), you should note that he merely posted the announcement and the list of items exactly once, and only one followup annoucing the final update. You cannot really call that an auction carried by c.s.a.s.

So I repeat: There have *not* been auctions (at least for a long time) on comp.sys.atari.st. c.s.a.s. is not meant to carry auctions, and I'm sure a significant number of people dislike them there. I guess most people just resigned from protesting against (like protesting against SPAM), they

just quietly think "What a jerk" or similar.

> In the last two hours I have gone through the c.s.a.st faqs (new and quick),
> and through dejanews and found no mention of c.s.a.st being a moderated ng, or
> of you being appointed to moderate it. If you can provide documentation of
> this authority or point me in the direction of a charter for the ng that would
> justify your demands, I will gladly back down and refrain from posting further
> auctions to c.s.a.st.

If c.s.a.s were moderated you had not succeeded in the first place to send your stuff. c.s.a.s is not moderated, but that does not mean people may do what they think is best for them, they still have to adhere to some set of rules. One of those is "Post only what is appropriate, and do not cause more traffic than needed to make your point." Posting basically the same message every day violates the second, while strictly speaking, the first announcement violates the first part. Concerning the latter, it's true there is no real marketplace group, so a single "FS:" is probably justified.

As c.s.a.s. is not moderated, I'm not the moderator. Responsibility for the shape of a non-moderated newgroup is with the people using it. I'm one of them. Earlier on, Rich Tietjens did a good job in this, but his appearance here has become rare.

> I eagerly await your response. Until then, according to all information I
> have available I am not in error.

I've said above that you're not exactly in error. Just consider the case of a dozen or more people doing the same. c.s.a.s. would be flooded with auction bids and announcements and would become useless. Same happened with too many media that have been corrupted by commercials. It's *our* responsibility to ensure that this does not happen with our newsgroups.

IMHO the way the YAC auction was done is the better way by far. Announce it in c.s.a.s. once, maybe one followup when it comes to final bids, but do everything else in private mailing lists. After all, news servers keep articles for quite a while, so people that do not read news very often won't miss the announcement anyway.

Cheers Peter

6535. NEW Exciting Music Releases from Floppyshop

Newsgroup: comp.sys.atari.st
Date: 1998-03-31 00:00:00 UTC
From: Steve Delaney <sdelaney@zetnet.co.uk>
Message-ID: <6fu734ggj1@irk.zetnet.co.uk>
Source record: 104163

```
**********************************************************************
PRESS RELEASE
FLOPPYSHOP
1st April 1998
ABERDEEN, SCOTLAND
**********************************************************************
ELECTRONIC COW releases from FLOPPYSHOP
**********************************************************************
```

Floppyshop are pleased to announce the release of two exciting new releases from Atari music developers Electronic Cow. The first, Scribble Synth, comes about as a result of the popularity of Snippit Synth, their granular synthesiser, and is a further adaptation on that theme. The sounds produced are entirely different from Snippit but should appeal to those who are already enjoying that release.

EC-909 is a major breakthrough on the Atari, giving us a professional quality analogue based drum machine in software (probably the only music product with which PC and Mac owners had a definite advantage over us).

It comes complete with 16 samples from the legendary TR-909 and compares favourably with similar software on the Mac and PC costs upwards of 100 pounds!

Here's some more information on both products.

```
**********************************************************************
Scribble Synth by Electronic Cow
```

Program Type:- Software Based Sample Sequencer
System: ST(FM), STE, Falcon and TT.
Memory Required: 1 Mb
Display Type: Mono monitor on an ST. Any display type on TT or Falcon.
Price: 16 pounds
Postage: UK 2pounds, Europe (including Eire) 3 pounds, ROW 4 pounds

```
**********************************************************************
PRODUCT INFORMATION
**********************************************************************
```

Scribble Synth is another software based sound synthesizer, in the same vein as Electronic Cow's previous release Snippit Synth. However, the synthesis model used in Scribble Synth is completely different: it's a true additive synthesizer, but with a difference! You actually draw in frequency envelopes with the mouse!

How it works:

These mouse 'scribbles' (of which there can be up to five per sound) are transformed into 2D frequency spectrum plots by the software automatically. Both low and high frequency bandwidths can be defined, and up to twenty bands
can be comprised in one 'scribble'. These plots are then placed in the time domain and Scribble Synth interpolates individual envelope shapes for each frequency band!

The results are quite amazing! Strange sci-fi warbles, time-based pitch and filtering effects, plus frequency modulated sounds are all possible with Scribble Synth, as well as some REALLY deep bass sounds! Sounds can then be exported to tracker programs, direct-to-disk sequencers/recorders, and sample editors in either AIFF, AVR or SPL formats. Both eight and 16-bit formats are supported and ANY frequency between 8 and 50KHz! Scribble Synth will also allow you to dump the sounds via MIDI to an MSDS-comaptible sampler, or the Akai S900/950...

Scribble Synth's main features include:

* AVR/AIFF/SPL 8/16 bit sample export at any frequency (up to 50KHz)

* Digital audio playback of sounds on the Falcon and STE/TT

* MIDI sample dump for Akai S900/S950 and all sample dump standard samplers

* On-line help utilising ST-Guide, plus an eight-page CD-booklet manual

Scribble Synth requires at least one megabyte of memory and a 640 x 400 display to run. Because of hardware limitations, no audio playback is available on the STFM, but you can still generate samples!

****
EC-909 by Electronic Cow

Program Type:- Software Based Analogue Drum Machine
System: STE, Falcon and TT.
Memory Required: 1 Mb (STE), 4 Mb Falcon
Display Type: Mono monitor on an ST. Any display type on TT or Falcon.
Price: 25 pounds
Postage: UK 2 pounds, Europe (including Eire) 3 pounds, ROW 4 pounds
****
PRODUCT INFORMATION
****

Tired of the ridiculous prices for second-hand analogue drum machines? Wish you had Re-Birth on the Atari?

EC-909 is an analogue drum machine emulator for the Atari STE/TT or Falcon. It features sixteen original TR-909 sounds (including bass, snare, toms, rim, clap, and cymbals), with various controls (pitch tuning, volume attenuation, and attack shape) and an interface everyone will have seen somewhere before!

EC-909 can create single bar patterns (in real-time on the Falcon), and then export them into your direct-to-disk recorder or sample editor as AIFF or

AVR format samples. Both 8 and 16-bit formats are supported, as well as mono or stereo options. The program will also allow you to export the pattern as a standard MIDI file for loading into your MIDI sequencer. Other features include: MIDI triggering, tempo and bar length controls, and Undo!

EC-909' s main features include:

* AVR/AIFF 8/16 bit sample export, either mono or stereo

* 16 unique TR909 style drum sounds

* Tempo and bar length controls

* MIDI triggering for drums and pattern playing

* Exports patterns as type 1 MIDI files

* On-line help utilising ST-Guide, plus an eight-page CD-booklet manual

There are two versions of EC-909; one for the STE and TT, and one for the Falcon. EC-909 requires at least one megabyte of memory (4 Mbytes on the Falcon) and a 640 x 400 display. EC-909 won't run on the STFM because of the lack of digital audio hardware

PRESS RELEASE
FLOPPYSHOP
1st April 1998
ABERDEEN, SCOTLAND
****

SELECT CD FOR FALCON OWNERS
****

Floppyshop are pleased to announce the release of their fourth CD-ROM title for Atari computers. It is an updated version of an excellent release originally titled Falcon 030 Version 1.00, which was compiled by Michel Goux and Thierry Benet who run the popular Azimut RTC bulletin board in France. The CD-ROM remains essentially their compilation, but we have modified it by altering the folder structure to English names and replacing some of the included software packages with newer updated versions. In addition, we have squeezed quite a lot of interesting extras onto the CD which were not present on the original release. The Floppyshop variant is called SELECT CD, so as to avoid confusion with the French version.

As the name suggests, this collection is exclusively dedicated to the Atari (or CLAB) Falcon 030. There's no antiquated ST software padding out this collection, it's all top quality PD, Shareware and Freeware for Falcon computers. Many of the titles coincidentally happen to run exceptionally well on the Hades, Medusa and other high end clones, but others use the DSP and are therefore only comfortable with the real McCoy.

SELECT CD includes all the top demos from Europe's favourite demo crews, lots of audio programs, masses of games, graphic programs, file viewers, lots
of source code (in Assembler, C, DSP, GFA and other languages), several multimedia packages, a number of STe emulators, some direct to disk recording software, lots of disk magazines, masses of small utilities, technical info, DIY electronics projects and an easy to install Unix environment for your Falcon.

With very few exceptions, almost everything on the CD-ROM is uncompressed and ready to run. In fact most software will run directly from the CD, thus avoiding the necessity to purchase a larger hard drive. Falcon exclusive collections are very few and far between, with most Falcon owners having to be content with a token "corner" on an ST based title. SELECT CD offers a unique opportunity to own all those classic Falcon demos together with the very latest versions of all today's popular PD, Shareware and Freeware titles from the world's top Falcon programmers. What more could you possibly

want, apart from a Phenix or a Milan?

SELECT CD is available now for only 15 pounds + P&P (UK 2 pounds, Europe 3 pounds, ROW 4 pounds).

****

6537. Special Deals on Atari P Packages

Newsgroup: comp.sys.atari.st
Date: 1998-03-31 00:00:00 UTC
From: Steve Delaney <sdelaney@zetnet.co.uk>
Message-ID: <6fu73nggj3@irk.zetnet.co.uk>
Source record: 104165

```
**********************************************************************
PRESS RELEASE
FLOPPYSHOP
1st April 1998 ABERDEEN,
SCOTLAND
**********************************************************************
FLOPPYSHOP TAKES OVER zzSOFT'S DESKTOP PUBLISHING PACKAGES
!!!NEW DEALS ON EASY TEXT PRO VECTOR!!!
**********************************************************************
```

Floppyshop are pleased to announce the recent acquisition of worldwide production and distribution rights to zzSoft's Easy Text Professional and Easy Text Pro Vector Desktop Publishing packages. Both packages will continue to be priced at 19.95 + P&P (which will remain free for UK customers), which is less than you would expect to pay for a decent word processor, never mind a fully fledged DTP package.

More importantly, our deal with zzSoft means we are now in a position to offer low cost upgrades from Easy Text Professional to Easy Text Pro Vector and competitive upgrades from any other Atari DTP package. Yes, you can upgrade from ANY package to Easy Text Pro Vector at a discounted rate! Here's a little information about the programs.

Easy Text Professional

Easy Text Professional is an ideal entry level DTP package as it can be run on a floppy based system (but is of course hard drive installable) and requires only 1 Mb of RAM. It is a GDOS based package and comes with an installer program which completely automates the GDOS setup. A selection of fonts are supplied with the package. Easy Text Professional includes a 130+ page fully illustrated printed manual.

Easy Text Pro Vector

Easy Text Pro Vector is for those of you with more system resources to spare. It requires at least 2 Mb of RAM and a hard drive is strongly recommended. You can work without a hard drive but you'll need to set up a RAM disk and have over 2 Mb of free RAM, so a 4Mb machine is essential if you don't own a hard drive. You will also require SpeedoGDOS v4.xx or v5.xx or you can use NVDI v3.xx or v4.xx as an alternative. Easy Text Pro Vector is functionally identical to its "little brother" with the main exception being that it uses vector fonts to give a much more professional output. In fact the output quality can easily match that of Calamus or Papyrus.

Upgrading From Easy Text Professional

If you have upgraded your system's RAM and purchased a hard drive since buying Easy Text Professional, you may wish to upgrade to Easy Text Pro Vector to take advantage of modern vector font technology. In this case, you must return your three master disks along with the appropriate upgrade fee. Do not return your manual, it is not required. If you do not already own SpeedoGDOS or NVDI, we can offer a bundled deal with SpeedoGDOS v5.7 (see below).

Competitive Upgrade to Easy Text Professional or Pro Vector

Simply send us some sort of proof of ownership of any commmercial DTP package (demo versions and cover disk versions excluded). The only exception to the "commercial" requirement is the Atari World release of Timeworks DTP. Acceptable proof of purchase is a sales receipt, a master disk or a photocopy of the front page of your manual. We don't want the whole package or even the whole manual (don't waste postage sending heavy items!), just something that proves you own a legitimate copy of a competing product. If you send in a master disk as proof of purchase, it will be returned to you with your order.

SpeedoGDOS Bundling Deal

If you are thinking of purchasing Easy Text Pro Vector and do not currently own SpeedoGDOS or NVDI (v3 or later), we can include a copy of SpeedoGDOS v5.7 at the special price of just 20 pounds (49.95 pounds when purchased separately) in addition to the cost of Easy Text Pro Vector. This offer also applies when upgrading (from any product) to Easy Text Pro Vector. Please note this price is only available if SpeedoGDOS is purchased at the same time as Easy Text Pro Vector.

Pricing

Easy Text Professional 19.95 pounds + P&P (UK Free, Europe 3 pounds, ROW 5 pounds)

Easy Text Pro Vector 19.95 pounds + P&P (UK Free, Europe 3 pounds, ROW 5 pounds)

Upgrade from Pro to Pro Vector 6.50 pounds + P&P (UK 1 pound, Europe 2 pounds, ROW 3 pounds)

Competitive Upgrade to either package 14.00 pounds + P&P (UK 1 pound, Europe 3 pounds, ROW 5 pounds)

Easy Text Pro Vector bundled with SpeedoGDOS 39.95 + P&P (UK 2 pounds, Europe 3 pounds, ROW 5 pounds)

Easy Text Pro to Pro Vector upgrade with SpeedoGDOS 26.50 pounds + P&P (UK 1 pound, Europe 3.00, ROW 5.00)

Competitive upgrade to Easy Text Pro Vector with SpeedoGDOS 32.50 + P&P (UK 2 pounds, Europe 3 pounds, ROW 5 pounds)

The only Atari user group that I knew of from down in L.A. seems to
have gone the way of the T-Rex. Can't find hide nor hair of them.
Plus on my budget, going down there is a once a year deal if at all.
After I pay my rent,phone, and some other bills, I'm lucky to have
$125 left to spend for my monthy supply of food, much less gas for
my old car. It's not seen a 1/2 tank of gas in 6 months.

If I can get this system set up sometime during the next month or 3,
then I can maybe drop CIS and go with q-net the local ISP, that
is if they have a local number for Rosamond or north lancaster.

I don't know about Line Audio but Computer Direct is now
http://www.digital-arts.com or www.digital-arts.ca for Atari its
www.digital-arts.ca/atari

Chris owns the English rights to DA's Layout and is trying to get a small
piece of the Mac DTP market. He is still handling the 060 clones, SoundPool,
translations of some very nice Calamus modules.

I don't think that's possible either. An Apple //GS is less powerful than
an Atari ST, and there are no emulators that I've heard of. If there were
any, they would be so slow you couldn't run anything.

I think we have to be careful not to confuse the terms. There are Ultra
SCSI drives and Ultra DMA IDE drives. I was referring to Ultra SCSI
drives. These work well with the Atari like any other SCSI drive.
Ultra DMA IDE drives also work.

In a few days HDDRIVER 7.5 will be released. The SCSI Driver interface
in this new version besides real SCSI drives also supports ATAPI
devices. This means that any software that is based on this interface
(e. g. SPIN!) will also work with ATAPI devices, especially CDROM
drives, connected to the IDE port.

>anyone familiar with the WordPlus file format and would be willing to
>share this information so that I could write a converter?

Years ago I wrote microEMACs macros to create WordPlus files out of huge ASCII files (it sure beat doing things manually). WordPlus uses simple escape sequences to denote formatting attributes (bold, italic, etc.). I don't use microEMACs anymore, preferring PKS-Write or qed instead for macro work. Here's the codes:

Bold 27 129
Italic 27 132
Bold Italic 27 133
Superscript 27 144
Subscript 27 160
Light 27 130

All attributes have to end with 27 128, except 'normal' text which doesn't use an escape sequence. And normal spaces (32) have to be replaced with ASCII 30.

This doesn't contain all the escape sequences WordPlus uses, though (only the ones I needed at the time). Afterwards, a simple WordPlus header was merged at the beginning of the file. But to go from WordPlus to HTML, all you'll need to do is search and replace these characters, unless there's already an Atari program that handles such conversions. Writing one is a great idea.

Even if SoftPC can run Windows3.1 fast enough to run a web browser, I have the feeling that the whole setup would be really too slow to run any Java application.

Java is already very slooooow on my K6/200. I seriously doubt a Falcon emulating a PC would get any better that 286 performance.

I would like to add that I personally never used JPEG<->GIF
conversion facilities of IJG or other software, due to GIF's
limitations and inability to represent photo images properly.
See the JPEG FAQ at http://www.faqs.org/faqs/jpeg-faq/ for
detailed discussion.

I guess that more people will realize GIF's limitations in
the future, and PNG will eventually rule out GIF.

So, it's not worth bothering about GIF support anyway. The
time is better spent for support of more reasonable formats
like PNG.

Regards,
Guido

Sorry Charles but Opera doesn't support Java yet. It is expected for
version 4 though.

>It only depends from the version number of MagiC which must be at
>least 3.0.

It does not only depend of the MagiC version because when I use Cab
with Geneva and having run Wdialog before, the icons are not the right
one ... in 256 colors CAB uses the 4 colors one :(... Alexander had no
explanation about that ... except that Wdialog doesn't seem to like my
graphic card :(...
In the french magazine, I also saw different CAB snapshots
taken from an Hades in highcolor, and guess what ? the icons where
also not right displayed ! Only 4 colors icons !

It doesn't exist a worplus -> html converter but you can find on the
umich ftp site (ftp://atari.archive.umich.edu) a wordplus -> rtf
converter (Applications/Wordproc/1wp2rtf.zoo) and a rtf -> html
converter (Network/Www/rtftohtml.tgz)

Their homepage isn't up to date. The CT2 hasn't been released yet, and its specs has been modified, so that they can make it more affordable. In fact, there will be a 50 Mhz CPU, DSP, VIDEL, and 32 bits Fast-RAM bus.
I phoned them recently, and I think we'll be able to purchase the CT2 before next summer, but I can't say more... :-(I'm also waiting for it...

6566. YAC Auction Results

Newsgroup: comp.sys.atari.st
Date: 1998-03-31 00:00:00 UTC
From: ekaljumagi@clhs.lake.k12.ca.us
Message-ID: <6frijq$854$1@nnrp1.dejanews.com>
Source record: 104213

YAC Auction Final Results

The first YAC auction is at an end. All winners should email me at e.kaljumagi1@genie.com with their choice of shipping as follows:

1) Request UPS C.O.D. ground. Shipping and C.O.D. charges will be added to the purchase price.
2) Request personal pickup. No shipping charges will be added and you can pay when you come visit us in Davis.
3) Request UPS or USPS ground shipping by sending the bid plus $20US for shipping to P.O. Box 82//Lower Lake, CA 95457. Checks should be made out to Eric Kaljumagi. A refund or bill to make up for actual shipping costs will be sent within a week of the product shipping.

Thank you for supporting the Yolo Atari Club. The proceeds will go a long way towards funding our club activities, including our bimonthly newsletter, which is sent out under our cost. If you would like to subscribe to Yackity-YAC, please send me an email -- only $8 per year.

Notice: Eric Hays (redvine@maxo.com) will be doing the shipping. Since he has to go back to work soon, we may have trouble with timely delivery if we do not ship within the next couple of weeks. Please do not delay!

Although I agree with Eric that this newsgroup is an appropriate place for an
auction -- every other day does seem a bit excessive. Perhaps a weekly post
with a web page that has current bids?

As a high school teacher, I can assure you that I have a fairly large cursing lexicon (which, since you asked, is never used -- well, hardly ever).

Personally, I consider restraint to be a sign of respect between adults. For example, Peter's work for the Atari has helped me greatly, and I am indebted to him. But this respect for his assistance could be needlessly turned to annoyance simply because of a few misplaced words not even directed to me. I'm not sure exactly why profanity annoys me so, but it does.

I run CAB 2.5 on a NOVA card -- the CAB icons have more than four colors (about ten, depending on which colors are actually counted). But if I run in truecolor modes, the icons have different (incorrect) colors. They look 'right' in 256-color mode, regardless if wdialog is resident or not, though. Besides the standard system colors in the icons, CAB uses others in the Netscape-safe range (like 102 102 000, 000 102 000, 000 102 102, 102 102 102, and 204 204 204). You're probably not getting these ones if all you see is four because CAB uses palette entries #0 to #15 for the icons.

Check your system palette, either through an accessory or cpx, and see if color entries #9 to #15 have these aforementioned Netscape colors. But in truecolor modes, palette entries #9 to #15 are nowhere near what they are in 256-color mode (hence incorrect colors are shown in CAB's icons). CAB

alters the system palette differently, depending on the video mode and what VDI is being used. In truecolor modes, CAB doesn't change the system palette (the video mode's default is used). Here's what I get:

256 mode: 32k mode: 16.7M mode:

0 000 255 000 same same
1 000 000 000 same same
2 255 000 000 same same
3 000 255 000 same same
4 000 000 255 same same
5 000 255 255 same same
6 255 255 000 same same
7 255 000 255 same same
8 204 204 204 206 206 206 191 191 191
9 102 102 102 033 033 033 128 128 128
10 102 000 000 033 000 000 255 128 128
11 000 102 000 000 033 000 128 255 128
12 000 000 102 000 000 033 128 128 255
13 000 102 102 000 033 033 128 255 255
14 102 102 000 033 033 000 255 255 128
15 102 000 102 033 000 033 255 128 255

Your results may vary <g>.

NT supports PPP and Slip and so does STiNG.. Configure them both not
to worry about carrier signals, etc.
Give them both fixed IP addresses, as neither can allocate one to each
other (these can be random)
That should work...
Caution, though. Give all addresses as IP addresses (that you've just
set) as there will be no DNS server in the little mini-internet you will
have created.

Hope that's of service.

Write to me and ask if not.

Hi, I've seen some posts on maus.f030 news group something about
ELITE 3 on the Falcon

Can someone confirm this as it sounds pretty good!

>102 102 102, and 204 204 204). You're probably not getting these ones if
>all you see is four because CAB uses palette entries #0 to #15 for the
>icons.
>
>Check your system palette

Neil, I will try to explain further: my problem is not a palette
related one.
Look at the CAB.RSC and you will see the icons strip does exist in two
versions ... the full colored one which is what you were talking about
(FORM26 in CAB 2.5 RSC) and the 4 colors like one (FORM 33 in CAB 2.5
RSC)... this latest is intended to be used under less colored systems
not with the resolutions I use.
Nevertheless this is not the CAB fault because when running cab
without having run Wdialog, there is no icon problem ...
It's only a Wdialog related problem ...

Terry May wrote:
>
> How does PNG compare to the GIF

It's more powerful than GIF (see the given PNG homepage),
except that it doesn't support the (poor anyway) multi-image/
animation mode of GIF. The PNG group considers this as no
disadvantage, though, since multi-image/animation support
is subject to a dedicated format (MNG).

> and JPG formats?

PNG complements JPEG for lossless and artwork applications.
The exercise is to choose the right format for your purpose.

Hmmm, don't have a clue. You _should_ have 19,200 on a stock STacy. How do
you know you are only at 4800?

> i would like to increase the memory to 4 meg there are two 30 pin sip

My STacy has a blue upgrade board to allow SIMMS, which I use. It is so tight
in the darn thing that I rather doubt adapters will work.
>
> finaly is swoping the internal 20 meg {ha} hd a straitforward job ?

Swapping the HD is straightforward, but you have lots of little cables
everywhere -- don't forget to go in through the monitor (I'm NOT kidding).
Unfortunately, the HD MUST conform to the SCSI I protocol -- the Atari SCSI
board can't handle SCSI II.

If I recall correctly, it was TOS 1.4 that enabled DOS compatibility. As far
as I can tell from personal experience, DOS 3.3, Win 95, Mac OS 7.1, Mac OS 8,
and all varieties of TOS enjoy TOS 1.62 formatted floppies (just don't do
anything strange, like 82 tracks).

6591. Help! Linking a CD-ROM to my STE:(

Newsgroup: comp.sys.atari.st
Date: 1998-03-31 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <891384569.6321.0.nnrp-01.c1ed1184@news.demon.co.uk>
Source record: 104238
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st,comp.sys.atari.st.tech

I am having a problem gettings an external SCSI CD-ROM drive (Apple 300E) running on my STE.

My setup is as follows:
4 meg STE running under TOS 1.62 & 2.06 (not at the same time:))
System solutions MiniS Hard drive.
Using the adapter that was supplied with it in 1994, SS say it's an ICD.

HDdriver v3.10 will not allow any drive to initialise, let alone run. The hard drive locks up, no matter what you do.

I have downloaded the HDdriver v71.0 demo with mixed success; in 1.62 & 2.06 if the hard drive doesn't hangup on me (yellow light stuck on), it acknowledges the CD-ROM drives existance, but only allows me to acces partitions C-H instead of C-J on my hard drive. Using MetaDOS v2.70 under 1.62 the computer bombs out when the CD-ROM is opened; in 2.06 I can actually view the directory:) But when any attempt to run any install program etc... the computer crashes.

As I have met with limited success with the demo version of HDdriver 7.10, and as System Solution has failed to convince me that upgrading to the full version would get me sorted I don't want to splash out money on a wild goose chase based on a salesman selling his trade.

Has anyone been through the same problems, if so how was it overcome? I don't mind buying software, on condition that it does what I want it to.

If any dristibutor, producer or writer of these commercial or any driver package could be so kind as to forward me a copy of their software and it does the job I want (which is to get this CD-ROM drive so that I can use it) I can't see a problem with me buying it. simple enough.

Any help will be greatly appreciated, and I mean that, I really do, I'm not kidding, It'll make my day, or millenium, I'll be forever in your debt, I'll definitely owe you a favour, and I mean that most sincerely folks..... :))))))

Thanks

Cheers! for now
Steve

6592. FS: Atari 1040STe System

Newsgroup: comp.sys.atari.st
Date: 1998-03-31 00:00:00 UTC
From: demidem@aol.com
Message-ID: <1998033122000300.RAA28747@ladder01.news.aol.com>
Source record: 104239

After long debate, I have decided I need the money and I have to sell my Atari
ST.
What I am selling is as follows:

Atari 1040STe with TOS 2.06 and 2MB RAM
SC1435 Color Monitor
SM147 Monochrome Monitor (I have the video switcher for these two monitors)
90MB External SCSI Hard Drive

Additionally, the software with this system includes:
Silhouette, Word Writer ST,
1st Word Plus, Pagestream
MultiDesk Deluxe, XBoot
Warp9, Stereo Master
Risk, Dungeon Master
Space Crusade, Empire
and dozens of other titles.

Almost all of these items have their original boxes and original manuals.
These items are all in excellent condition. I am looking for offers in the
$350 range, but I am willing to entertain offers.
I can be contacted at home: 609-396-8536
or by e-mail: demidem@aol.com
Aaron

This drive is an IDE drive for which the new IDE adaptor from TUS is
required, UDMA is not a SCSI protocol. This drive is probably as fast as
a lot of SCSI drive's though.

You may find that the power supply has been removed and when reinstalled
has stuffed up a regulator for the audio output on the maainboard. Have
a look but be careful as doing just this is very easy (I found out the
hard way). Replace the reg. and of you go.

g> seems to be no good alternative if the code is to be freely distributed.

> Hmmm...I thought they didn't care about freeware programs using their patent.

That was what they were saying a couple of years ago; on the strength of
which there was still GIF code in IJG v6a. They've changed their tune.
The current party line at Unisys is intended to force freeware GIF
implementations out of the picture altogether. My understanding of
Unisys's current claims is:

(a) freeware distributions are subject to royalty payments
(apparently, a percentage of zero is more than zero in Unisys-land).

(b) if someone uses an IJG-derived GIF codec in a commercial or shareware
program, and omits to pay royalties on it, Unisys reserves the right
to sue *me*. For aiding and abetting infringement, or something like
that.

My attitude is: the hell with them. If Unisys doesn't want there to be
any free implementations of GIF, fine. There won't be. We'll see who
needs who more, over the long term.

Something that didn't quite make it into IJG v6b, but should be there
in the next release, is conversion to and from PNG. I encourage you to
consider PNG as a replacement for GIF. See http://www.cdrom.com/pub/png/

Dennis,

try operasoftware.com. There are four download sites for NA. The two ftp sites are:

1) West Coast - ftp.revol.com/opera/windows/english/032e32.exe

2) East Coast (Indianoplis) ftp.ind.net/pub/browsers/opera/032e32.exe

I would really recommend this browser for anyone with a PC. It is fast, compact and complies with HTML guidelines. In fact the company I work for, Fuji Photofilm, is looking into using it company wide. Like CAB 2.X it is very good for Web site authoring because of the HTML complience.

As has been said, anyone who has email access can surf the web (extremely slowly!) and fetch files by ftp from an ftp-by-email server.

(Probably doesn't include folk who access the internet via a gateway such as a BBS.)

If you think the DIAL.SCR is too difficult to edit yourself, you can allways use the STiNG dialer to help create the script. I used this method to set up my DIAL.SCR for use with Zetnet.

Also, I think there is an example Compuserve script within the STiNG archive.

Hi,

I'm looking for a way to convert a bunch of WordPlus files into HTML
format. Is there a converter program I could use? Alternatively, is
anyone familiar with the WordPlus file format and would be willing to
share this information so that I could write a converter?

Thanks,

Claus

Well if you like to pay for none existing products go ahead. They have
promoted the Centurbo 2 for several years now (I have lost count). I
guess they still havn't managed to get it working and still havn't come
to their sences as Wizztronics did after a couple of years and scrap it.

It can't be that hard to do such a accelerator as the Might Sonic were
released years ago (4 or 5 years?) and the AB040 something like 3 years ago
and both works just fine. But then you also have to have the knowledge
which they apparently doesn't have. Maybe someone should give them
a Mighty Sonic and let them reverse engineer it? Or even better, why
didn't they just license it?

Well, I agree they are still developing this Centurbo2 card, but it has
been announced as "imminent" for over 2 years. Same goes for the Phenix
clone.

The desktop formatter became DOS compatible with TOS 1.4 so your STe will
format MS-DOS compatible disks. However, for simplification, as the
original poster didn't say what TOS he was using, I said that it's better
to format on the PC.
